THE LIFE OF JESSE W. FELL

BY

FRANCES MILTON I. MOREHOUSE, A.M.

High School Supervisor in Social Sciences,
Illinois State Normal University.

PRICE 60 CENTS

PUBLISHED BY THE UNIVERSITY OF ILLINOIS
URBANA

[Entered as second class matter, July 27, 1915, at the post office at Urbana,
Illinois, under the Act of August 24, 1912.]

UNIVERSITY OF ILLINOIS STUDIES IN THE SOCIAL SCIENCES

The "University of Illinois Studies in the Social Sciences" are designed to afford a means of publishing monographs prepared by members of the faculty or graduate students in the departments of history, economics, political science, and sociology in the University of Illinois. Numbers are published quarterly, and constitute an annual volume of about 600 pages. The subscription price is three dollars per year.

Vol. I, 1912.

- Nos. 1 and 2. Financial history of Ohio. By E. L. Bogart. \$1.80.
No. 3. Sources of municipal revenues in Illinois. By L. D. Upson. *Out of print.*
No. 4. Friedrich Gentz: an opponent of the French Revolution and Napoleon. By P. F. Reiff. *Out of print.*

Vol. II, 1913.

- No. 1. Taxation of corporations in Illinois, other than railroads, since 1872. By J. R. Moore. 55 cts.
Nos. 2 and 3. The West in the diplomatic negotiations of the American Revolution. By P. C. Phillips. \$1.25.
No. 4. The development of banking in Illinois, 1817-1863. By G. W. Dowrie. *Out of print.*

Vol. III, 1914.

- Nos. 1 and 2. The history of the general property tax in Illinois. By R. M. Haig. \$1.25.
No. 3. The Scandinavian element in the United States. By K. C. Babcock. *Out of print.*
No. 4. Church and state in Massachusetts, 1691-1740. By Susan M. Reed. \$1.05.

Vol. IV, 1915.

- No. 1. The Illinois Whigs before 1846. By C. M. Thompson. 95 cts.
No. 2. The defeat of Varus and the German frontier policy of Augustus. By W. A. Oldfather and H. V. Canter. 75 cts.
Nos. 3 and 4. The history of the Illinois Central railroad to 1870. By H. G. Brownson. \$1.25.

Vol. V, 1916.

- No. 1. The enforcement of international law through municipal law in the United States. By Philip Quincy Wright. \$1.25.
No. 2. The life of Jesse W. Fell. By Frances M. Morehouse. 60 cts.
No. 3. Land tenure in the United States with special reference to Illinois. By Charles L. Stewart. (*In press.*)

The Life of Jesse W. Fell

FRANCES MILTON I. MOREHOUSE, A.M.

FOREWORD

There are few men in any generation who see their lives in relation to the accomplishment of that generation. Few realize, altho all profess to believe, that appraisal of worth must be according to the proportion of a man's part in the advance of his day; and that all honors and distinctions fall away from men when they stand before the bar of years, to be judged in the stark light of truth as to character and service. All men acknowledge this true, but the men are rare indeed who apply it to their own lives, and make it the basis of their individual schedule of values. Many men assert the immortality of the soul, but few can conceive themselves in any scheme of time which transcends the limits of their own lives; or content themselves to labor without reward, because they believe that in the fulness of time all souls must find full compensation.

In writing the story of a man whose part in the life of his generation might in itself bring him some meed of remembrance, I am nevertheless most anxious that his rare quality of indifference to such rewards as men might give, of steadfastness to ideals not generally held in his day, of faith in ultimate things, should stand out as the true reason for his being brought as fully as possible before men. Here was one who steadily ignored or refused honor and fame, who despised no quiet and unrecognized labor, who was not turned aside from his steady aim by the pressure of circumstance; in short, whose belief in the future was interpreted in all the doings of his busy life. This is the sufficient reason for writing a life of Jesse W. Fell.

FRANCES M. MOREHOUSE.

XI. The Tree Planter.....	106-111
XII. Last Years.....	112-118
Bibliography	119-121
Index	123

CHAPTER I

EARLY YEARS, 1808-1836

The Fell farm in New Garden Township, Chester County, Pennsylvania, lay mainly upon a high ridge, which was known by the Indian name of Toughkenamon, or Fire Brand Hill. It is a region rich in historical associations, not far from Brandywine battlefield. The house was built of stone, and in later years was remodeled into a handsome country residence. Here Jesse W. Fell was born, November 10, 1808. His parents were Friends, of ancient and honorable English lineage, but of limited means and simple tastes. His father was a hatter, his mother a preacher of the Hicksites. Because he had much skill in song, his father, when he later united with the Methodists, became a choir leader; and he sometimes turned his resonant speaking voice to account in crying sales. There was a large family; Jesse, named for his father, was the third child.

When he was eight years old, the family moved to another town in New Britain Township, and subsequently to Downingtown. In the country Jesse attended, with his brothers and sisters, the neighborhood subscription schools maintained among the Friends of Pennsylvania; for there were then no public schools in the state. These schools, within the limited scope of their courses of study, were usually good, and the Fell children received a solid foundation in the elementary subjects. The elder brothers were apprenticed, upon reaching the proper age, to a blacksmith and a wheelwright respectively. As Jesse was not a robust lad, the parents and other relatives thought it best to apprentice him to a tailor, and cast about for a skilful master who might teach him this trade. But the boy himself objected so strenuously that the plan was abandoned. He "would learn a better business," he declared; and his parents, not wishing to coerce him, waited for some definite talent or liking to appear, which might guide their son in deciding upon his vocation. As yet the boy had no plan, save that of becoming wiser than he was. He wanted to go to some school that would teach him more than the country subscription schools offered.

Joshua Hoopes conducted a boarding school for boys in Downingtown at the time, which was the best school in that part of Pennsylvania. It was remarkable in that, at a time when the classics formed the core of instruction in almost all secondary schools, it emphasized the natural sciences. The master was an enthusiastic botanist, a popular lecturer on astronomy, and sufficiently adept at mathematics to win the admiration of his community. These subjects he had mastered by dint of systematic application of his really brilliant mind to printed treatises, and by giving rein to an originality which the higher schools of those days did not greatly encourage. Free from the traditions of schools, this village schoolmaster gave to his boys a type of education destined to become popular afterward, but in other places practically unknown to his own day. He taught of plants and animals, of husbandry and astronomy, of literature and mathematics, with a wealth of practical application which linked books with life and study with pleasure.

Jesse Fell wanted to attend this school but lacked funds. He applied for admission, however, offering to pay for his tuition by any kind of work that he could do. An arrangement was made by which Jesse was to work in the master's kitchen-garden and help about the house in return for his board and tuition. The work was hard, but not unpleasant. His master introduced him to the joy of intelligent gardening, took him for long tramps in the woods, and allowed him the freedom of his library. The books were a mine of riches to the boy, and Joshua Hoopes' enthusiastic love of plant life stirred to response a kindred feeling in the heart of his pupil. There grew out of this pleasant period in the life of the boy that love of trees which, in the man grown, was to give so richly to the prairies of the West.¹

That West continually called him. The idea of going into the new country beyond the mountains grew in him during the two years of his stay at Joshua Hoopes' school. When he had finished the course of study, Friend Hoopes wished him to enter into a partnership with him in a vineyard enterprise which he was then planning. Jesse Fell declined, not being willing to relinquish his dreams of a larger career in a new country; and Friend Hoopes abandoned the scheme "for want of a suitable partner." To further his plan of going west, Fell taught school for a period of about two years, from 1826 to 1828. The schools

¹Richard Edwards, *Jesse W. Fell*, 3.

he taught were near his home, at Buckingham, Colerain, Brown's, and Little Britain. As he understood surveying and other branches of higher mathematics, he was able to command a higher salary than the customary one of two dollars per quarter in cash. In the intervals of teaching he "kept store" for Issachar Price of Callaghersville, while that country merchant was away crying sales; and in all his spare time he was reading diligently.

The two years of teaching were a time of growth and development for the slim, blue-eyed Quaker boy. He tested his powers, enlarged his knowledge, broadened his interests. Altho he later considered himself "but an indifferent pedagogue," he was thought very efficient by those who employed him, except at Colerain. This was an extremely rigid Presbyterian community, with a school in which the New Testament had been the sole text in reading for a long time. Mr. Fell suggested that his pupils bring other books that the reading might be varied, whereupon he was denounced from the local pulpit as a Hick-site who had "expelled the Bible from his school." Without denying the first part of this charge, which was true, Jesse Fell asked that the second accusation might be inquired into officially, and when it was repeated without investigation, he closed the school, very hurt and very indignant.

It was while teaching that he had his first great lesson in the uses of force and diplomacy. A school bully, larger than himself, had defied him and had been whipped. After the whipping he administered a lecture, so tinctured with kindness and well-directed flattery—"what all men like if skilfully applied," said Mr. Fell in telling afterward of this experience—that the boy resolved to reform his ways. He became later a Methodist Episcopal minister of fine character and widespread influence.

At this time, also, Fell began to speak in public, and especially to debate whenever opportunity offered. At the little country school-houses there were held political debates, as well as other neighborhood meetings; and at these debates Fell, when he was only seventeen years of age, made for himself a name as a speaker, particularly upon the tariff, that subject so dear to the Pennsylvanian.²

²The principal source of information for Fell's early life is the unfinished manuscript biography begun by Richard Edwards from notes dictated by Mr. Fell, and already noted. It is among the *Fell MSS.*, as are all papers, not otherwise placed, in the following pages.

In the fall of 1828, having saved a little money and borrowed more from his brother Joshua, Jesse Fell started for the West. He was twenty years of age, still slight and rather frail in physique, and unacquainted with the world. He was going to seek his fortune in an unknown country, with no definite trade or profession as an asset. His family, with a helpful confidence in his ability to do what he wished to do, bade him godspeed. He spent the last night before starting for the West with a dear friend, R. Henry Carter, with whom he talked far into the night, of old days and days to come. In the morning he set out for Pittsburg. A young man by the name of Drummond, from Washington, started with him, but soon became discouraged and returned to his home.³

This first stage of the journey was accomplished on foot, except for a few miles at the end, when, very footsore, Fell wavered in his resolve not to spend his money until he was started upon the farther pilgrimage. He entered Pittsburg upon the deck of a little canal boat. This city was then the clearing house of all western enterprise, the gateway to the new land, and a center for securing employment. Here Jesse Fell met a Mr. Reese, who employed him as a book agent. He was to take orders for Malte Brun's *Geography*, Rollin's *Ancient History*, Josephus' works, and one other book, the name of which Mr. Fell afterward forgot. Armed with this means of defraying expenses, he boarded a steamer for Wheeling, where he soon fell in with a certain Mr. Howell, the publisher of the *Eclectic Observer*. Mr. Howell conceived a fancy for the young Quaker, and wished to interest him in his paper. This was a journal of protest against slavery, capital punishment, and any other institution which, in the eyes of the editor, deserved censure. Jesse Fell again decided against the half-gods; he was bound for the newer and greater West.

While canvassing Wheeling, however, he found time to write his first contribution to a periodical. The subject was one upon which he had often grown eloquent in the country school debates of Chester County: "The Abolition of Imprisonment for Debt." Howell was delighted with its force and fervor. Here was material worth the working—what an abolitionist he

³R. Henry Carter to E. J. Lewis, Mar. 8, 1887. Grace Hurwood to Fannie Fell, Mar. 16, 1913. The latter includes notes of facts related to Miss Hurwood by Mr. Fell. Franklin Price in the *Fell Memorial* (MS.), 9-10.

would make! He offered him an assistant editorship. But Fell declined, and went on with his own plans. They carried him, with his books, over the National Road, opened at that time as far as Zanesville. He met interesting people on the road, notably the Honorable Benjamin Ruggles, United States senator from Ohio from 1815 to 1833.

But the people along the National Road, being busily engaged in making homes in the wilderness, had no great thirst for Josephus and Rollin. Mr. Fell perceived that the business of selling books would give him no very speedy or considerable help in winning his way to the West. An illness took his small savings. Consequently, as the winter of 1829-30 drew near, he made his way back to Wheeling, where he spent the cold months in Mr. Howell's office, setting type, writing for the *Eclectic Observer*, and learning the tricks of a literary trade. At this time he asked his father for money to invest in a part interest in the *Amulet*, for which he had been agent. Very fortunately, as he himself said afterward, his father was not able to help him at that time, and the idea of this partnership was given up.

When the spring returned, he set off again with his books under his arm, up the Ohio and toward the north, through the counties of Jefferson and Columbiana (where were people of his own religious faith, upon whose friendly interest he might confidently depend), and back to Pittsburg, the headquarters of his book house. Throughout the journey he had kept a notebook, which was later lost. The uncertain fortunes of a traveling agent, his illness of the year before, and the knowledge of the world which his experience was giving him, crystallized what had before been but a vague ambition into a settled determination. He would prepare himself for a profession, which in those days even more generally than at the present time, led to honor, influence and power. He would be a lawyer.⁴

With this resolution in mind, but with his agent's paraphernalia still in hand, he turned his face westward again in the spring of 1830. He had gone as far as Steubenville when the event occurred which was to prove the means of accomplishing his desire. Walking along the sidewalk with an agent's ready eye for a possible buyer, he espied a young man busily

⁴Elwood Brown to Jesse W. Fell, Dec. 20, 1829. Jesse Fell to Jesse W. Fell, Jan. 16, 1830. Hannah Fell (an aunt) and Rebecca Fell (his mother) to Fell, Feb. 6, 1830.

chopping wood. He looked not averse to good reading, and the agent approached him in the interests of Josephus, Rollin, and Fell. But the woodchopper was as poor as Fell himself, and the two, finding a common interest in their common situation, fell to discussing ways, means, and prospects. The woodchopper was studying law, he said, in the office of a local firm of excellent reputation. He would like to buy books, but needed every cent he could make for bare living expenses. After he had been admitted to the bar, he was to pay for his tuition; and then he would need all surplus funds for his law library. There was a place for one more student with Stokeley and Marsh, and he would introduce Fell to the firm.⁵

Fell soon made arrangements for his law course. He was to pay his way in part by doing office work for the firm, and partly by such odd jobs as he might find to do in that frontier community, where there was usually work for all. His two elder brothers helped him from time to time as their limited means permitted. Stokeley and Marsh soon came to value him very highly, while he regarded both the partners with the greatest affection. About a year after beginning his studies in their office, he made a visit to his old home, and was present at the wedding of his brother Joshua, on January 16, 1831. On the return journey his father brought him as far as Shippensburg, a point some forty miles west of Harrisburg.

For another year the law lessons in the office of Stokeley and Marsh went on. The young men in the office had practice in public speaking, for they were eligible to membership in The Forum, a society whose object was the improvement of its members "in speaking and general culture". Jesse Fell made his first speech before this body upon his old theme of the abolition of imprisonment for debt. The presiding officer, a Mr. Wright, who had been a congressman and was later a judge, praised his speech; and Fell tried again. Mr. Stokeley was a local leader in the ranks of the Whigs, who were at that time actively opposing Jackson. There were innumerable stump

⁵Fell to Jesse Fell, June 26, 1830. The story as told by Edwards implies that the idea of becoming a lawyer did not occur to Fell until the time of his interview with the woodchopper. But a letter to his parents, dated June 6, 1830, indicates that the idea had been with him for some time; while Franklin Price states (*Fell Memorial*, 9) that he had read Blackstone while still in Chester County.

speeches to be made, and Mr. Stokeley gave to Jesse Fell his share in the work. The younger man conceived a great admiration for Henry Clay, which guided his political opinions and activities while Clay lived. A youth working in Trumbull's bookstore, and at that time a Clay enthusiast with the rest, became his friend. This boy was Edwin M. Stanton, afterward secretary of war under Lincoln.

The autumn of 1832, when Jesse Fell was preparing for his bar examination, was an especially busy season. He took these examinations, with three other aspirants, on the first of October, passed them successfully, was admitted, and started on foot for the West about a fortnight later.⁶ It was a somewhat risky enterprise, for the payment of his debts took most of his money, leaving very little for the outfit and for traveling expenses. His family helped him as they could, but this was not much. Mr. Marsh, regretting to lose a youth who gave so great promise, had offered him a partnership if he would stay with him, his own partnership with Mr. Stokeley having recently been dissolved. Again Fell chose to answer the call of the ultimate mission. His plan was to travel through parts of Ohio which he had not yet visited and through Indiana and Illinois. He seems not to have thought of settling at once, as he suggested to his father at the time that he "might return by steamboat from St. Louis, as this may be done with little expense." He seems also to have left with Mr. Marsh the idea of possibly returning to enter into a partnership at a later time.

Traveling on foot through Ohio and Indiana, Mr. Fell came to Eastern Illinois in November, 1832. The presidential election had been held the day before he entered the state. At Danville he met Judge McRoberts, a prominent citizen of those days, who told him of a village then but lately founded, named Bloomington. Its location Judge McRoberts thought good; it was a "coming" town. In Decatur, the next considerable place which Fell visited, this report of Bloomington was repeated. At Jacksonville, Judges Lockwood and Smith made out for him his certificate of admission to the bar of Illinois.⁷

In Springfield Fell was to talk to John T. Stuart, to whom he had letters of introduction, and whose advice he wished be-

⁶Certificate of admission to Ohio Bar (James Ross Wells, clerk), dated Oct. 13, 1832. Fell to some member of his family, Sept. 23, 1832. Jesse or Rebecca Fell to Fell, Sept. 2, 1832.

⁷Nov. 1, 1832. This certificate is also among the *Fell MSS.*

fore deciding upon a location. At sunset of a warm day in late November, he arrived in the city which was afterward to be the capital of Illinois. John Todd Stuart was sitting before the door of his house when Fell approached, carrying the stout stick and carpet-bag which were his worldly possessions. Many young men so accoutred trod the streets of the new cities of the West in those days, and Stuart with a characteristic friendliness spoke cordially to this newcomer and asked him what he might do for him. Fell answered that he was looking for John T. Stuart, and would like to be directed to his house. Upon learning that he was speaking to Mr. Stuart, Fell produced a letter from one of Stuart's clients in Philadelphia, introducing the Pennsylvanian and asking the favor of advice and help for him. The two men sat down then and there to discuss the question of location and opportunity.⁸

Mr. Stuart spoke especially, as had Fell's previous advisors, of the new county of McLean, lately created by the legislature, and its county seat of Bloomington. It was, he said, a very new town, and he was quite sure that there was no lawyer there as yet. With the quick decision which was one of his characteristics, Fell determined to go at once to Bloomington, and rose to depart. Stuart invited him to stay the night, but so eager was Fell to reach his destination, that he declined the proffered rest and entertainment, and trudged that night many miles on his way to Bloomington. At New Salem, pausing for food and rest, he first heard the name of Abraham Lincoln, when the townspeople told him of the company they had sent to the Black Hawk War. From there he went to Pekin, and then sixteen miles farther to Dillon, since called Delavan, in Tazewell County. Here he stopped to visit at the home of William Brown, members of whose family he had known in Pennsylvania. He was almost without money, but came "carrying a knapsack and feeling as big as King Solomon in all his glory," and full of that buoyancy and faith in the future which made him both representative and leader in his day and place.⁹

William Evans built the first house in Bloomington in 1826. Four years later, on the twenty-fifth of December, 1830, McLean County was created. The first sale of town lots was on July 4,

⁸These facts were related to the writer by Judge James Ewing of Bloomington, Dec. 4, 1912. Mr. Stuart had himself told them to Judge Ewing. See also Fell to David Davis, Dec. 16, 1885.

⁹Joshua Brown to E. J. Lewis, Dec., 1896.

1831. At the close of 1832 the town numbered about one hundred people, while the neighboring settlement of Blooming Grove had fully two hundred and fifty. General Gridley, lately returned from the Black Hawk War, was the leading citizen. When Jesse Fell arrived, William Evans had but lately sold his house to James Allin, who opened a store in it, and laid out the town in lots. There was no resident clergyman at that time, no newspaper, and no lawyer.

Fell's survey of the situation satisfied him that there existed a favorable opening for him, and he returned to Delavan, where William Brown offered him employment for the winter as a tutor to his children. Mr. Brown was the great man of his locality—a man who had glass panes in the windows of his cabin, whose family had “come west” in a carriage, and who employed a teacher to instruct his children. He had brought his family from Pennsylvania in 1828. Later, he became known in central Illinois as “Joseph,” because in a year of crop-failure he had sold his good crop of corn for a dollar a bushel, the normal price of grain in early days in Illinois. People for many miles around came to him for food and seed. His home was a social center. From it the young people started on long rides to lectures or parties at Pekin or at distant farmhouses and settlements. The eldest son, Joshua, was the leading spirit among the younger men. Eliza, the eldest of the sisters, was a girl of rare loveliness and ability, whose early death a few years later brought great sorrow to the whole neighborhood. The children of two other families attended Jesse Fell's classes that winter. In the Brown home he found congenial friends, encouragement, and good counsel, as well as the material help he needed.¹⁰

When the spring came he went back to Bloomington, and opened his office in a small brick building at the northeast corner of Main and Front streets. The small legal library, which Mr. Marsh had agreed to send him when he was located, to be paid for when practice gave him means, arrived during the spring, after a long journey down the Ohio and up the Mississippi and the Illinois to Pekin, whence it was carted overland to Bloomington. Fell boarded with James Allin, who, in addition to his other activities, kept the only inn of that locality, at what came afterward to be known as “the old Stipp place.”

With the growth of population and the inevitable troubles

¹⁰E. M. Prince, “Hester Vernon (Brown) Fell”, in *Historical Encyclopædia of Illinois and History of McLean County*, II, 1024-27.

in adjusting titles and claims to lands, there came legal business in plenty to Bloomington's first lawyer.¹¹ On the second of May, 1833, he made his initial appearance in an Illinois courtroom. This was at the third session of the Circuit Court in McLean County, which sat for three days, and disposed of several cases. Fell was attorney in two of these cases, securing favorable judgment in both by default. At the next session, in September, he had a number of cases, which he managed so well that his position and clientele were henceforth assured.¹²

John T. Stuart continued to be his friend, furnishing him letters of introduction and recommending him to clients. He became known as a good judge of land, and located innumerable farms for his clients, making the entries at the land office in Danville. Before long he began to acquire land for himself, and to exhibit the outward and visible signs of prosperity. He bought

¹¹John T. Stuart told Judge James Ewing that when he attended court in Bloomington six months after Fell had settled there, Fell told him he was worth about \$60,000 above all debts. The statement is manifestly inaccurate, as to the time of the occurrence; but it gives some idea of the rapidity with which fortunes were built up in the prosperous days of the early land-exchange. Fell was "worth \$60,000" in 1837.

The first professional card used by Mr. Fell gives as references the following lawyers: Richard Dorsey, Baltimore; William Dorsey, Richard Sturgeon and Amos Jeans, Philadelphia; William P. Dixon, New York; Willis Hall, Albany, New York; D. B. Leight and Company, Louisville; Hon. John C. Wright and Hon. Samuel Stokeley, Ohio; and Hon. John T. Stuart, Illinois.

¹²The first session of Circuit Court in McLean County was held Sept. 22, 1831, at Mr. Allin's house, but with no docket; at the second, held Sept. 27, 1832, the jury tried one appealed case, dismissed several on the docket, and continued one. Record 1, Circuit Court, McLean County, 1-14. Fell to his parents, Nov. 17, 1833.

An incident related by Fell to Miss Grace Hurwood, and repeated from her notes in the letter of March 16, 1913, referred to elsewhere, goes to show that although a Quaker, Fell was not averse to defending himself in traditional ways. He and another young lawyer became engaged in an altercation in which his opponent accused him of lying. "I told him that would have to be settled outside the courtroom, so when court adjourned, we promptly went out to settle it in the time-honored way. Neither of us gained much advantage over the other, as while he was the stronger, I was the quicker, and we were parted before we could finish. We had fought hard enough however to be willing to shake hands. In the morning we were indicted for fighting 'to the disturbance and alarm of the people'. My defense was that nobody was at all alarmed, much to Lincoln's amusement, and the indictment was quashed."

his first horse, McLean, on which he took those long night rides to Danville, Springfield, Urbana and Vandalia, that soon began to tell sadly upon his health. His restless energy responded to the insistent demands of a growing, changing, developing country. Some prophetic idea of its possibilities, and much boyish eagerness to realize his dreams speedily, urged him to an activity which was the continual wonder of all his friends. He was interested in everything that promised to help the country of his adoption, and developed early that loyalty to Bloomington and McLean county which characterized him in so much that he did.

An instance of this loyalty to Bloomington occurred early in his career. In 1834 an effort was made to take from McLean County its territory west of the third principal meridian, and add it to Tazewell County. This would have made the western boundary line of McLean County scarce eight miles from Bloomington, thus changing its central location to a western one, and so furnishing a possible reason for removing the county seat to another town at some future time. Mr. Fell opposed the movement valiantly from the first. Fearing that its friends might push the measure through the legislature if that body were left unguarded, he spent most of the winter of 1834-35 in Vandalia, where his efforts and influence were such that the project failed of realization. McLean County owes to him, consequently, and to those who worked with him, the distinction of being the largest county in the state.¹³

The winter in Vandalia had results other than the preservation of the territorial integrity of McLean County. John T. Stuart of Springfield and Abraham Lincoln of New Salem were both at that time members of the legislature from Sangamon County. The two men roomed together, and Jesse Fell lived in the same house. These men were very interesting to the easterner, who noted the sharp contrast between Stuart's attractive person and polished manners and Lincoln's big-boned, angular, wrinkled face and direct ways. Stuart introduced Fell to Lincoln, and the two became almost at once great friends, for there was in them a fundamental likeness which transcended all differences of creed, training or destiny. The friendship of the trio lasted to the death of the president in 1865, and was cemented by much mutual service. In 1838, when Stuart was a candidate for Congress against Stephen A. Douglas, both Fell

¹³Fell to David Davis, Dec. 15, 1885. Lewis, *Life*, 3. Lawrence Weldon, "Memorial of Jesse W. Fell" in *Fell Memorial*.

and Lincoln exerted themselves to the utmost to insure his election. Douglas and Fell also, in spite of the vigorous opposition of the latter on this and other occasions, were good friends, serving each other in many ways with the greatest cordiality.¹⁴

Mr. Fell almost immediately, in spite of his youth and inexperience, seems to have become a leading citizen. This was partly due, of course, to the fact that he was Bloomington's first regularly trained and capable lawyer; but it must also have been largely owing to innate qualities of leadership and to that singular charm and adaptability to which many of his generation have borne witness. In 1833, Benjamin Mills wrote to him asking for support for his candidacy to represent the third congressional district in the next Congress. He interested himself in securing a mail route from Bloomington to Springfield, concerning which Governor Joseph Duncan wrote encouragingly in the spring of 1834. He was in requisition for Fourth of July orations, citizens' mass meetings, and debating-clubs. In 1834 he became, by appointment, commissioner of school lands for McLean County. The county records of that and the succeeding year show many mortgages which he drew up with the school money, both for town lots and for farms. The last of these was made in October of 1835.¹⁵

Early in that year the state legislature chartered the State Bank of Illinois, of which Mr. Fell became an agent. This institution consisted of a "parent bank" at Springfield, with branches scattered over the state, and had a capital of one and a half million dollars. During 1835 and 1836 the bank made seventy-seven mortgages in the city and vicinity of Bloomington, to most of which Fell's name is signed as witness to instrument. The bank passed out of existence in February, 1842, having sus-

¹⁴Fell to Lincoln, July 20, 1838. Lincoln to Fell, undated, about July 25, 1838. Douglas to Fell, March 21, 1844.

¹⁵School money in Illinois was at this time unappropriated to its ultimate use. Benjamin Mills to Fell, Feb. 22, 1833. (Mills was opposed in this election by W. L. May, another personal friend of Fell.) Joseph Duncan to Fell, Apr. 4, 1834. The manuscript of a Fourth of July oration, delivered in 1833 or 1834, is interesting in that it contains, besides the usual congratulatory and patriotic sentiments, a strong plea for free public schools. Fell delivered this same oration again in Clinton many years later, at which time he noted the presence of two or three Revolutionary soldiers.

pended specie payment in May, 1837, with its bills at fifteen per cent discount.¹⁶

The records of these and other enterprises show that by 1840 Fell had become a man of position and prominence in Central Illinois. He was known chiefly for his dealings in real estate, and of these it is meet to speak more fully.

Col.* VII); Ford, *History of Illinois*, 191 ff.

CHAPTER II

BUSINESS VENTURES AND HOME LIFE, 1834-1856

The preëemption law of 1830, practically reënacted in 1834, provided that when two men settled on the same quarter-section of government land, each of them might preëempt an additional eighty acres anywhere in the same land district.¹ These claims were called "floats." Many poor men were induced by capitalists to lend their names for floats, later to sell the claims so acquired for enough to pay for the land they lived on. In this way many hard-pressed pioneers were enabled to gain a title to their farms, while such land-buyers as were shrewd enough and had the requisite ready money, secured much fine land in Illinois during the '30's. Mr. Fell, who first visited the village of Chicago late in 1833, afterward remarked to friends that land in that locality might be secured in this way, and that it would be a paying investment, as a great city would eventually stand on the lake-front at that point. His friends laughed at him, as much of the land for which he prophesied immense future values was covered with water during most of the year.

But one man in Bloomington, William Durley, declared that he believed Fell right in his estimate of Chicago's future, and loaned him money for real-estate operations there. He demanded a high rate of interest as compensation, or if he preferred it when the time of settlement came, half of the land. With this money Fell secured four floats in the fall of 1834, the land being within the limits of the present city. When the notes were due, Mr. Durley chose half the land as his share. Part of the two "eighties" which came to him, Fell laid out in town lots.² The rest of the land he sold to David Davis, Dr. John An-

¹21st Cong. Sess. I., *Acts of the United States*, Chap. 209, § 2. (May 29, 1830.) 23rd Cong. Sess. I., *Acts of the United States*, Chap. 54, §§ 2-3. (June 19, 1834.) Treat, *The National Land System, 1785-1820*, 306, 386. Fell to his parents, Nov. 17, 1833.

²Lewis states (*Life*, 26) that they comprised "Fell's addition to Canalport". The property lies between 26th and 31st streets, and west of the tracks of the former Pittsburg, Fort Wayne and Chicago R. R. (now part of the Pennsylvania System).

derson, James Allin, M. L. Covell and O. Covell for eight thousand dollars, taking their notes for the amount. After the crash of 1837 he took back the land and surrendered the notes at the earnest entreaty of the purchasers. His purpose was to hold the land for the advance which he knew would follow when better times had restored confidence. But altho he held out against the storm longer than many, his liabilities were such finally that he had to sacrifice even this resource. He mortgaged the "eighties" for eight hundred dollars each, the mortgages being foreclosed by David Davis and others.³

While he owned land in and around Milwaukee, Fell was much interested in the development of that city and of the state of Wisconsin. Governor John Reynolds, writing to him from Washington in 1836, sent the pleasant news of assured federal aid for a lighthouse in Milwaukee harbor, a survey of the harbor, and a "road to start from that point running west to the Mississippi." William L. May, having been elected to the National House of Representatives, attempted at Fell's earnest solicitation to secure a post-office at Chippewa, but failed, because Chippewa was then still in the Indian country. Fell owned lands "up the river from Cassville" in Wisconsin, in 1837, and made an inspecting tour among the Indians in "the pine country" in the autumn of that year.⁴

But these operations in real estate in places far distant from his own home, were insignificant when compared with Fell's part in the development of Central Illinois. Gaining a reputation as a judge of land in connection with his business of locating tracts for settlement and investment, and becoming thoroly acquainted with the topography of the country and with land values, through his work of loaning school funds and State Bank funds, he entered early into extensive operations in Illinois lands for himself and others. He had great faith in land. When a boy, spending unhappy hours picking the stones from the rocky farm in Pennsylvania, he had dreamed of the prairie, and

³Lewis, *Life*, 25-27. Fell was at this time unable to borrow money of Eastern capitalists, while Davis had friends from whom he secured the funds. William L. May to Fell, Feb. 28, 1838.

⁴John Reynolds to Fell, June 28 and July 6, 1836. (Reynolds was financially interested in the lands dealt in by Durley and Fell.) Fell to Hester Vernon Brown, July 30, 1837: "from the Plain River, Cook County, Wisconsin." Fell to Wm. Brown, Aug. 24, 1837.

wished that he might own farms in the land where, travelers said, there were no stones in the fields. He was in a position, during those halcyon years between his arrival in Illinois and the great panic of 1837, to satisfy this early ambition. He did so on a scale which only the low land values and the easy speculation of the day made possible. He was one of a generation of men of large faith and far vision, who believed in their states, who foresaw the empire of the West that was to be, and who supported their faith by generous investments. There were, besides men of such a stripe, any number of mere adventurers, wildeat speculators, who also contributed to the false feeling of security and prosperity that preceded the panic of 1837. The General Assembly, in 1836 and 1837, entered into an ambitious series of internal improvements, which while it saddled the state with a debt of more than fourteen million dollars, was nevertheless a strong stimulant to progress. The period was one of rapid development. Merely to have been upon the market, to have been bought and sold, to have a price, gave value and prominence to the western lands and to western enterprise. When in addition to this towns were founded and eastern people settled upon the prairie farms, when mail routes and railroads were projected and built across the wastes that separated the frontier cities, when schools and churches and shops gave to western life an approximation of conditions "back East," the goal of the builders of the West seemed in sight.⁵

In this work of nation-building Jesse Fell had no small part in that region which he adopted for his home. He worked mainly in Central Illinois, with Bloomington as a center, but branched out wherever opportunity offered. Clinton was among the first towns in which he became interested. He founded the town, with James Allin, in 1835, naming it for DeWitt Clinton. Mr. Fell had entered a goodly amount of land about the site of his proposed town before laying it out, and made a handsome profit from the sale of town lots. The town owes to him, as did all the places where he had a chance to plant, its early growth of trees.

Fell did not escape paying the price for what he accomplished. His restless energy led him to overwork, and in June,

⁵Mail routes were established by Congress in response to petitions from citizens of the localities to be served. In 1838, for instance, the people of McLean and Tazewell counties asked for a mail route from Bloomington to Lacon. It was not granted at once, but came after some delay. Richard M. Young to Fell, Feb. 21, 1839.

1835, he became very seriously ill. He was in Chicago at the time of his seizure, on the twenty-third of the month, and started on the next day for Bloomington, hoping to reach his friends before the malady developed into one requiring constant care. He succeeded in reaching the home of Dr. Gaylord at Oxbow Prairie in Putnam County, where he was taken in and cared for while he lay helplessly ill for three weeks. At the end of that time he was placed in a carriage and taken to Bloomington, not without further injury to his health, and was unable to attend to his usual duties until about the end of July. Early in August, however, he made a long trip to St. Louis, stopping at the Brown home in Delavan on the way. He himself attributed his illness to exposure and overwork, explaining to his family that in the six months preceding it he had ridden not less than five thousand miles, going sixty, seventy, eighty, and even eighty-five miles a day. These journeys, he further pointed out, he had made in every kind of weather, hot and cold, wet and dry, swimming his horse through streams and afterward riding in wet clothes for hours, and making long rides at night. But the end for which he had endured these hardships was by that time gained, and he registered a vow never again to abuse his health and strength in this manner. He had made, he said, not only what he himself needed, but also a surplus with which to aid those who had long aided him.⁶

Having thus earned a rest, in the autumn of that year he went back to his old home for the first time since settling in the West, stopping on the way for a visit at the home of his brother Thomas in Lancaster, Ohio. In Pennsylvania he suffered a return of his former illness, lying ill at his brother Robert's in Little Britain for over a month. In the spring of 1836, however, he was back in Bloomington, not only looking after his own interests, but planning for his brother Kersey. He had entered land for his brother Joshua during the preceding year, and this was deeded to him in May, 1836. Kersey Fell, after a period of clerkship for Covell and Gridley, was made clerk of the newly erected DeWitt County with power to organize it. He was later admitted to the McLean County bar and practised for many years in Bloomington. Thomas left Ohio for the same place after his brother's visit in the autumn of 1835. Rebecca Fell, a

⁶Fell to some member of his family, Aug. 3, 1835. When Kersey Fell arrived in Bloomington the next spring, he was told that his brother was "one of the richest men in town". Lewis, *Life*, 25.

favorite sister, was being educated at Kimberton Boarding School, and later became a teacher in McLean County.⁷ In 1837 all of Fell's family who were not already in the West came to Bloomington, where they made their home subsequently.

Two years after his family had followed him to Illinois, Mr. Fell married Hester Vernon Brown, a daughter of that home which had first welcomed him to the West. She had been "finished" at a boarding school in Springfield since the days when Fell had been tutor in the Brown home. Rev. Nathaniel Wright of Tremont, a Universalist clergyman, performed the marriage ceremony, for both bride and bridegroom had become somewhat liberal as to Quaker ways and Quaker customs.⁸ The wedding day was January 26, 1838. Mr. Fell's parents were not present, but his sister Rebecca and his brother Kersey attended, and his close friend David Davis was best man. Joshua Brown, brother of Hester, who was also a friend much valued, came to the wedding from his home in Edwards County, and afterwards helped to move the household goods into the cottage that Mr. Fell had built in Bloomington. This cottage, later enlarged by many additions, was on the land which Fell subsequently sold to David Davis. In the accomplishments of Jesse Fell his wife had no small part. She was a notable "manager," in the comprehensive sense in which that word is used in speaking of housewives. She was courageous, capable, and independent. In her own home and in the community she seconded the efforts of her husband with sympathy and ability. Outliving him by twenty years, she was privileged to carry out some of the plans which he himself had left unfinished; and in the same time she demonstrated the force of her own personality, which for so many years she had chosen to make second to his.

After the first few years in Bloomington Fell neglected his law practice in favor of the more congenial work of buying and

⁷*McLean County Historical Society Transactions*, II, 35. Fell to Hester V. Brown, Feb. 28, 1837. Rebecca Fell to Fell, Nov. 20, 1836. In this letter Fell's sister expresses the greatest love for and gratitude to him. It is finely written and quaintly composed, but unbends in places to a degree of childish carelessness and even to one faint suspicion of slang. Other letters, models of an art carefully taught in girls' boarding schools of that day and showing both strength of character and an irrepressible sense of humor, are dated June 10, Sept. 25, Oct. 23, and Christmas, 1836.

⁸Rachel Sharpless (a great-aunt) to Hester Brown. Undated, but about 1836.

selling land. In 1836 he sold out both books and practice to David Davis, altho he continued to use the same office with him for some time. Davis had come from Maryland in the autumn of 1835, and settled in Pekin. The chills and fever of the early prairie days so sapped his strength that he had about decided to leave Illinois, when Jesse Fell, alert for a good lawyer to whom he might turn over his now burdensome practice, persuaded him to go to Bloomington. He offered his own books, office and whatever financial aid might be necessary, as an inducement; and kept through a long life his promise of friendship and help. With the practice and office, Fell sold him several hundred acres of land, at the prevalent price of eight dollars per acre, and this land became the nucleus of Davis' subsequently considerable fortune.⁹

His real estate and other business took Fell frequently to the eastern cities. In 1841 he made such a trip, of which interesting details are to be found in various letters. Bidding his wife good-bye at Pekin, whence she went to her father's home with her son Henry, to stay until her husband's return, he boarded the *Glaugus* for St. Louis. There he waited from Monday until Wednesday for a boat to Cincinnati, taking then the *Goddess of Liberty*, which he declared "a splendid boat," and which reached the city on Sunday evening. On Monday morning he took passage in the *Tioga* for Wheeling, thence by stage to Baltimore, where he arrived June 20, 1841. Two days later he was in Washington.

In that city he met, in the House of Representatives, his old preceptor and friend, General Stokeley of Steubenville. He interested Stokeley in the manuscript of a book he had with him, which had been copyrighted in March; and the two men arranged for its publication. It was a digest of laws and forms relative to real estate, evidently intended to be used as a reference or text book. No further reference is made to it after 1841, and it was never published. Fell wrote to his wife at the time that he had secured favorable attention from some of the best

⁹The *Bloomington Observer and M'Lean County Advocate* of April 22, 1837, contains the professional card of "David Davis, Attorney and Counsellor at Law. . . Office on Front street, with J. W. Fell, Esq. . ." The same newspaper contains the card of Thomas Fell, vendue crier. Fell in the *Pantagraph*, June 29, 1886.

lawyers in the country concerning it. "We think we shall be able to make some money out of it," he added.¹⁰

Jeremiah Brown, a member of the House, was another old friend whom it was a pleasure to greet. The Westerner found much entertainment in visiting sessions of Congress, and wrote his wife faithful accounts of what he saw there. Clay had introduced his bank bill, which many thought would pass, "although some fear." Fell heard him make a strong plea for it, which, he wrote home, was "a great effort;" he still thought Clay a very great man, but had decided that noted men are in general like others—"distance lends enchantment . . ." "I yesterday visited the President and Post Office Department—and had a couple of local postmasters dismissed. The President [Tyler] is a clean, good sort of man—but 'ugly as sin.' " He predicted the creation of a national bank, the repeal of the sub-treasury law, the distribution of the proceeds of the sale of public lands, a slight modification of the tariff—events that any loyal Whig might easily persuade himself that he saw upon the political horizon.

From Washington he returned to Baltimore, and took passage in a steamboat down Chesapeake Bay to the eastern shore of Maryland, where he visited Frank Brattan, an old Bloomington friend. Returning to Baltimore, he went the next day to Philadelphia, noting the fact that it required but five hours to go a hundred miles. In Philadelphia he was most impressed, to judge by the space given to the matter in one of his punctiliously frequent letters to his wife, by a new "bonnett" being worn by the Quaker girls of that city. "I have concluded," he wrote her, "when I get ready to start home to buy thee a Bonnett, if I can muster money enough to spare—of a very pretty fashion lately introduced. If I get one I will get the *materials* to make some more of the same kind. . . . I have almost fallen in love with the Quaker bells of Chestnut Street on account of their pretty bonnetts. Not perhaps entirely on account of their bonnetts either—but because they are in the *first place* in *themselves* very pretty—and *secondly* because their dress and deportment is so

¹⁰The complete title: *Digest of the Statute Laws of the States and Territories of the United States concerning the promissory notes and bills of exchange—the limitations of actions—the conveyance of real estate and the appropriate modes of authenticating deeds, devises, letters of attorney, etc.* Copyright Office Records, U. S. D. C. MISC., March 6, 1841; District of Illinois. Fell to his wife, June 22 and July 6, 1841.

neat and modest. Of all the city girls in the world commend me to the Philadelphians." He promised his son Henry books and toys in the same letter.

During his stay in Philadelphia, besides attending to the business which had taken him to the East, he visited a close friend, Joseph J. Lewis, at Westchester. The return trip was made by way of New York City and the Great Lakes. Fell expected to reach his home by the first of August or thereabouts; there is no record of the exact date of his return. The details of this trip to the East have been given with some degree of fullness, not only because they serve to illustrate many of Fell's interests, but because this was the first of many similar journeys; for until old age forced him to limit his activities, he made one or two trips to the Atlantic seaboard each year.

The real estate business, indeed, entailed far more absence from home than suited Fell, but it also took him much into the open, which was with him a strong consideration. Its financial returns were greater than those of law practice, and it brought him into constant contact with many men, and with the very heart and spirit of the growth of the West. But the panic of 1837 put a stop to real estate operations, as to all other business. Fell lost all that he had gathered together, and was compelled to take benefit of the bankruptcy law of 1841. Surrendering all his lands, he was discharged from his indebtedness (which was later entirely repaid), and began again, as penniless as when he first came to Illinois in 1832. As the bankruptcy court offered much business for lawyers, he took up his old profession again, reluctantly but with marked success. The sessions were held in the United States court at Springfield, and the work brought Fell again into his old strenuous habits. He invariably prepared his cases in Bloomington, that he might be with or near his family as much as possible; then leaving his home at sunset, he would appear in court the next morning, ready after his all-night drive to prosecute the business of the day.¹¹

¹¹Certificate of admission to the Illinois District Court, Feb. 10, 1842. In an interview with Richard Edwards long afterwards, Fell explained his dislike of law by saying that he wished to be able to use his powers of persuasion where conviction urged, and not for money from clients; and that he disliked to live indoors. "A few years later, having accumulated some property, he voluntarily paid all his indebtedness, although not legally liable." E. M. Prince, "Jesse W. Fell;" Lewis, *Life*, 34.

But the practice of law was as irksome to him as it had been before, and he planned to escape from it as soon as possible. Since real estate offered no means at that time, he resolved to try farming, and for that purpose moved in 1844 to a new home, which was known then and for many years after as Fort Jesse. Some people, appalled at its distance of four miles from the town, called it Fell's Folly. It had been entered for Joseph J. Lewis, and was far from any other habitation, having but one house between it and Bloomington. There was a stream upon the place, which in rainy seasons of the year became too swollen to be forded. Here Fell made a cabin, and broke the virgin prairie in very real pioneer fashion. He rejoiced in the opportunity to plant trees, and put out many of the black locusts which were regarded at that time as particularly well fitted to Illinois conditions, since they grew rapidly and produced a very hard and durable wood. The borer, which makes the black locust an enemy to all other trees and a nuisance in a community, had not then appeared.¹²

The life of the Fells at Fort Jesse was the life of a typical pioneer family. Nightly there burned in their window the candle which pioneer custom prescribed as a guide for travelers; and nightly, there howled around it the prairie wolves. Henry Clay Fell relates an incident which illustrates the conditions under which the prairie farm became a home. Mr. Fell and his wife had gone to Bloomington, and while they were absent a storm had swollen the stream so that it became impassable. Two children, Henry and Eliza, had been left at the farm, and at the coming of the storm they became much frightened. While they crouched in a corner, a big grey wolf thrust in his head at the window, where a pane of glass had been broken out. Henry, altho then but seven years of age, had the courage of pioneer children, and threw a footstool at the wolf's head, which frightened him away. The pet deer, which the children had brought into the cabin, and which attracted the wolves, was later given to a son of General Gridley.¹³

In 1845 Fell bought a farm of one hundred acres near Payson, Adams County, to which he moved from Fort Jesse that autumn. About forty acres of the farm were in timber; and thirty acres of that under cultivation were set out to trees, Fell's intention being to establish a nursery which should cater to the mar-

¹²Jacob Spawr in *Pantagraph*, July 1, 1881. Lewis, *Life*, 35.

¹³Lewis, *Life*, 35. Interview with Henry Fell, May 31, 1913.

ket afforded by the increasing settlements in the neighborhood of Quincy. The nursery business did not meet his expectations, altho he sold enough fruit to make the venture a paying one. The farm, which was about a mile and a quarter northwest of the village, was known as Fruit Hill. As Quincy afforded him his nearest large market, Fell set to work to have a good road made to that town. He succeeded, largely through his own exertions, in securing a straight road of twelve miles which passed through his farm.¹⁴

During this period he found time to take an interest in various public affairs, and particularly in education. He spoke at teachers' institutes,¹⁵ and was much concerned for the welfare of the local Methodist church, of which he became a member. When he moved to Fruit Farm there was only a private school at Payson, but during his residence a "seminary," kept in such a way as more fully to serve the needs of the community, was opened. Farming did not prevent an active interest in state and national affairs, as a letter from Lincoln at this time shows. As an orthodox Whig, he strongly disapproved the management of the Mexican War, and wrote to Lincoln, then serving his state in Washington, to ask him to present a petition for a speedy peace. Lincoln promised to do so at the proper time, but added that there was in Washington a feeling that the war was over and that the treaty sent in would be endorsed.¹⁶

In 1849 a number of the citizens of Quincy, led by John Wood, afterward governor, resolved to go to California, where the gold fields were attracting people from all parts of the world. Fell was asked to join the party, and made preparations to go, altho it was necessary to borrow money for the expedition. He went to Bloomington and bade his friends good-bye, but at the last minute failed to raise the funds necessary for an outfit, and gave up the project.

In 1851 he arranged to return to Bloomington by trading his Payson farm to his brother Robert for a farm of two hundred forty acres near Bloomington. Robert Fell disposed of his nursery stock to F. K. Phoenix, who came to Bloomington from Delavan, Wisconsin, at Jesse Fell's earnest solicitation. Starting with Robert Fell's stock of trees, Phoenix in time developed

¹⁴Lewis, *Life*, 37. Fell to Rachel Brown, Oct. 1, 1848.

¹⁵The report of one such address, given before the Adams County Institute, is in the *Western Whig* of July 20, 1850. Lewis, *Life*, 36.

¹⁶Lincoln to Fell, Mar. 1, 1848.

one of the most famous of the nurseries for which Normal was later notable.

Upon his return to Bloomington Fell first engaged in newspaper work, of which mention is made elsewhere more particularly. He soon gave that up, however, to reënter the field of real estate, which was again becoming a source of profit. Having little money of his own, he made a trip to New York and Boston in the autumn of 1852, for the purpose of interesting eastern capitalists in Illinois land.¹⁷ In this he was very successful, and during the decade following he bought and sold great tracts of land throughout Central Illinois, founded several towns, and enlarged others. Pontiac, Lexington, Towanda, Clinton, LeRoy, El Paso and other towns were among those in which he was largely interested. He made additions to Bloomington and Decatur, and dealt in town lots in Joliet and Dwight. North Bloomington, later Normal, was first planned in 1854.¹⁸

With the founding of these towns came the need of means of communication and transportation. In road-building of the primitive sort which served Illinois for years, Fell did his part. He secured, for instance, the surveying of a wagon-road parallel to the railroad, from Bloomington to Towanda, altho he did not succeed in having it extended to Lexington. He was active in making a similar road from Lincoln to Minonk. Early in his life he had learned surveying, and this stood him in hand later in many ways. His ability to measure land and determine lines saved time and money in numberless instances.¹⁹

¹⁷Fell to his wife, Sept. 26, 1852.

¹⁸*Pantagraph*, Sept. 1, 1899, Nov. 28, 29, and Dec. 1, 1902. *Bloomington Intelligencer*, Aug. 10, 1853. The first plats of North Bloomington (undated, probably 1854) were lithographed by Latimer Brothers and Seymour, 15 Nassau st., corner of Pine, N. Y. Mr. Fell's interests in Pontiac came very near ending disastrously. An addition to the original town was made on land bought from a youth whose father sold it as his guardian. Later, the Supreme Court made a decision in a similar case which would have invalidated the Fell title and all subsequent titles, had not an astute lawyer of Pontiac, R. E. Williams, been able to prove that the young man had accepted his guardian's arrangements and receipted him. The Supreme Court upheld the Fell title.

For an account of an unsuccessful attempt at town-founding, see J. O. Cunningham, *History of Champaign County*, 672 ff. Judge Cunningham quotes Peck's *Gazetteer* (1837), which mentions "Byron, a town-site in Champaign County", on page 168. *Bloomington Observer*, Nov. 17, 1838. *Pantagraph*, Aug. 24, 1901, and Nov. 29, 1902.

¹⁹Interview, Henry Fell, May 31, 1913.

Going farther afield, in 1855 he bought timber lands in Southern Illinois, and built a lumber mill at Ullin, where the Illinois Central railroad crosses the Cache River about twenty miles north of Cairo. Lyman Blakeslee was his partner in this mill, and his brother Kersey in another at Valley Forge, which was operated by Elijah Depew, an old neighbor in Bloomington. E. J. Lewis, who was employed by Fell for about six months at Ullin, records that the winter of 1855-56 was an unusually cold one in Southern Illinois, the thermometer often falling to eighteen degrees below zero. Armed with stout sticks and a compass, Fell and Lewis tramped over the frozen swamps, personally inspecting the low lands. The growth was cypress for the most part, and the strange "knees" (root protuberances) greatly impressed the two Pennsylvanians, to whom growths so fantastic were entirely new. The mill at Ullin was kept busy sawing out logs, for the unusual amount of ice in the rivers did great damage to the steamboats on the Mississippi and the Ohio, breaking wheels and injuring hulls. Putting into Cairo, they secured oak and other lumber for repairs from Ullin by rail.

The brisk business of that winter led Fell to put great faith in the Ullin venture, and in the autumn of 1856 he moved his family to that place. But the normal demand for lumber in Southern Illinois was not sufficient to guarantee a prosperous business, and in the spring the family returned to North Bloomington. The mills not having fulfilled their initial promise, Fell again turned his attention chiefly to real estate, which had not been neglected during his residence at Ullin.²⁰ In 1856 he advertised for sale "about 5000 acres of land" in Livingston, McLean, and Vermillion counties, and about three hundred fifty town lots in various parts of Illinois.²¹ In the autumn of that year he conducted at least one auction sale of lots (at Towanda) and this method of sale was repeated on a considerable scale in the fall of 1857. Late in the decade his holdings became very large, while records in the abstract offices show that he drove a lively business in transferring property.

It was during the summers of 1856 and 1857 that Fell built the house at Fell Park in North Bloomington, which became afterward one of the landmarks of Normal. The house still stands (1916), altho removed from its original site. It was a roomy square wooden structure, with a cupola atop, and verandas built

²⁰Lewis, *Life*, 44.

²¹*Pantagraph*, July 2, 1856. Tax list, May 14, 1859.

around three sides. It stood upon a knoll which Mr. Fell had selected more than twenty years before as a good place for his final residence.²² Here he secured about eighteen acres on the edge of the town, and planted the land to trees and shrubs according to the plans of William Saunders of Philadelphia, a landscape gardener of reputation. A herd of deer was added later, and the park was frequently opened to the public.²³ Men great in the history of Illinois and the nation were entertained there; it became a famous meeting-place of notable people. Lovejoy, Bryant, Lincoln, Davis, Swett, and other leaders were frequent visitors. The Fell children entertained their friends there freely; it was a center of social life. The master of the house, himself usually absorbed in business, liked to have people about him enjoy themselves. In the town's first years, this was the only private house in Normal in which dancing was permitted.

The years at Fell Park were so full and so pleasant that one likes to linger upon the story of its life. There Mr. Fell's children grew to maturity, busy with many tasks and very happy. Here his elder daughters Eliza and Clara were married, the former to W. O. Davis, for many years editor of the *Pantagraph*, and the latter to Lieutenant James R. Fyffe, an officer of the Thirty-third Illinois Volunteer regiment. Here the older children went to school, with their cousins and neighbors, in a small building used temporarily as a carpenter shop during the building of the house. This was a district school, but as it failed to meet all requirements, Mr. Fell employed Miss Mary Daniels, lately graduated from Mt. Holyoke, to teach his own children, their cousins, and the McCambridge children in his own home. This private school was continued until the "model school" at the Normal School opened.²⁴

The master of the house, who never grew away from the simple ways of living in which he had been bred, directed the industries of the home group. He was himself a man busy with his

²²In 1833, when riding over the prairie with a neighbor named Kimler, Mr. Fell remarked that the roll in the prairie would be an ideal place for a home; whereupon Kimler had replied that probably no one would be fool enough to build so far from the timber. Grace Hurwood to Fannie Fell, Mar. 16, 1913. Captain J. H. Burnham, in his "Our Duty to Future Generations," an Arbor Day address delivered at the I. S. N. U. on April 21, 1905, relates the same incident.

²³J. D. Caton to Fell, Aug. 9, 1866.

hands, where other men of his interests would have had manual labor done by others. He pruned his own trees and supervised personally the planting of shrubs or the erection of new buildings. All this workaday enterprise was not conducive to an appearance of immaculate grooming. His wife, and more especially his daughters, tried to look after him to keep him fresh and trig. His friends, driving to Fell Park to consult him on business or politics, found him perspiringly industrious on the warmest summer days. Distinguished company, received in the parlor, waited while Mr. Fell was being hunted through field and orchard. "The girls" waylaid his path with the paraphernalia of refreshment. Somewhere between the back porch and the front parlor, a hasty scrub, a brushing and a clean collar must be administered. He submitted to this loving supervision good-naturedly; he loved to be "fussed over" by his daughters, and he himself was a man of fastidious personal habits. "It's all right, girls, it's all right," he would say. No amount of feminine emphasis, however, could persuade him that one's personal appearance was a matter of great moment; he was interested in bigger things. The happiness of generations to come was the enterprise of men such as he, and in view of that a dusty coat or work-soiled hands could matter little.²⁵

²⁵Mrs. L. B. Merwin (a grand-daughter), interview, Nov. 29, 1912. Dr. Sweney, the family physician, related a story which shows Fell's indefatigable energy. A refractory horse had kicked him until he was a mass of bruises, and the doctor, being called to repair the damage, had swathed him in bandages and soaked him in liniment and left strict orders that he was to be kept quiet. The next day, calling to redress the bruises, the distressed and apologetic family had to "chase after father" down to the edge of the place, about a quarter of a mile, and bring him up for examination and admonition.—John Dodge, "Concerning Jesse W. Fell," in the *Fell Memorial*.

CHAPTER III

THE JOURNALIST, 1836-1858

In the very early days of Bloomington, General Gridley made a yearly trip to the East to buy stock for his general store. In the autumn of 1836, Jesse Fell and James Allin intrusted to him the important commission of purchasing the equipment of a printing establishment, and of finding a man to edit and print a newspaper for McLean County. Gridley induced two men, natives of Philadelphia, to return with him: William Hill and W. B. Brittain. Hill had been employed for some time upon the *St. Louis Democrat*, and was acquainted with Western ways and conditions. Brittain came directly from Philadelphia, having shipped the press and type by way of New Orleans. The two men arrived in October, but Brittain became discouraged and went back to Pennsylvania before the coming of the outfit. Hill stayed, and setting up his press in a room in the court house, brought out on January 14, 1837, the first number of the *Bloomington Observer*. About twenty numbers were printed before the paper suspended publication. It was well edited and well printed, for a frontier paper; but in the little struggling town it found insufficient support, despite its spirited interest in all that concerned the welfare of the place.¹

Fell and Allin were sadly disappointed at the fiasco. Altho his finances were then at a low ebb,—or possibly because of that—Fell bought what he did not already own of the suspended *Observer*, and began to edit it himself in January, 1838. This venture was somewhat more successful than the first one, as the paper continued to appear for over a year, until conditions caused by the hard times forced Fell again to stop its publication. The last number appeared in June, 1839, after which time Bloomington had no paper for several years. Fell sold the printing outfit, which tradition says was moved to Peoria.²

The recovery from the severe depression of 1837 seems to have been especially slow in McLean County, where land specu-

¹*Pantagraph*, Jan. 14, 1857. Interview with Henry Fell, May 31, 1913. Scott, *Newspapers and Periodicals of Illinois*, 27.

²The *Democratic Press* was established there in February, 1840. Scott, *Newspapers and Periodicals of Illinois*, 278.

lation had been very brisk. Not until 1845 was there found a man who had the courage to undertake to publish a newspaper there. In that year R. B. Mitchell started the *McLean County Register*, but shortly gave it up to Charles P. Merriman, who established a weekly, the *Western Whig*. He associated R. H. Johnson with him late in 1849, and early in 1850 Johnson and I. N. Underwood became proprietors and editors. They associated Merriman with them again somewhat later for about six months. This arrangement terminated on November 19, 1851, at the end of the fifth volume of the *Western Whig*, when Mr. Fell and Mr. Merriman undertook the joint management and editorship of the paper. A new outfit of type, brought up the Illinois River and carted over from Pekin, was purchased and the name of the publication changed to the *Bloomington Intelligencer*. This partnership was in turn dissolved on March 17, 1852, when Mr. Fell became sole editor and publisher. He managed the paper until the end of that volume, November 17, 1852, and then retired, being succeeded by Mr. Merriman as sole owner. Mr. Merriman was a classical scholar of some repute, and changed the name again to the *Pantagraph*, a name under which it has become well known and very influential throughout Central Illinois.³

Fell's connection with the *Pantagraph* did not cease with the termination of his official editorship. His name appeared as late as February 9, 1853, as contributing editor of the *Intelligencer*. As a medium for moulding public opinion, he found it a useful ally, and wrote for it often. Its editors and managers found him a constant source of helpful suggestions, and seem to have consulted with him on questions of business policy.

For many years after disposing of his partnership in the *Intelligencer*, his newspaper work was of this occasional and unofficial nature. During the Civil War, his interest in reform centered in the struggle then waging, but after its close he cherished the hope of establishing at Normal some kind of journal which might become the mouthpiece of various reform movements then more or less before the public. Interesting some of his friends, he purchased an outfit for publishing a paper, and was rapidly completing plans for its appearance when he learned

³Lewis, *Life*, 38. The issue of the *Western Whig* for Dec. 11, 1847, is No. 6, Vol. II. It was published at No. 3 Brick Row, Front street. The inventory of the printing outfit of the *Western Whig* (no date, probably Nov., 1851), is among the *Fell MSS.*

that Scibird and Waters, then proprietors of the *Pantagraph*, were seeking a buyer for their paper. He had already carried negotiations for an editor for his proposed paper, through correspondence with Greeley and others, almost to the point of engaging a certain Dr. Weil.⁴ But as the *Pantagraph* had already a wide circulation and a considerable influence, it was far more valuable to a man with a propaganda than any newly established sheet could be, and Mr. Fell, with James P. Taylor and his son-in-law William O. Davis, made haste to secure it. This was in August, 1868.

The *Pantagraph* was a Republican organ of moderate partizanship. Mr. Fell abandoned the idea of making Mr. Weil editor, deciding to fill that post himself. He entered into editorial duties with zest, perhaps remembering his experience with the ultra-ethical *Eclectic Observer*. Mr. Davis became business manager. Fell was, however, a somewhat impractical chief, by far too idealistic for the environment of a newspaper office. Moreover, the confinement of office life was as irksome as ever. After a few months, he gave up the editorial management, which was taken over by his old friend Dr. E. R. Roe, in June of 1869.⁵ Mr. Fell retained his connection with the paper until late October, 1870, when he sold out his entire interest to his son-in-law. Mr. Taylor also disposed of his share to Mr. Davis, leaving the latter entirely responsible. Mr. Fell thereafter confined his newspaper work to occasional editorials and to special articles upon the subjects which engaged his interest.

⁴T. Tilton to Fell, Nov. 24, 1868. In this letter Dr. Weil, "long . . . known to Mr. Bungay and Mr. Greeley," is recommended for the editorship.

⁵Dr. Roe had entered the Federal army as "a bitter Jackson Democrat," but came back "a Black Republican." He was in every way the man to carry on Fell's dream of a popular newspaper advocating reform. He was very popular, having been advanced to a colonelcy in the army from the ranks. Upon his return to civil life he was elected a deputy in the circuit clerk's office to follow Luman Burr. Luman Burr in the *Daily Bulletin*, July 6, 1913. *Bloomington Democrat*, Sept. 30, 1864; *Pantagraph*, Oct. 1, 3, 1864; Aug. 12, 1868; Nov. 1, 1870; Mar. 13, Oct. 23, 1871.

CHAPTER IV

FOUNDING THE NORMAL SCHOOL, 1853-1860

The advocates of free public schools in Illinois secured a law authorizing but not establishing them, as early as 1825. This law was so amended as practically to annul it two years later, which means that Illinois had no public school system until 1855. The desire for an effective public school law took definite form after an impromptu conference at Bloomington of three men who realized the need of the state and were disposed to take measures to relieve it. These men were J. A. Hawley of Dixon, H. H. Lee of Chicago, and Daniel Wilkins of Bloomington. They issued a call to all friends of free schools for a meeting to be held at Bloomington on December 26-28, 1853. The call was signed by the secretary of state, who had charge of all educational affairs in those days, by the presidents and faculties of two of the leading colleges of the state—Shurtleff and Illinois Wesleyan—by the clergymen of Bloomington, and by others who were interested. E. W. Brewster of Elgin was made president of the conference, which was large and enthusiastic. Every man who had a solution to offer for the educational problems of the state was there with his resolutions, his friends, and his arguments.¹

Several of the principles embodied in the resolutions passed at that meeting were afterward incorporated in the state law, and have been largely instrumental in shaping the educational policy of Illinois. They included a plan for a State Teachers' Institute, afterward the State Teachers' Association, which was carried out immediately and has been in operation ever since. Another called for a state superintendent of schools, who should devote all his time to the interests of education. Authorized

¹State Superintendent of Public Instruction, *Reports*, I, 127-138. *Illinois Teacher*, I, 321-328. The convention here mentioned was not the first of an educational nature in the state, but the first that concerned itself especially with the common school system. *Illinois Teacher*, I, 328-336. J. H. Burnham, "Educational Convention of 1853" in *School Record of McLean County* (McLean County Historical Society; *Transactions*, II), 118-127.

by a new state law, Governor Matteson appointed, on February 9, 1854, Ninian W. Edwards as the first superintendent of schools in Illinois. A third resolution was in favor of a journal devoted to education. This periodical, called the *Illinois Teacher*, was started after the Peoria meeting of 1854, with a curious scheme of editorial management by which a different man was made responsible for its contents each month. The result of this division of labor was an uncertain quality of content and financial disaster. After a year's trial of the plan Mr. Charles E. Hovey of Peoria, one of a valiant group of New Englanders who were then the educational leaders of the state, was made editor and manager. He was vigorous and able, and put the publication speedily and effectively upon its feet.²

Then there came up a question which was bound to cause a discussion, for it involved the fundamental differences of men whose training and ideals gave them widely diverging conceptions of the needs and the consequent policies of the state. This was the question of the establishment of some institution for the better training of teachers. All were agreed that such a school was a vital need; scarcely any two were agreed as to just what type of school could, in this new and growing country, accomplish the end sought in the best way. Jonathan B. Turner, from whose fertile brain came the vast and comprehensive scheme resulting finally in the founding of the great state universities of the Middle and Far West,³ was trying to awaken enthusiasm for a combination school to include agricultural, industrial, and normal school departments. The friends of the already established denominational colleges, who feared the results of separating education and religion by the founding of state schools, wished to add normal departments to Shurtleff, McKendrie, Knox, and Wesleyan. A third group, armed with the record of the normal schools of Massachusetts, strongly advocated a separate and "untrammeled" training-school exclusively for teachers.⁴

Jonathan Turner had organized the State Industrial League, a society working for a state industrial college, and numbered Mr. Fell, who was director of the McLean County division,⁵

⁵Organized Feb. 9, 1854.

among his sympathizers and helpers. Fell was eager to see the industrial college founded, but knowing that a normal school was both more popular and more immediately needed, was willing to wait for the realization of the more comprehensive plan. With Turner he bent his energies toward uniting educational forces for the accomplishment of some one definite object.

The various schemes were further discussed and worked over at a meeting held in Peoria in December of 1854. At the third meeting in Springfield it became plain that the advocates of a separate normal school were strongly in the majority, and the next year in Chicago they secured the passage of a resolution to the effect that the Association did not wish "to discuss any university question, but occupy themselves with the interests of common schools and Normal schools." Mr. Turner, whose visions of the future did not blind him to immediate demands and practical methods, yielded his own larger plan with a grace made possible by his great faith in its ultimate realization; and the Association passed a resolution which called for an appropriation for "the immediate establishment of a State Normal School for the education of teachers."⁶

The legislature, which had already (in 1855) established a free school system, passed the desired law, and Governor Bissell signed it on February 18, 1857. The law designated the members of the state board of education, who were in charge of the affairs of the school, but did not state its location, which was to be decided by competitive bids.

It was after the passing of this law that Fell's interest in the normal school became intensified by the hope of securing it for Bloomington. Long before this he had hoped to see an institution of learning, the exact nature of which was not then clear to himself, in the town of North Bloomington. Upon his return from Payson he had become a member of the first incorporated board of trustees of the Wesleyan University, serving until 1857.⁷ Now he saw in the projected normal school an opportunity of realizing quickly his dream of making North Bloomington a school town, and so attracting to it the class of citizens he wanted

⁶Superintendent of Public Instruction, *Reports*, II, 53ff. *Illinois Teacher*, I, 254.

⁷His greatest service to the institution lay in his influence in changing its location from Seminary Avenue near the present Chicago and Alton shops, in the outskirts of Bloomington, to the central site which it occupies. James Shaw in *Fell Memorial*, 4; John F. Eberhart, *ibid.* 19.

it to have. The block for the "Seminary" had long been selected, but he abandoned it in favor of a larger tract farther removed from Bloomington. Other people had other ideas as to what was the best site. Five, besides the one favored, were offered. The other five, however, had less in the way of subscription attached than the one he advocated. This was part of the Parkinson farm of three hundred fifty acres, owned at that time by Dr. Joseph Payne and Meshac Pike, who had recently bought it. David Davis and E. W. Bakewell each added about forty acres, which made the tract about a quarter-section.

Mr. Fell carried on the work of securing subscriptions, aided by others who reported to him regularly. The amount of the subscription was kept out of the newspapers, and very little said of the matter where rival towns might hear of it. Anything that could be used was solicited; and land, cash, notes, even nursery stock and freight donations, were given. Friends of popular education outside the state were appealed to by some, altho few if any responded.⁸ As is often the case, many of the offers were saddled with embarrassing conditions. One set of offers stipulated that the site should be within a mile of Bloomington; another, that it must be within three-fourths of a mile of the railroad crossing at North Bloomington; still another, within three miles of Bloomington. Mr. Fell's site satisfied all these conditions.

Meantime other towns had not been idle. Batavia offered a ready-made plant in the grounds and buildings of the Batavia Institute and fifteen thousand dollars in cash. Washington, in Tazewell County, offered the buildings and grounds of Washington Academy and cash to the amount of twelve hundred dollars. Peoria was known to be piling up a large subscription, but no one in Bloomington could find out just how formidable this rival was.⁹

It was at this point that John F. Eberhart gave substantial help. He was a teacher who had been forced by ill-health to give up regular classroom work, and who spent much time in holding

⁸Among these was Alexander Campbell, the founder of the Church of the Disciples. He seems to have been favorable to the project at first, but later declined to help. Thirty years after, Fell attributed this to Campbell's statement that "Mr. Bakewell and wife had done enough." Bakewell had married Campbell's daughter. Campbell (Bethany, Va.) to Fell, 1857.

⁹Superintendent of Public Instruction, *Reports*, II, 286-291.

institutes throughout the state. This gave him an opportunity to know conditions thoroly, and his knowledge of conditions made him greatly interested in the projected normal school. He met Mr. Fell first when attending an educational meeting in 1855 or 1856, when he was entertained at the Fell home. The two men became fast friends, and when Eberhart found out how keenly Fell wanted the normal school for his own town, he was minded to give all possible aid. This resolution was strengthened by his own dislike for Peoria, which he considered undesirable because it was "a river town and a whiskey town." He entered into the contest for Fell and Bloomington, even as Simeon W. Wright was entering it as a champion of Hovey and Peoria. For about three months he worked with Fell in McLean County, a guest at his home and party to all his plans.¹⁰

About a week before the final decision was to be made, Eberhart made a trip to Peoria to see clearly just what the situation there might be; and chanced, fortunately for his purpose, upon a friend, a teacher, who in his enthusiasm told him the amount of the subscription already secured. Returning at once to Bloomington, he told Fell that it would be necessary to raise the Bloomington subscription. Fell asked him if a ten thousand dollar advance would be sufficient, and Eberhart replied that it would have to be more than that. Fell suggested fifteen thousand, but Eberhart repeated that it must be still more. Fell inquired if twenty thousand would do, and received the same reply. But when he was asked if twenty-five thousand would cap Peoria's bid, Eberhart replied that such a bid would secure the normal school. Fell vowed that Bloomington would raise the money.

But he wanted to see for himself just how things were at Peoria, since Eberhart's sense of honor prevented him from telling details. He knew that a powerful stimulus, combined with knowledge of the real situation, would be necessary if his townsmen were to be persuaded to raise their already generous bid. Eberhart had brought him the news from Peoria on Friday, May 3, 1857. At Fell's request, he set off at once for Chicago, to interview the three members of the board resident there, in the interests of the Bloomington location. If these men were at all unfriendly, they were effectively won over by Eberhart during the week-end he spent in Chicago.

Meantime, having seen Eberhart off, Fell harnessed Tom to the buggy and set off for Peoria, where he knew there was to be

¹⁰John Eberhart, in *Fell Memorial*, 23.

a citizens' mass meeting that night. He covered the forty-five miles in time to attend the meeting, and was observed in the audience by Hovey. No attempt, however, was made to keep secret the amount of the subscription at this meeting. The jubilant committee, sure that in the short time left no competitor could equal their offerings, were not alarmed even at the sight of their rival's appearance—an apparition that would have meant more to them had they know him better.

It was late when the meeting adjourned, but early the next morning Fell was back in Bloomington, briskly presenting to the leading citizens the somewhat appalling dictum that an additional twenty-five thousand dollars must be subscribed. He began by raising his own cash subscription to two thousand dollars, with seventy-five hundred dollars in Jackson County lands, worth about five dollars an acre. Others caught his enthusiasm and added to their subscriptions until the individual pledges, already totalling fifty thousand dollars, amounted to seventy-one thousand. The county commissioners, who had before subscribed for the county a sum equal to the private subscriptions, now added to the swamp lands already promised, enough to bring the whole amount raised to one hundred forty-one thousand dollars.¹¹

The meeting of the board was to be in Peoria on the seventh of May. A tour of inspection to the proposed site at "the Junction," as Normal was commonly called then, preceded the meeting. The weather had been very rainy and the bare prairie about Bloomington was a hopeless swamp, not liable to make a favorable impression upon critical visitors. Mr. Fell went over the ground carefully the night before, found every mud-hole and every dry ridge, and mapped out a course for the carriages intended to minimize the danger of being mired in a bottomless pit of Illinois mud. When the board made its tour of inspection, Fell rode in the first carriage, and personally directed the driver over the uncharted, soggy ground. The drivers of the other carriages had orders to follow the first undeviatingly on pain of losing life and wages, and on no account to allow the horses to become mired. So conducted, the board made a safe trip and

¹¹The three county commissioners who risked their popularity and tenure of office to secure the normal school (for the pledge had to be made without recourse to a vote) were A. J. Merriman, Milton Smith, and Hiram Buck. They were reelected that fall, but were superseded by a board of supervisors which ratified their action in May. Superintendent of Public Instruction, *Reports*, II, Appendix 22, 371ff.

was returned to the station without accident. The young trees planted along the streets of North Bloomington made a good impression upon the members, it is recorded. From the proposed site they went to the station, where they were to board the train for Peoria. Some half a dozen Bloomingtonians and a reporter accompanied them.¹²

At Peoria there was a similar inspection of the site offered, after which the board sat publicly at the court house. The Bloomington bid was accepted, with conditions attached to secure the somewhat precarious county subscription, which had to be guaranteed by citizens.¹³ Over eighty prominent Bloomingtonians signed this guarantee, Abraham Lincoln drew up the bond, and the pledges were all met.¹⁴

Bloomington was exultant when Fell and his friends brought back to them the news that they had won the new school, and plans for the town that would in time grow up around it were rampant. Ground for the building was broken promptly, the cornerstone being laid on the twenty-fifth of September with all due ceremony. Fell's address on that occasion revealed his own conception of the future of the school. He hoped in time it might become what, for reasons of financial expediency, it was then called: a university. Especially, he hoped that an agricultural school with an experiment farm would eventually become part of the school, and that courses in mechanical studies might be added as opportunity offered.¹⁵

The question of the principalship was a lively issue. Fell, who was a warm personal friend of Horace Mann, had long cherished in his heart the hope of securing his services for the needful West. When planning the "seminary" which was to have been located on the east side of the present Broadway in Nor-

¹²This reporter was Edward J. Lewis, later editor of the *Pantagraph*, and Fell's lifelong friend. The account given, with many incidents not here noted, is found in his manuscript *Life of Fell*. *Weekly Pantagraph*, May 27, 1857. Lincoln Weldon, interview, July 12, 1913.

¹³Superintendent of Public Instruction, *Reports*, II, 359-364.

¹⁴*Ibid*, II, 373-378.

¹⁵The new school was to be financed from the income of the college and seminary fund, then about ten thousand dollars per year, which was permanently diverted for this purpose. Many, not without good ground, objected to this diversion, and it was to answer their representations that the singularly inappropriate name of the Illinois State Normal "University" was used, a name which has been retained even after the founding of the state university. State Superintendent of Public Instruction, *Reports*, I, 123; II, 276; *Illinois Teacher*, III, 395.

mal, he had corresponded with Mann and others relative to its constitution, scope and curriculum. He now asked the great educator if he would consider the presidency of the proposed normal school. Mr. Mann was favorably disposed, and before the location of the school had been actually secured, a subscription list signed by Bloomington citizens promised material aid in raising the salary of Horace Mann were he to become the head of the new institution.¹⁶

The meeting of the board at which a "principal" was to be elected was held in Bloomington. Shortly before the time of meeting, a prominent friend of the Peoria faction came to John F. Eberhart, who with Fell led the pro-Mann party, and told him that it was a matter of political necessity that an Illinois man be elected to the position. "If you elect Mann we'll kill him," said this advocate of local sovereignty; and he further intimated that nothing but the appointment of a Peorian could satisfy the disappointed politicians of that city. When the situation became known to Horace Mann, he telegraphed to Eberhart that he would not be a candidate for the place if there were to be any fight connected with it. Since Fell was equally opposed to dissensions at this critical time and realized thoroly the need of united support for the principal of the struggling institution, the plan of securing Horace Mann was reluctantly given up by his friends, and the Middle West lost the strength which might have accrued to this school through the leadership of the greatest educator of his day.¹⁷ After Mann, Mr. Charles Hovey was gener-

¹⁶The subscription list, dated May 1, 1857, was signed by Jesse W. Fell, K. H. Fell, W. H. Allin, C. W. Holder, Jos. Payne, John Magoun, F. K. Phoenix, John Dietrich, E. Thomas, McCann Davis, and amounted to \$750. Mr. Mann had agreed to accept the presidency at \$2500. John F. Eberhart, in *Fell Memorial*, 24, and interview, June 20, 1913. Mann to Fell, June 23, 1856. President F. Wayland of Brown University to Fell, Jan. 29, 1853. *Illinois Teacher*, III, 107.

¹⁷It has been said that the liberal religious views of Mann were largely responsible for that disapproval which resulted in the vigorous opposition to his presidency, the powerful Methodist faction in the state considering him a dangerous leader of the young in spite of his ability. Certain it is that his abolitionist leanings aroused antipathy among that large number who sympathized with slavery or feared to have the question agitated. Pro-slavery advocates especially remembered a speech of Mr. Mann in which he had vigorously assailed Daniel Webster and the Compromise of 1850. These considerations, combined with the fact that Hovey was able to command powerful forces in support of his own candidacy, were quite sufficient to defeat the large-visioned plan of Fell.

ally considered the best man for the position, although Eberhart, who declined the nomination, and a Mr. Phelps were also considered. On the final vote, Hovey was elected by a bare majority.

Once elected, Hovey set to work with great energy and ability to make the normal school a success. The task was a hard one. School opened in the historic Major's Hall, perched atop a grocery store on Front street in Bloomington. There were twenty-nine pupils on the opening day, October 5, 1857, and more followed soon, the total enrollment for the year being one hundred twenty-seven. There were two assistants, and a "model school" for observation and practice.

The troubles of the normal school began with the panic of 1857. Many of the men who had led in the subscriptions found themselves unable to pay what they had promised, and the commissioners were unable to sell the swamp lands that had been counted upon so confidently. Even the title to these lands was found to be uncertain, and Fell made a trip to Washington to secure the complete and formal deed, in order that the lands might be available in case buyers appeared.¹⁸ He returned early in November, with word that the official confirmation would be sent to Springfield. New complications arose, however, after he had left Washington, and the patents for the thirty thousand acres were not issued until January, 1858. The last payment on the pledge from the county lands was paid in October, 1864.

The uncertainty of realizing money from the county grant, with the scarcity of money in general and the unwillingness of one or two of the wealthy land-owners to turn over their promised acres at the time when they were most needed, made it impossible to make the first payment to the contractors, and work was suspended in December of 1857. Of all the thousands subscribed, not even six or seven could be collected for immediate use. The ingenious expedients of Charles Hovey during the dark days that ensued included every possible scheme for making something out of nothing. The school was without money, without established credit, and without that public support which comes with the tradition of success. Some of its opponents began to suggest that a failure so apparent be abandoned. A few stanch

¹⁸In August, 1855, being himself unable to go, Fell had sent his son Henry, now grown to manhood, to Washington to look after the school warrants for Illinois, W. F. M. Arny being then in the patent office. He (Henry Fell) remained until the last of October, and was moderately successful in his mission.

friends upheld the hands of the determined president at this time, risking their own property by signing the notes it was necessary to make. These men were Charles and Richard Holder, and Jesse and Kersey Fell. Dr. George P. Rex and S. W. Moulton also helped by giving personal notes. The merchants of Bloomington stood loyally by the school, furnishing materials on credit upon the basis of the faith of the friends and guarantors that the next legislature would make appropriations to cover all debts. This was done at the next session, and work upon the building was resumed in the spring of 1859. The school moved into its new quarters in the autumn of 1860, and on October 5 of that year the last brick was laid, with short speeches, cheers, and a free picnic lunch for all.¹⁹

It seemed to Fell and to other friends of the normal school, that a formal dedication of the building would call attention to the institution, and gain it friends and influence. It was a time of great anxiety and uncertainty, and there were some who hesitated to take time and expense for such an occasion during a period of national peril. The dedication, however, which was on January 30, 1861, not only gained the end for which it was planned, but afforded a relief from the tense anxiety of the time, a comforting assurance of at least one great good accomplished, which gave heart and encouragement to all who attended it. Mr. Fell worked indefatigably to make the occasion successful. Invitations were sent to all the prominent men in the state, and great crowds attended from Bloomington and the nearby towns. It was one of the first normal schools built west of the Alleghanies, and the first state-endowed educational institution in Illinois. Governor Yates and Ex-Governor Bebb of Ohio were there, and many lesser stars. The speeches were given in the great hall of the new building, and the feast which crowned the occasion was in Royce's Hall in Bloomington. Mrs. Fell and her cousin, Mrs. Holder, planned and managed the banquet, at which the mayor presided and Mr. Fell was toastmaster.²⁰

Fell's interest in the school continued always, and for many years was actively shown. He attended the public meetings, encouraged the literary societies, and while a member of the board of education superintended the planting of the campus, of which

¹⁹Superintendent of Public Instruction, *Reports*, II, 99-103.

more in another chapter.²¹ Through the years of its gradual growth and establishment he was regularly the man who secured the necessary appropriations at Springfield.

²¹G. B. Robinson, secretary of the Wrightonian Society, to Fell, April 30, 1861. Mr. Fell became an honorary member of this society.

CHAPTER V

POLITICAL ACTIVITIES, 1840-1860

The strong admiration which Fell had for Henry Clay led him to take a prominent part in local politics during the first three years of his residence in Bloomington. He was never of those who consider politics so inherently and ineradicably evil that honest men can have no part in them. Politics interested him in an absorbing way at times. He used the machinery of government as a means of securing good ends, and also probably with a keen appreciation of the fun of the game. And he was one of the few men who do not ask or receive material compensation for their participation in public affairs.¹

Until 1840, his political activities seem to have been mainly along the line of securing various favors for the districts in which he was interested, and in urging the election of men who favored internal improvements. In that year he was much in demand for stump speeches throughout Central Illinois, where the campaign lacked none of that picturesqueness which characterized it in the country as a whole. On one occasion a monster procession was organized in Bloomington, to go to Peoria, forty miles away. The *chef-d'œuvre* of the expedition was a great cannon—Black Betty—drawn by twelve horses, and with twelve veterans of the War of 1812 upon it. The procession stopped at Mackinaw, Tremont, Washington, and other towns on the way for meetings. At Washington, after Fell and others had spoken, General Gridley was called upon for a speech, and responded acceptably. The possibility of entering political life appealed to General Gridley, and that fall he was nominated and elected to the lower house at Springfield. Fell advised him the next year to study law, and had afterward the pleasure of seeing him very successful in this profession. The friendship between these two men was cemented by mutual service and sacrifice, for part of the debts for which General Gridley filed a petition in bankruptcy in 1842 were contracted as security for Fell and others in enter-

¹James Ewing, *Memorial Address to Bloomington Bar Association*, 1887. Manuscript in *Fell Papers*.

prises in which both were interested.² Fell was able later amply to compensate his friend for his devotion, but he never forgot the service rendered at the time of the great panic.

Besides the stump speaking, Fell reached the people by means of a circular letter, dated January 20, 1840, which set forth the evils of the Jackson regime and the necessity for reform in the person and under the leadership of General Harrison. This document is couched in somewhat pompous phraseology, but direct, pointed, and dignified—the latter a characteristic rare enough to be appreciated in the Western campaign literature of that day.

Fell's position on the question of repudiation is worthy of comment. The financial panic of 1837 was of unequaled severity throughout the Middle West, and its effects lasted well into the next decade. Men who were able to weather the first months of the long depression went under after brave resistance, when the depression had continued until their hoarded resources were exhausted. One after another, they took benefit of the bankruptcy law passed by a special session of Congress called by Harrison. Land depreciated in value until the best tracts were sold for a song, and then were offered vainly to buyers at any price.³ Not only were individuals ruined by the panic and hard times; it was many years before the state of Illinois recovered from the effects of 1837. The State Bank, as has been noted, suspended payment in 1837, and failed in 1842. The state's internal improvement scheme did not collapse until about 1840, when the legislature repealed the law. The construction of the Illinois and Michigan Canal had stopped in 1839, and was not resumed for some years. Interest on the state debt was paid regularly, however, until 1841, when payments were suspended until July, 1846. The state became so seriously involved that many recommended the extreme means of practical repudiation of the state debt. This proposal aroused the more thoughtful of the men of Illinois to a strong protest, and none opposed the suggestion more vigorously than Jesse Fell. He published, in 1845, an open letter to the Senate and House of Illinois, which was widely copied and

²The petition was made under the law of 1841, and bears date of Feb. 10, 1842. The schedule of debts amounts to \$52,999.42. See Fell's sketch of Gridley in Duis, *Good Old Times in McLean County*, 262-276.

³So late as 1848, Robert Fell was offered eighty acres near the farm of his brother close to Bloomington for \$3 per acre. Lewis, *Life*, 27.

probably had a considerable influence upon the public opinion of the day regarding repudiation. He recommended the imposition of a slight tax, which he said the people would gladly pay, and which would recognize the moral obligation of the state. In addition to the primary motive of common honesty, he urged that the passage of such a law would relieve the state of the responsibility for the Illinois and Michigan Canal, which the bondholders would then take off its hands.⁴

During these years Fell remained a loyal Whig, working in the party councils when occasion required, but steadily refusing to accept office. In 1850 the Whigs of the neighborhood of Quincy—it will be remembered that this was while he lived at Payson—urged him to stand for representative. “[Your views] on the really important question of the times—the non-extension of slavery, will not only meet the approval of the entire Whigs

⁴*Copy of a Letter upon State Repudiation, Jesse W. Fell to the Senate and House of Illinois, 1845.* The following quotations will serve to show his position, which was that of the more conservative thinkers in the state generally:

“ . . . We stand as on the verge of a precipice, and one false step may precipitate us to a depth of dishonor and infamy from which we may never recover. . . . In such a contingency [practical repudiation] our credit and reputation as a state will not only be gone but, it is feared, past redemption; practical repudiation will have received your sanction, and, in return, will consign the State to a depth of infamy from which she can never hope to emerge; . . . Where, let me ask, is the distinction, in morals or common honesty, between the man who boldly proclaims he will not pay a debt, which he alleges was illegally contracted, though based on a valuable consideration, and him who acknowledges that he justly owes, has the means of making restitution, but refuses to make the first effort to do so? . . .

“Let us inquire, in the next place, what will be the practical effect,—what the objects to be attained by this tax, light tho’ it be. If no other object was attainable, that of merely paying the amount of what we justly owe would of itself be all-sufficient, and should impel us to a prompt and cheerful performance of the act. But this is not all. By so doing you will practically extinguish,—you will relieve the people of \$6,000,000 of their public indebtedness. Our bond holders stand pledged, in the event of the passage through your bodies of a revenue law, imposing a light tax for the purpose of paying a part of the accruing interest on our debt, to take the Michigan and Illinois Canal, with its attendant burdens, off our hands, and prosecute it to completion within a given period. Thus relieving us of about one half of our immense State debt.”

of the county, but will I believe tend to secure a strong vote from the free-soilers, who probably in this county and certainly in the congressional district, hold the balance of power," wrote a local Whig leader to him at the time.⁵ Fell refused the nomination.

A little later he found in the columns of the *Intelligencer* a means of influencing public opinion which was practicable even when his private affairs kept him busiest.⁶ He was untiring in his efforts for his friends, and seems in all cases to have given advice which subsequent events justified. Again in 1854 there was a demand that he be a candidate for the legislature, and another refusal. He was wont to remark to his friends, indeed, that after 1852 his interest in politics was buried in the grave of Henry Clay. That interest experienced a prompt and complete resuscitation, however, upon the passage of the Kansas-Nebraska Act. In common with most Friends, the Fell family had long been abolitionists, and when it became clear that the new Republican party was to be organized about the central idea of opposition to the extension of slavery, they united with it eagerly.⁷

The party was organized in Illinois on the 29th of May, 1856, in Major's Hall in Bloomington, altho several preliminary meetings had been held and the leaders were already well

⁵N. Bushnell to Fell, Aug. 23, 1850.

⁶For instance, Richard Yates, in a letter dated Nov. 17, 1852, explains his methods of winning the election of 1852, and thanks Fell for his defense of him in the *Intelligencer*, and for his help for several years past. Yates' account of the campaign is very interesting. He wrote letters, of which he had 150 copies made, to send to Whigs of influence, both known and unknown to him. After ten days he went through each county in the district, "had a little night meeting in each (this is what the *Register* called my still hunt) and at the end of that time I commenced speaking at the various county seats *on a run*, and in twenty days the whole Whig columns from center to circumference were moving in solid phalanx and shouting victory all along the line—Calhoun was cowed—his friends alarmed—Judge Douglas and Shields and Gregg and Harris &c were brought to the rescue—lying handbills and malignant falsehoods were brought in requisition, but in vain—I went to bed the night of the election conscious of victory."

⁷Jesse Fell to his son, Jesse W. Fell, June 16, 1832. In this letter Fell's father tells of his mother's activity and interest in meetings held to express sympathy for the colored people. Mrs. Fell the elder was an admirer of Mrs. Mott and coöperated with her in her efforts. E. M. Prince states in the *Fell Memorial* that the senior Fell operated a station of the Underground Railroad.

united.⁸ The convention held at that time was supposed to be composed of one delegate for each six thousand people, which gave three delegates to McLean County; but others besides delegates participated freely in its business, especially as there seems to have been practical unanimity concerning what was to be done. People came in crowds from all parts of the state, and there was great enthusiasm, which reached its highest pitch when Lincoln gave the famous "Lost Speech." Local tradition places Fell among the many speakers whose efforts were entirely lost sight of in the splendor of that matchless oration; but his characteristic activity at such times, it may be remarked in passing, was rather the framing of resolutions and the urging of progressive measures privately among his friends, than the making of speeches.

By 1856, Illinois people had come thoroly to realize that the Whig party had ceased to be; but the character and policy of its successor was not altogether clear. In no state, perhaps, was the Republican party made up of elements more diverse than composed it in Illinois. The third congressional district, for instance, comprised in 1856 thirteen counties.⁹ The southern counties, still largely influenced by their southern antecedents, abominated abolitionists. The northern counties had been settled mainly by New England and Ohio people, who brought with them very decided anti-slavery views. Fifty-five delegates, representing the thirteen counties, met in convention July 2, 1856, and nominated Owen Lovejoy, altho McLean and all the southern counties had been instructed for Leonard Swett. Lovejoy was known to be an abolitionist, an ex-member of the Liberty party. Moreover, the southern counties had long yielded the nomination to those of the north, and thought that a sense of fairness should have granted them the nomination when they urged so able a candidate as Leonard Swett. Because of these things, the disgruntled counties held another convention on the sixteenth of

⁸Major's Hall was the third story, now demolished, of a building still (1916) standing on Front street in Bloomington. *Pantagraph*, June 4, 1856. Joseph Medill, "Lincoln's Lost Speech," in *McClure's Magazine*, Sept., 1896. For an account of attempts at Republican organization before 1856, see J. H. Burnham, *History of Bloomington and Normal*, 109-114.

⁹Kendall, Will, Grundy, La Salle, Bureau, Putnam, Kankakee, Iroquois, McLean, DeWitt, Champaign, and Vermillion, of which the present Ford County then formed a part.

July at Bloomington, and nominated Judge T. L. Dickey of Ottawa.¹⁰

Fell had been in the East during the first convention, at Ottawa, but he was known to be strongly in favor of Swett. He had gone on private business, but hoping to attend the latter part of the Republican convention at Philadelphia, a hope which was frustrated by delay in his business affairs. He returned, however, in time to attend the great ratification meeting in the square in Bloomington, on the evening of the convention day. After the "bolters" had spoken, some one called on Lovejoy, who had appeared upon the scene. He came to the front and delivered a speech so powerful that he won the unfriendly crowd completely. It was a wonderful victory for the abolitionist, and for the principles of freedom and equality which he advocated.¹¹

On the second evening after, another mass meeting was held on the square, at which Fell offered resolutions in favor of Lovejoy. The crowd was again carried away with enthusiasm, and readily adopted them. Lovejoy sentiment grew from day to day. Judge Dickey later withdrew from the contest, and Lovejoy was elected by a large majority. It was during this campaign that there sprang up the warm friendship between Fell and Lovejoy, which was to last until the death of the latter in 1864.

During the campaign that followed Mr. Fell made many speeches. The Republican organization in Illinois was rapidly completed, and the party pushed its campaign so energetically that it won the governorship, altho the Democrats were successful in the general elections. During the summer the Bloomington Democratic and Republican clubs exchanged speakers, Mr. Fell being invited to represent his party before the Democratic Club.¹² He was active in the county nominating convention in September. Throughout the summer, however, he seems studiously to have confined himself to local activities.

Among the forces that were powerful in shaping public opinion in Illinois after 1853, were the Kansas Aid Committee

¹⁰*Pantagraph*, June 11, July 2, 9, 23, 1856; April 11, 1868.

¹¹Brush, *The Political Career of Owen Lovejoy* (manuscript thesis, University of Illinois), 12. Prince says (*Historical Encyclopedia of Illinois and History of McLean County*, 1029) that this appearance of Lovejoy had been planned by Mr. Fell, who thought it the best way of reconciling discordant elements in the party. ¹²Adlai Stevenson in *Fell Memorial*, 49ff.

and its allies. General W. F. M. Army, a West Virginian who lived in North Bloomington, was a leader in the work of helping Northern men in Kansas.¹³ The big barn at his home was a depot of supplies for Kansas families sent in by sympathizers from far and near. The town was a recruiting station for immigrants bound for Kansas. The Fells, being anti-slavery people, helped in the work. In 1856, at the national convention of the society held in Buffalo, Abraham Lincoln was appointed on the National Kansas Aid Committee. He declined to serve, however, alleging other pressing duties, and recommended Fell as a substitute. General Army wrote at once to Fell offering him membership, as representative for Illinois, and asking him to attend the meeting in Chicago on July 30. Fell in turn declined, recommending Army himself for the post, to which in due time he was appointed, and served with marked ability.¹⁴

After 1856 Fell's interest in politics did not flag. His map of Illinois, with the senatorial districts carefully inked in, and the party vote for each district for 1858 written in the margin, shows how closely he kept track of conditions and tendencies. He was close to the people, and knew their ideas and their heroes. He was close to the leaders, knowing their ambitions and their motives. He was interested in all public affairs, concerned with the growth of the country, solicitous for the right solution to national problems.¹⁵ In 1857 he was commissioned by the state central committee as corresponding secretary to visit different parts of Illinois for conferences with leaders. He knew the pulse of the state as no one else could.

As has been noted, Fell met Lincoln in 1834-5, when Lincoln and Stuart were serving in the state legislature. At circuit court sessions they were more or less closely associated while Fell continued to ride the circuit, and after he had given up law for real estate their friendship continued. In the campaigns of 1840 and 1844 they were active and friendly Whig partisans. They called each other by their Christian names, and it was noted with

¹⁴Army to Fell, July 22, 1856. *Chicago Tribune*, same date. The *Pantagraph* of July 23, 1856, says that "A. Lincoln is a member of the national committee." The facts were related by Fell himself in a letter to a newspaper, Oct. 3, 1881; *Scrapbook*.

¹⁵Dept. of Interior to Owen Lovejoy, May 25, 1858. Lovejoy to Fell, undated.

amusement by their common acquaintances that Fell never called Lincoln "Abe" after the easy fashion of most Illinoisans. It was one of the Quaker characteristics which gave him a gentle dignity which all men respected, that he did not use nicknames. Lincoln was often at the Fell home in Bloomington, and the two men seem to have carried on a friendly correspondence whenever there was public business upon which they might coöperate.

John F. Eberhart says that Jesse W. Fell and his brother Kersey were the first men to suggest Mr. Lincoln as presidential timber.¹⁶ Be this as it may, there is no question that the idea of joint debates between Lincoln and Douglas originated with Jesse Fell and was repeatedly suggested until the debates became a reality. They were first proposed by Mr. Fell in September of 1854 on the occasion of a speech by Senator Douglas in Bloomington. Mr. Fell's request was then based on a general desire of people to hear the two together. Douglas declined to debate, and Lincoln goodnaturedly agreed to postpone his own talk until "candlelight".¹⁷

There was no doubt among the Republicans of Illinois as to their choice for senator in 1858. They wished to make the nomination at the state convention, a proceeding until then unheard-of. In the McLean County convention, held June 5, Fell offered resolutions "that Lincoln is our first, last and only choice for the vacancy soon to occur in the United States Senate; and that despite all influences at home or abroad, domestic or foreign, the Republicans of Illinois, as with the voice of one man, are unalterably so resolved; to the end that we may have a *big man*, with a *big mind*, and a *big heart*, to represent our *big state*."¹⁸ The resolutions were read amid shouts of approval, and were adopted with rounds of applause. Throughout the state the feeling was the same. At the state convention, held in Springfield on the 16th, practically the same resolutions were adopted.¹⁹ It was at

¹⁶*Fell Memorial*, 26. J. R. Rowell in *ibid*.

¹⁷Stevenson, *Something of Men I Have Known*, 8. Lawrence Weldon, "New Lincoln Stories" in *Chicago Tribune*, Feb. 9 and *Pantagraph*, Feb. 10, 1902. Fell's own account is in Oldroyd, *Lincoln Memorial Album*, 468-472. James T. Ewing tells it in his contribution to the *Fell Memorial*.

¹⁸*Pantagraph*, June 1 and 7, 1858.

¹⁹The comment in the Democratic organ, the *Illinois Statesman*, of June 3, 1858, besides furnishing a typical example of the attitude of non-Republicans toward Lincoln, refers to a "secret caucus" of the night before. Probably the presentation of the resolutions was carefully planned by the leaders at this meeting.

the evening session of this convention that Lincoln delivered his "House Divided" speech. To trace the courses of speeches and replies that followed, as Lincoln and Douglas pushed their rivalry, would be to repeat a story that has already been well and fully told. Of especial interest here is the journey of Fell through the states north and east of Illinois, during the time when the debates were taking place in Illinois, and later. He visited all the New England states but Maine, and New York, New Jersey, Pennsylvania, Ohio, Michigan, and Indiana. Everywhere he found Republicans who were interested in the debates, and who were eager to hear about the man who was successfully defying and answering Stephen A. Douglas. As he sounded the praises of his friend, the conviction grew in him that in a still larger field Lincoln might become the successful rival of the great Douglas.²⁰

When he returned to Bloomington, Fell proposed to Lincoln that he should be the next Republican candidate for president. This was in his brother Kersey's law office. The story of that conversation, which Mr. Fell afterward substantially reproduced, is well known. Lincoln professed to think it a very foolish idea, and declined to write the autobiography for which his friend asked, that he might acquaint people in the East with Lincoln's personal history.²¹ Nevertheless Fell quietly pursued the realization of his "big idea," which other foresighted Republicans shared with him, through 1859. He was secretary of the state central committee for his party, and in that capacity he kept a sensitive finger on the pulse of the state. He found occasion, moreover, in perfecting the state organization, to visit most of the counties, where the people as a rule were eager to see "Abe" Lincoln a presidential candidate. There was no need, apparently, to urge Lincoln's name to Illinoisans. It was in other states that the Lincoln propaganda must be pushed.

Lincoln himself began to think seriously of running for president during the summer, and especially after visiting Kansas and Ohio in the fall. On December 20, when Fell repeated his request, Lincoln gave him the famous autobiography. Without waiting to copy the paper, Fell sent it at once to his friend, Joseph J. Lewis, in Westchester, Pennsylvania. Mr. Lewis' use

²⁰Lewis, *Life*, 64; Oldroyd, *Lincoln Memorial Album*, 472-478.

²¹Oldroyd, *Lincoln Memorial Album*, 477 (Fell's own account). Arnold, *Life of Lincoln*, 155. Tarbell, *Life of Lincoln*, II, 128-130. *Bloomington Eye*, March 6, 1887.

of it forms one of the most interesting chapters in the story of Lincoln's rise to the presidency.²²

During all the years since leaving Pennsylvania, Fell had never suffered himself to lose touch with public affairs in his native state. Through correspondence and through many return visits, even after all his family had removed to Illinois, he kept himself well informed of tendencies and opinions in Pennsylvania.²³ He knew that that state had already, in 1859, become a stronghold of the new party, with opposition to slavery extension and high tariff for the backbone of its platform. He knew that Seward, who held the unswerving allegiance of New York, was not popular in Pennsylvania. He knew that Lincoln, popular in the West, needed the support of the East also, if he were to win from Seward the Republican nomination in 1860; and that the influence of Pennsylvania, direct and indirect, would be an important factor in the coming national convention. Pennsylvania, if won for Lincoln, must know about him.

²²Arnold, *Life of Lincoln*, 14. Joseph J. Lewis to Fell, Mar. 28, 1872. Lewis to J. R. Osgood, same date. This autobiography, with the letter from Lincoln which accompanied it (dated Dec. 20, 1859, and now in the Oldroyd collection), was later the subject of a prolonged controversy between Mr. Fell and his family and Mr. Oldroyd, who made a notable collection of Lincolniana. The manuscript was returned by Lewis to Fell, and was later loaned, with the letter, to Mr. Oldroyd. Mr. Oldroyd returned the autobiography, but has never returned the letter. Memoranda among the Fell Papers, and letters; from O. H. Oldroyd to Fell, April 3, 1882; Shelby M. Cullom to Lawrence Weldon, Aug. 30, 1887. A facsimile of the autobiography was published in 1872 with an introduction by Mr. Fell.

²³Issachar Price to Fell, Downingtown, Pa., Sept. 24, 1838. In this letter, one of the most interesting in the Fell collection, Mr. Price gives a rather pessimistic view of political conditions in Van Buren's administration. "Ritner cannot be elected; he is the most prevaricating shuffling tool that ever *set on a throne*," he says; "promise one thing today and go right to the contrary tomorrow; this he has done in 20 instances to my own knowledge & his great drill Sergeant Thad Stevens is the most barefaced impudent scoundrel now unchained and running at large in the state." This estimate, from which doubtless Fell deduced his own more charitable conclusions, is followed by a prophecy of the vote in the coming election. Speaking of national politics, this Pennsylvania village postmaster predicts: "Abolition will entirely swallow up antiism in fact anti-masonry is defunct—abolitionism takes its place & the party that adopts it as a *test* is destined to *growl* in a *glorious minority* for many a year to come & this will be the end of the great and talented Whig party in the U States."

Joseph J. Lewis was a prominent Republican who wrote persuasively, and who was personally influential in Eastern Pennsylvania. He took care to inform himself rather minutely concerning the Westerner before he prepared, from the autobiography and from other material which Fell furnished, an article which introduced Lincoln to the people of his part of the state. This article appeared first in the *Chester County Times* of February 11, 1860. It was widely copied throughout the state and beyond it, and together with the personal work and speeches of Lewis and others whom he interested, served to acquaint the Pennsylvanians with the career and character of Abraham Lincoln.²⁴

It is interesting to note how the two men who planned Lincoln's introduction to Pennsylvania selected from the material at hand those elements which they knew would count for most with the people with whom they dealt. He was "certainly not of the first families," said Mr. Lewis. His ancestors were Friends—a circumstance with which, it is safe to say, very few Illinoisans were acquainted. They had gone from Berks County, Pennsylvania; but in Illinois no one traced the Lincoln family back of its Virginia antecedents. Descendants of the same stock, Mr. Lewis continued, still lived in Eastern Pennsylvania. He had been a strong Whig leader, a friend of Henry Clay, a great worker in the campaign of 1844, and was master of "the principles of political economy that underlie the tariff" question. Pennsylvania was especially assured that: "Mr. Lincoln has been a consistent and earnest tariff man from the first hour of his entering public life. He is such from principle, and from a deeply rooted conviction of the wisdom of the protective policy; and what ever influence he may hereafter exert upon the government will be in favor of that policy."²⁵ Lewis' account of Lincoln's sacrifice of his own chances of election to the Senate in 1854, when he asked his friends to vote for Trumbull rather than risk the election of Governor Matteson, a Nebraska Democrat, must have had its intended effect with the anti-slavery Republicans of Pennsylvania. He attributed Douglas' success after the debates of 1858 to an "old and grossly unequal apportionment of the districts."

As the time for the national Republican convention drew

²⁴J. J. Lewis to Fell, Jan. 30, 1860. Vickers Fell to E. J. Lewis, June 3, 1896. *Daily Local News* (Westchester, Pa.), Apr. 9, 1883.

²⁵Blaine, *Twenty Years in Congress*, I, 196-207.

near Lincoln's friends realized that, barring the chance of one of those tricks of fate which sometimes change the course of events at political meetings, his only serious rival was Seward. Cameron and Bates had only local support, and were not greatly feared. Leonard Swett, David Davis, and Jesse Fell were the three Illinoisans most active in their efforts for Lincoln. Fell had declined to be secretary of the Republican state committee again, that he might have more time for field work. In the spring of 1860 he had endeavored to secure full lists of names from the entire state for the documents sent out by the Republican national committee. Nothing that could aid in preparing Illinois to play her part in the coming drama was omitted.²⁶ Financial support was assured through a well-organized system of county assessments, collected in 1859 to be ready for campaign purposes. It was planned that a great delegation should go from Central Illinois to Chicago to support Lincoln.²⁷

²⁶Fell, in Duis, *Good Old Times in McLean County*, 280. Circular letter of the Republican State Central Committee, June 23, 1860. This letter was issued by the secretary, Horace White, who succeeded Fell. Circular letter from Fell to chairmen of county central committees, May 8, 1860. Both of these latter circulars show the methodical business administration by which Fell secured an unusual degree of unity and assured resources for the great campaign.

²⁷The account of the convention has been told many times. There is a story of the events of the meeting which because of its connection with Mr. Fell may be repeated here. It is unsupported by any sort of documentary evidence but persists among the older citizens of Bloomington to an extent which at least warrants its repetition. It is to the effect that the Illinois leaders discovered that the tickets of admission issued to delegates and visitors to the convention were almost monopolized by the large delegations from the East which supported Seward. The Lincoln contingent, having gathered with great enthusiasm, was suddenly reduced to the depths of despair by the announcement, on the morning of May 18, that all the tickets had been given out, and that they would therefore have to content themselves with standing outside the Wigwam. The Western leaders gathered quickly for a conference, because the popular enthusiasm for Lincoln of the delegations from Indiana and Illinois was an asset upon which they definitely counted in the session to come. Fell promised a solution, and made good his promise by securing another set of tickets, similar to the first, which he had hastily printed. These were fairly distributed to the leaders of the various delegations, including the Seward men, who distributed them to their adherents. During the morning the Seward men, feeling secure of their seats in the Wigwam because of the tickets they held, organized a monster parade for Seward, led by

Joseph Lewis, with other delegates from Pennsylvania, did valiant work for Lincoln, and nominated Lewis' old friend, John Hickman, for the vice-presidency. General Stokeley was a delegate from Ohio who gave substantial aid.²⁸ The Pennsylvania contingent, returning full of enthusiasm to its own state, pushed the campaign vigorously, Lewis keeping in close touch with Lincoln through his correspondence with Fell. In order to bring to Pennsylvania some of the enthusiasm of the Western men, Lewis tried to secure Davis and Swett as campaign speakers for his state, but failed to convince the central committee of the advisability of this plan. Davis and Swett, of course, were well occupied in Illinois. Owen Lovejoy, candidate for the House, conducted a lively campaign, guided in his methods by the advice of Fell, who had become his close friend and hearty supporter. Fell's own campaign notebook, filled with newspaper clippings and notes for comment and reply, has been preserved, and shows a collection of indictments of slavery, Southern commendations of Buchanan (with caustic comment very belligerent for a Quaker) and clippings about "Bully" Brooks. The summer and autumn were for him, as for many Illinoisans, one long effort to make Lincoln the head of the nation.²⁹

the band which had come with them from New York. Returning to the hall, they found the Western men already admitted in large numbers, and ready to shout for Lincoln, while other crowds filled the streets for blocks in every direction.—Henry Fell in the *Fell Memorial*, 12. Horace White considers the story improbable. Horace White to the writer, April 30, 1914. A good account of the convention from the standpoint of an Illinoisan is found in a letter by Leonard Swett to the Hon. Josiah H. Drummond of Portland, Maine, and dated May 27, 1860. Published in the *Moline (Ill.) Mail*, and later in the *Pantagraph* of Jan. 8, 1909.

CHAPTER VI

THE YEARS OF THE CIVIL WAR

Following his election Lincoln stood the fire of a brisk siege of office-seekers. Joseph J. Lewis was actively corresponding with him and Fell during this time, not only because he hoped to receive some sort of reward for his services in Pennsylvania, but also because a man whom he had cordially disliked, and of whose loyalty to Lincoln during the campaign he had the strongest doubts, seemed destined to receive a cabinet appointment. This man was Simon Cameron. Stimulated by Lewis' representations concerning the character and ability of Cameron, Fell visited the president-elect and told him what Lewis had written him.¹ Lyman Trumbull and others also told Lincoln of Camer-

¹Lewis to Fell, Dec. 17, 1860; Jan. 15, 1861. In view of Cameron's subsequent record as secretary of war it is interesting to note Lewis' unqualified condemnation. "At Harrisburg I found but one sentiment prevalent, and that was, of extreme satisfaction that the incarnation of the idea of public corruption was not to enter the cabinet. Men spoke out who had before been restrained by fear, and the feeling was one of great relief. When we were informed that the place of secretary of the treasury was offered to Cameron, and accepted by him, the information produced grief, and mortification. I felt mortified and humbled. I happened to enter a few nights after a room where a number of leading Republicans were assembled discussing the subject. 'Is this the man,' said one of them to me, 'that you promised us, had such an instinctive horror of corruption that it could not be suffered to come near him? What will you say when you find all the banality of Albany and Harrisburg combined transferred to Washington and pervading all the highest places in the government?' I was urged to undertake in company of Henry C. Casey a mission to Springfield to disabuse the mind of the president-elect, and relieve it from its delusion. I had but to answer that Mr. Lincoln had but to know that he had been imposed upon & he would certainly retrace his steps—that it was hard for a man in his position to resist the pressure upon him from unexpected quarters and from men who possessed his confidence and that it was our duty to make the truth perfectly clear and apparent to his mind so that he might discover it even through the mist which the hopes of personal favor or the fears of personal resentment had raised to obscure it. When the news came that Mr. Lincoln had become informed and had acted on that information the joy

on's reputation and record. The president-elect seems to have given up the idea of appointing him to the portfolio of war by early January, but afterward again altered his plans; and Cameron's name appeared with the other appointments in March.

In the case of Norman B. Judd, who made the nomination of Lincoln for the Illinoisans, Lincoln was more effectively counseled. No paper left by Mr. Fell illustrates better his sound political judgment than the letter of January 2, 1861, in which he discusses with Lincoln the possibility of a cabinet appointment for Judd or Davis. After speaking of his own high regard for Judd, he said that in the state there was much bitterness toward him, particularly in the Whig element of the party. The causes of this included his opposition to Lincoln in his first contest for the senatorship, which was still remembered in a way to make his appointment "a bitter pill to many of your old and tried friends." The Republicans of Whig antecedents wanted to see David Davis in the cabinet; and of his loyalty and devotion there could be no question. But Fell thought it unwise, since Illinois had the presidency, to make any first-class appointments there. He begged Lincoln not to increase the feud between the two elements of the party (just then at its height because of the imminence of the slavery conflict) by appointing the leader of either. Indiana and Pennsylvania should be given cabinet appointments, but by avoiding the gift of any in Illinois friction could be allayed. Davis had agreed with these sentiments in October; nor did Fell add, what was probably patent to him, that Davis might have changed his mind since then. He expressed a strong hope that his friend might be given a "first-rate second class appointment."

Joseph Lewis would gladly have accepted a foreign post. But this was not forthcoming, nor was any other federal appointment until March, 1863, when he was appointed commissioner of internal revenue, a position for which Lincoln had been considering him for about a year.² Fell's friends confidently expected to see him appointed to some place of importance, but such an appointment was as distasteful to him then as at any other time in his life. The circumstances of Lincoln's elevation did not alter his own fixed plans, principles, and preferences,

was great. Many felt that a step had been taken which would save the nation from disgrace and the Republican party in Penna from shame and confusion . . ." See White, *Life of Lyman Trumbull*, 142-152.

²Lewis to Fell, Mar. 1 and 27, 1862; Mar. 13, 1863.

which seem to have been to bring about what he considered desirable events and results, through personal influence rather than by personal administration. At the outbreak of the war he was offered a place as assistant quartermaster, with rank of captain. This, with probably other similar offers, he declined, and continued for a time to carry on his regular business as usual.³

When the certainty of war was clear to everyone, at the fall of Sumter, men who felt the responsibility of leading public opinion bent their energies toward uniting the country in support of the government. The friends of Lincoln in Central Illinois wished especially to hold up the hands of the president by assuring him of popular support. On the day after the fall of Fort Sumter, Mr. Fell hurriedly gathered together a group of the leading men of Bloomington, both Republicans and Democrats, in an upper room on Washington street. He had resolutions ready as usual, which were voted for by everyone except Mr. Snow, who sympathized with secession and had the courage to say so in an overwhelmingly loyal community. Being united among themselves these local leaders next turned their attention to building up popular union sentiment. They had handbills printed and distributed announcing a mass-meeting to be held in Phoenix Hall that night; and before separating, agreed upon a long program of speakers upon whose sentiments they could rely, that there might be no time for possible dissenting volunteers from the audience.⁴ Mr. Spencer presided that evening, and one prominent man after another addressed the people. A great flag draped across the platform gave the keynote of loyalty. The people cheered it enthusiastically, and sang patriotic songs. The resolutions were presented by Rev. C. G. Ames, who called upon those "who in their hearts swore to the sentiments therein expressed" to hold up their right hands in voting. "A response like thunder came up from the densely packed audience,

³Fell to Richard Yates, Aug. 21, 1861. This letter has been lost, but is on record.

⁴Among those who attended were C. P. Merriman and Dr. David Brier, Republicans; Hamilton Spencer, T. P. Rogers, Allen Withers, Dr. E. R. Roe, and H. P. Merriman, Democrats—the last two of the Democratic *Statesman*; and D. J. Snow of the *Times*. The speakers of the evening meeting included James S. Ewing, Col. W. P. Boyd, Dr. T. P. Rogers, Dr. E. R. Roe, Rev. C. G. Ames, Harvey Hogg, and E. M. Prince. The resolutions are given in the *Lewis Life*, 68, and in the *Pantagraph*, Apr. 17, 1861. Dr. Roe's account of the meeting is in the *Pantagraph* for July 29, 1871.

and a thousand hands flashed in the light above the sea of heads, like the drawing of myriad swords.' This meeting, the first of its kind in Illinois, was followed by many in other towns all over the region, and is a type of the means by which the people were stirred to loyal support of the administration.

As the friend of Lincoln, Mr. Fell found himself more in demand as a political power than he had ever been. His old friends found him responsive as formerly; new friends, called to his attention by the circumstances of the times, found him ready and anxious to help where help was needed. Owen Lovejoy called upon him freely for aid and advice; Governor Yates and Lyman Trumbull asked and received suggestions from him. He united with Lovejoy to urge Davis' appointment to the supreme bench.⁵ Yates, who met determined and influential opposition, largely upon personal grounds, especially appreciated his loyal support. Opposition to the governor, at a time when every element in Illinois should have been united in support of the administration, seemed very foolish and wrong to Jesse Fell, and he used his pen and his personal influence to gain better co-operation for the governor.⁶

Fell's relations to Owen Lovejoy, whom he greatly admired,

⁵Owen Lovejoy to Fell, Apr. 1, 1861; Fell to Yates, Apr. 8, June 12, 1861; Lyman Trumbull to Fell, Feb. 1, June 7, 1861; Yates to Fell, Aug. 13, 1864.

Among the letters of this period is one from Fell to Governor Yates, dated Aug. 18, 1864. It called Yates' attention to the fact that there was no practical farmer among those appointed to suggest an application of the funds accruing to Illinois under the Morrill Act, and suggested George W. Minier of Tazewell County, a successful farmer and a forcible writer, as a member of this committee. Letters concerning the appointment of Davis are not now available, but Fell's article in the *Pantagraph* of Apr. 11, 1868, contains a statement of his agency.

An undated petition to Lincoln in behalf of Jesse Bishop of Marion, Ill., who had suffered at the hands of secession sympathizers, belongs to this period. It is signed by Thomas I. Turner, Jesse W. Fell, Richard Yates, W. Bushnell, Richard Oglesby, S. M. Cullom, and others. Kersey Fell seems especially to have interested himself in helping those upon whom the burdens of the war were heavy. A set of letters from him to Governor Yates, dated from Sept. 21, 1861, to Dec. 27, 1864, are filled with requests for passes, money, or permits to all sorts of folk who needed help. (*Yates MSS.*)

⁶Richard Yates to Fell, June 7, 1862.

were especially close during the war.⁷ Lovejoy at Washington and Fell in Illinois and other states of the Middle West found many ways of helping each other; and they liked to compare notes and opinions. Writing to his friend early in October, 1862, Fell said: "Can it be possible that the Almighty, (who will pardon my presumption) is so poor a general as to suffer this war to come to a close without sweeping, as with the besom of destruction, that damning sin that has thus culminated in civil war. We will trust not—and will pray not; at least till the 'old cuss' shall be 'placed'—as Honest Old Abe expressed it—'in process of final' and may we justly add 'speedy extinction.' " Lovejoy replied, "My trust is in God for the nation."⁸

Among the friends of Mr. Fell who by no means shared his own Quaker aversion to war, was the "Fighting Schoolmaster," Charles E. Hovey, the normal school president who led the Thirty-third Illinois out of the schoolroom into the field. Without having had technical training in tactics he proved an able commander. But he was never able to qualify his outspoken New England anti-slavery sentiments, nor did he find any common ground with the West Point officers with whom he was associated, and who were able to understand the point of view of Southern men. He asked and received Mr. Fell's aid in enterprises for which he needed an agent in civil life, while Fell appreciated the opportunity of keeping in close touch with field operations through a man whom he knew to be trustworthy.

His own participation in the war, until now delayed by the pressure of private business and a distaste for military life, began in 1862. He had gone with Hovey to Washington in late June, 1861, to see Lincoln about the organization of the normal school regiment, and to observe the situation there for himself. With Hovey he went out with the crowds which followed the army to the disastrous battle of Bull Run. After the battle,

⁷Lovejoy to Fell, Dec. 7, 1862; Fell to his brother Vickers Fell, Oct. 7, 1862.

⁸Lovejoy selected Fell to prepare, after his death, such a memoir as might seem suitable. In April, 1864, therefore, his daughter wrote to Fell asking him to do this last service for his friend. Fell was also among those who raised money for the erection of a monument, and he seems to have secured payment to Lovejoy's heirs of money owed him. Lucy I. Lovejoy to Fell, Apr. 6, 1864. Circular letter from Princeton, signed by John H. Bryant, C. C. Mason, and F. Bascom, May 10, 1864; Bryant to Fell, Nov. 18, 1865.

while Hovey surveyed the field and interviewed spectators, Fell found congenial employment in helping about the hospitals which had been hastily improvised. He found there a certain Captain McCook lying mortally wounded. He was able to help many, and remained with Captain McCook and his father until the death of the former. Returning from Washington impressed with the magnitude of the coming struggle, the sense of his own obligation to bear a part in it grew as time passed. In the second year of the war he arranged his nursery and real estate businesses for a long absence, and offered his services to the president. Knowing that his talents were not military, and that he had passed the age when he might have been trained into a fighting man, he accepted gladly the position of paymaster, to which the rank of major was attached. The appointment seems to have been a pet project of Lincoln, as his letters on the subject attest.⁹

He accepted the appointment on the 19th of July, 1862, and began his duties soon afterward at Louisville, Kentucky. He took with him as a clerk William O. Davis, who was betrothed to his daughter Eliza.¹⁰ As a friend of the president, he was received among his colleagues with unusual interest, which gave place soon, as Rodney Smith bears witness, to deep respect and admiration. His habit of going about unarmed—the expression of a fixed principle of trusting men—was regarded as a foolhardy concession to these ideals by his colleagues; but there is no record of any attack upon him during the entire time of his service. He employed himself first in mastering the intricate red-tape of the service, after which in August he was sent to Indianapolis to pay the Sixty-ninth Indiana Infantry. From there he went to Springfield, Illinois, which was his headquarters while he paid the Illinois troops then being hurried to the front. Major William Smith, a more experienced paymaster, took Mr. Da-

⁹Lincoln to the secretary of war, Dec. 23, 1861, Mar. 29, 1862. "I really wish Jesse W. Fell, of Illinois, to be appointed a Paymaster in the Regular Army, at farthest, as early as the 1st of July, 1862. I wish nothing to interfere with this; and I have so written as much as two months ago, I think."—Adjutant General's Office, War Department, Washington, File No. F-290-C.B. 1863. See also O. H. Browning to Fell, June 26, June 30, 1862.

¹⁰Rodney Smith to Captain E. J. Lewis, July 15, 1897. The letter is copied in full on pages 73-78 of Lewis' *Life*. Mr. Davis was later transferred to the office of Internal Revenue at Washington, there to serve under Fell's old friend J. J. Lewis. Davis to Fell, Oct. 18, 1863.

vis into his personal employ, giving Fell Rodney Smith, an experienced clerk, who had been in the service for some time. Smith remained with him during the time of his service, and at his request then became his successor.

The official records of Mr. Fell's service, which lasted about eighteen months, show that he remained in Illinois until late in September, when he made a trip to Fort Donelson to pay the Eighty-third Illinois Infantry. After returning to Illinois, he went to Camp Morton in Indiana in November, then spent six months in Kentucky and Tennessee, going from Paducah to Cincinnati about the first of August, 1863. In the spring of that year he had a short leave of absence. Remaining in Ohio after his return to work but a short time, he returned to Kentucky, to Covington and Camp Wild Cat. His last payment was made to the Forty-eighth Pennsylvania near London, Kentucky, on September 18, 1863. The condition of his private affairs was such at that time as imperatively to demand his attention, and knowing that there were others who were capable of doing the work without loss to the service, he resigned at Christmas time. The resignation was accepted, and Fell hurried from Washington to Normal, to look after an accumulation of both private and public business.¹¹

Scarcely had he arrived at home when his friends began to urge him to enter politics. The first public request was a "suggestion" in the *Pantagraph* of December 26, 1863, that he be sent to the next Congress as representative for the eighth district. In an editorial on January 26 his name was suggested again, with a repetition of the arguments in the first article. He replied at once that the public work he had already done had entailed a sacrifice of personal interests which he felt he could ill afford to make, and added, "while the district can boast of a Leonard Swett, my consent to be placed in such a position would indicate a recklessness of the public weal, not to say vanity, that I trust I cannot be capable of." Some of his friends refused to consider this answer final, and made out a petition, signed by a long roll of names, begging him to accept the nomination.¹² Al-

¹¹Major William Cumback to Fell, Feb. 4, 1864. Fell to his wife, Oct. 19, 1862, Feb. 23, 1863. Receipts, 1863.

¹²Mr. Fell, in his endorsement upon this paper, says he declined it "as incompatible with proper attention to my private affairs . . . & for the further reason that I had solicited another and a better man to become a candidate—To wit Leonard Swett." No date; about Feb. 1, 1864.

exander Campbell paused in his advocacy of the "True American System of Finance" long enough to urge Fell to run for Congress; John H. Bryant, probably feeling with Campbell that Fell might take the place of the sadly missed Lovejoy, begged him not to decline. But Fell was firm in his determination not again to enter public life. Shelby M. Cullom was nominated at the convention, and elected over John T. Stuart by a large majority. It may be mentioned here that Fell was again asked to stand for Congress in 1866, and once more refused.¹³

Throughout the war his support of Lincoln, with that of many other of the president's old friends in the West, was unswerving and practical. The partial emancipation message of March 6, 1862, drew from him a burst of loyal and affectionate congratulation, which reveals the whole-heartedness of his faith in Lincoln, at a time when even Illinois was rife with criticism. He took the stump again in the campaign of 1864, speaking with E. M. Prince at a series of meetings in country schoolhouses and village halls. But he declined the post of secretary of the state central committee.¹⁴

The news of the assassination of Lincoln came with a peculiar shock to the Illinois towns in which he had been a familiar figure, and in which there were scores of his personal friends. Fell heard of it as he returned from a business trip. Hurrying home, but not stopping to have old Tom unharnessed from the buggy, he told his wife the sad news, and then started back to Bloomington to verify the report and have further particulars. On the way he met his son Henry, took him into the buggy with him, and begged for details.¹⁵ The day after, the McLean County people expressed their sorrow at a great public meeting

¹⁴The *Pantagraph* of May 23, 1862, has an account of a public meeting held the night before, at which Fell spoke warmly in defense of the presidential policy, then much criticized. In August another great meeting of the same sort was held. Fell to Lincoln, Mar. 17, 1862. *Pantagraph*, Oct. 5 and Oct. 11, 1864. Lewis, *Life*, 80. Telegram from Thomas J. Turner to Fell, July 11, 1864. Lincoln to Fell, Oct. 5, 1860.

¹⁵Henry C. Fell, "When Lincoln Visited Normal," in *Normalite*, June 7, 1913.

held in the court house square, at which Fell presided and spoke.¹⁶

A very dramatic episode gave to the days that followed a lively interest, and may be related here because it illustrates a prominent trait of Fell's character. Rev. Charles Ellis, the pastor of the Free Congregational Church, was a New Englander of strongly abolitionist views. In his sermon of April 23, 1865, he essayed to speak upon the subject of the assassination and its causes. His audience, which numbered many personal friends of the dead president, was perhaps as keenly sensitive to the estimate placed upon Lincoln as any audience could have been. Mr. Ellis began by saying that he believed that before God Adams, Jefferson and Washington were more to blame for the murder than Booth, for they had admitted slavery at the time when the constitution was made. He then blamed Lincoln for so long supporting a constitution which protected slavery, and said that "he had not the moral courage to step forth like a strong man in his might and do what his better nature told him was his highest duty. He sacrificed the demands of God that he might not offend a political party in the land," with much more to the same effect.

In attributing the murder of Lincoln to his own fault in no uncertain terms, Mr. Ellis aroused the indignation of the Bloomington people to fever heat. Members of the congregation were so angered that they were scarcely restrained from creating a disturbance in the church. Mob violence was not unknown in Bloomington during the war, as the Snow brothers could testify.¹⁷ A meeting of the members of the church was held a few days later, for the purpose of demanding the immediate resignation of the pastor. Mr. Fell, however, spoke so forcibly of the

¹⁶On the day after the assassination President Edwards called a meeting to be held in the assembly hall of the normal school, at which Fell presided and spoke, it is said, with singular eloquence of his old friend.

¹⁷These two brothers, with their sister, the president of the Bloomington Ladies' Library Board, were considered to be among the finest people in the town, but were extremely unpopular because of their frank sympathy with the South. On one occasion, when recent recruiting had aroused patriotic feeling to fever heat, a crowd of men and boys bombarded the office of the *Times*, and destroyed it. They were not satisfied until "the crude little press and all the types were scattered on the street below." The Snows sued for damages, but could get no conviction. Luman Burr, interview in *Bloomington Bulletin*, July 6, 1913.

fundamental principle upon which that church had been founded—the principle of free speech—that he dissuaded the congregation from a step which would have denied it. The Congregationalists adopted instead a set of resolutions which he offered, in which they refused to censure the sermon, asserting the right of any man to express his ideas untrammelled in their church; and reproved the “mob” which had caused the disturbance on the Sunday before.¹⁸ Although thus formally vindicated, Mr. Ellis found public opinion so against him that his usefulness in the community seemed at an end, and he resigned within a few days.

¹⁸*Pantagraph*, May 6, 1865. It is said that Dr. McCann Dunn paid for printing of the sermon, that all might know exactly what was said, since highly colored reports concerning Dr. Ellis' words were promptly circulated. John W. Cook says of this occurrence: “This community has often had occasion to feel a sense of pride in the citizenship of Mr. Fell, but on this occasion he illustrated a degree of fidelity to a cherished principle that lifted him to the serene heights of supreme manhood. His heart was heavy because of the national calamity and he mourned the loss of his honored friend, but the principle of free speech could not be violated without his indignant protest.” *A Western Pioneer* (MS).

CHAPTER VII

PUBLIC SERVICE AFTER THE CIVIL WAR

Altho keenly interested in national affairs, it was always for the concerns of his community that Mr. Fell found deepest pleasure in planning and execution. In 1864 the people of the township in which he lived resolved to correct an old wrong that had caused great confusion and expense for many years. The corner marks usually set up by government surveyors could not be located in Normal township, and people came finally to the conclusion that only the outside boundaries had ever been properly run. Judge Davis, C. R. Overman, and Mr. Fell addressed a meeting on the first of October, 1864, and Mr. Fell secured the adoption of a set of resolutions, which, after reciting the conditions, recommended legislative action to secure a resurvey and an adjustment of all difficulties between those whose boundary lines conflicted. A petition was signed, a committee appointed to circulate it, and Mr. Fell was commissioned to present it at Springfield. He did this effectively, and the necessary bill was passed on February 16, 1865. A case in chancery was instituted accordingly, the next September, and a decree for the resurvey secured, the commissioners' report being confirmed by both lower and supreme courts.¹ The decisions which were thus reached in the most friendly and united spirit, doubtless saved endless expensive law suits and hard feelings. Perhaps no service of Mr. Fell to his community required more tact, foresight, and hard work to accomplish than this achievement of the resurvey of the township, or meant more to the people among whom he lived and worked.

On the same day on which he signed the resurvey bill, Governor Oglesby also approved a bill changing the name of North Bloomington to Normal. Under that name it was incorporated February 25, 1867, with a charter which embodied a perpetual

¹Samuel Colvin et al vs. Kersey H. Fell et al., 40 *Illinois Reports* 418. The petition signed at the meeting is among the *Fell MSS*. It contains about twenty-five names, with subscriptions for the expense involved, of from twenty to twenty-five dollars. *Pantagraph*, Oct. 6, 1864. *Private Laws of Illinois*, 1867, III, 628-631.

no-saloon clause.² In making the deeds of sale to lots in Normal (and there is little land in the town which was not at some time owned by Mr. Fell) he had always stipulated that no intoxicating liquors should be sold upon the premises. Others who owned land were in sympathy with his ideas, and it was understood from the first that Normal should always be, as Bloomington was in 1854 and 1855, a prohibition town. In 1866 the growing town required a charter and its people wished it to include a clause guaranteeing the continuance of this policy. The legislature of Illinois was not so ardently temperate as Normal; and interests which hoped to gain advantage from the change, tried to induce it to omit the prohibition clause from the proposed charter. Hearing of this, Mr. Fell called a citizens' meeting at the Baptist Church on November 22, 1866, at which the people discussed the situation and adopted a set of resolutions, ready to hand as usual.³ At the suggestion of John Dodge, a close friend of Fell and a man thoroly in sympathy with his ideas, the people present signed the resolutions, and other signatures were secured before an adjourned meeting held on December 6. At this subsequent meeting a thoro canvass was reported, in which President Edwards of the Normal School had coöperated by securing the signatures of the students. Over nine hundred names appeared on the petition, the names it is said of every man, woman and child of six or over in the town. William A. Pennell was appointed to go with Mr. Fell to present it to the legislature, which granted the charter with the desired clause.⁴

Mr. Fell had been able by careful attention to his affairs largely to free himself of debt by this time, and so felt free to give some time to furthering the political prospects of his friends, and to take a rest which he felt that several years of unremitting labor had earned. Early in July of 1865 he received an invitation from General Thomas Osborn, who was in charge of the Twenty-fourth Army Corps at Richmond, to visit that city as the guest of the corps. He accepted this invitation, and while in the East went to New York and had an interview with Henry Ward Beecher. Upon his return he was busied with the test case

²*Private Laws*, 1867, III, 321-336. The seal was affixed to the charter Mar. 4, 1867.

³The resolutions are given, with an account of the meeting, in the *Pantagraph*, Dec. 19, 1866. Fell, letter published in the *Normalite*, Mar. 26, 1908.

⁴Lewis, *Life*, 57.

for securing the resurvey, spoken of before, and with efforts to facilitate the discharge of certain Illinois regiments.⁵

During the years following the close of the war Mr. Fell devoted much time and effort to the building up of Bloomington and Normal. He planted trees indefatigably, procured grants that improved and enlarged the normal school, and encouraged every enterprise which could bring desirable citizens or increased wealth to the sections in which he was interested. No public enterprise asked his aid in vain, it is said; certainly the list of his interests is a long one. During the first few years of his residence in North Bloomington, he planned to develop the new town as a manufacturing place as well as a school town. In 1857 he was much interested in the production of sorghum, for which people then predicted a great future. He planted it generously, set up a mill, with press, vats and reducing pans, and put his product upon the market. There was not, however, an encouraging demand for it, and farmers generally declined to trouble themselves with the crop, which required an outlay of labor incommensurate with returns. Mr. Fell after a time abandoned the experiment.⁶

At about the same time he secured the location of a foundry at North Bloomington,⁷ but this enterprise, after a career of

⁵C. Macalester to Fell, Nov. 7, 1864. Thomas O. Osborn to Fell, July 1, 1865. J. H. Bryant to Fell, Nov. 18, 1865. Lyman Trumbull to Fell, Dec. 27, 1866. Stephen A. Douglas to Fell, Mar. 21, 1866. Gov. Oglesby to Fell, Sept. 16, 1865. Fell to E. J. Lewis, July 26, 1865, quoting a letter from himself to Secretary Stanton. (Lewis letters, in MSS of the McLean County Historical Association.) These last letters referred to one published substantially in the *Pantagraph* of July 13, 1865, from Lewis, in which he complained of being compelled to lie idly in camp with all his men, after all action had ceased. Lewis could have been relieved at any time, but did not like to leave camp (at Meridian, Miss.) without his men.

⁶In 1842 and 1843, he had been interested in some experiments looking toward the making of sugar from Indian corn. No written account of these experiments remains. His conclusion was that the thing was possible, but not commercially profitable. Interview with Henry Fell, May 31, 1913.

⁷One Blakesly, his partner in this enterprise, built the foundry, and also the huge boarding-house which was to accommodate the workmen. Addison Reeder, a skilled mechanic and inventor, was brought from Laytown to be foreman and manager. Some cast iron fixtures, used in the construction of the normal school buildings, were turned out before the enterprise had to be given up, largely because of the impossibility of find-

many vicissitudes, was also given up, Mr. Fell deciding that Normal was destined not to become a manufacturing town. This was in spite of the fact that in 1867 two coal-shafts had been sunk, and had found coal, in or near Bloomington. Mr. Fell was financially interested in that one which was located near the Chicago and Alton tracks, and which has been operated successfully to the present time. One business venture which was a success from every point of view was the large hotel in Normal which he built in partnership with William A. Pennell. It was a four-story Mansard-roofed structure, with spacious rooms and wide verandas, and a ballroom that made it the social center of both towns. Good hostelries were rare, and this one became a landmark. It was burned in 1872, some time after Mr. Fell had disposed of his share in the ownership.

No enterprise upon which the state entered after the close of the war was of greater importance than the establishing of the state university. It has been noted that from the first efforts, sidetracked for the normal school and later deferred during the struggle between North and South, its friends hoped to have eventually one many-sided institution, wherein training of many kinds might be had. No sooner was the war well over, than the project was again urged upon Illinois. In Bloomington interest was especially keen, for there people thought that now the time was come for the expansion of the normal school into a real university. The funds made available by the Morrill Act would provide for the industrial university of which Turner and Fell had long dreamed.⁸

ing efficient workmen; and Mr. Fell became liable for the greater part of the loss of the venture. The plant was used about 1877 for the manufacture of a patent furnace, by one Ruttan, a Canadian, who was the inventor of a once-popular ventilating system. Neither the furnace nor the stoves, which then and later were turned out of the same factory, found a very good market. William McCambridge in the *Pantagraph*, Mar. 16, 1910.

⁸John F. Eberhart, in his contribution to the *Fell Memorial*, tells of an interesting but unsuccessful attempt to establish a great state university, early in the decade following the passage of the Morrill Act. There was to be a central school in Chicago, "with affiliated institutions throughout the state, especially at Normal. . . . Our plan was to get donations of \$100,000 from each of ten different men in the state and to have incorporated into the constitution of the state at the constitutional convention in 1870, a provision for the maintenance of the university. The \$1,000,000 had been duly pledged. Mr. Fell, himself, pledged \$100,000, and

The first legislative action for the school was a bill authorizing its establishment, and throwing open its location to bids. The bill was introduced in 1865, but was defeated. A similar bill was introduced two years later, providing for elections in counties or cities upon the question of raising money wherewith to make a bid for the location of a state university. This bill passed, and was approved by Governor Oglesby on January 25, 1867.⁹ In the meantime, however, other forces were at work to locate the school definitely at Urbana. After President Buchanan had vetoed the Morrill Bill in 1859 and before Lincoln approved it in 1862, Dr. Charles A. Hunt of Urbana conceived the idea of securing a state school for his own town. A "seminary" building was being erected then at the north end of what is now Illinois Field, and Dr. Hunt's plan was to use it for a larger and better endowed school than could be had by merely local support. He therefore wrote a memorial, which was signed by a large number of Urbana citizens, and which was presented to the legislature in January, 1861. This memorial pleaded for agricultural education on the two-fold basis of the elevation of labor and of public economy. The time was unpropitious for such an enterprise, however, and the memorial came to no immediate success.¹⁰

No sooner was peace restored than the citizens of Urbana set themselves anew to secure the industrial university, as it was then called. Jonathan Turner, long the leader of the movement, hoped that when it materialized this school would be at Jacksonville. Jesse Fell wanted it at Bloomington, a rounding out of the university which had been begun with the normal school ten years before. Several other communities in the state hoped to gain it, and made generous offers for it. But the Urbana people were both earliest in the field, and most resourceful in expediting. They had found six other men in the state who pledged \$100,000 each. I also pledged \$100,000 and found two other men besides myself . . . " John Wentworth, upon whom the two leaders had relied to push the project in the convention, grew cold in the cause, however, and it was given up. Probably Turner's plan to put the state university upon a constitutional basis appealed to Fell as a better idea.

⁹*Public Laws*, 1867, 122.

¹⁰The "Urbana and Champaign Institute" was incorporated by an act approved Feb. 21, 1861. *Private Laws*, 1861, 24-26.

Dr. Hunt entered the army as a surgeon and died at the hospital at Mound City in July, 1863. Joseph O. Cunningham, in the *Times* (Champaign, Ill.) of May 21, 1910.

ents. They introduced a bill definitely locating the institution at Urbana, providing the offer—therein recited—of the people of Champaign County were made good.¹¹ Other towns were indignant at this method, since it gave them no chance to compete. Bloomington felt especially aggrieved, for the success of the Urbana bill meant for them the death of a hope long cherished; and Jacksonville was hardly less angry, because it had supported Turner through the long years of his unsuccessful efforts. Not a little heroic sacrifice had entered into the generous donation of Bloomington in 1857, made when hard times were threatening and war seemed imminent. One of the arguments most used by those who had raised the money then was that in time other schools might be added until a real university were founded.¹²

Mr. Fell's own conception of the educational system of the state was a comprehensive one, involving a university comprising every necessary technical and cultural school, at the head of a system of common schools which included industrial training in their curriculum. Teachers, he said, would profit by the breadth gained by coming into contact with those who were in turn training for other kinds of work; and as education was a field as dignified as that of any other calling, it was practicable to make the normal school one of the colleges in the university. To supplement this theoretical justification, he set to work to raise a subscription which should rival, if not exceed, that of Urbana.

His efforts were now even more earnest, if that were possible, than they had been ten years before. He wrote a memorial presenting the claims of Bloomington, which was received by the legislature about the first of February, 1867. He and a number of others went to Springfield to use what influence they might to assure the acceptance, or at least the consideration, of the bid. The decision hung fire during the greater part of February, while the lobbies of Champaign, McLean, Morgan and Logan Counties pushed their respective claims. The people of Champaign County, knowing the manner of men they had to deal with in Turner and Fell, had elected to the legislature, especially for the purpose of pleading their cause, a man who was almost if not quite Fell's equal in powers of persuasion. This was Clark

¹¹*Public Laws of Illinois*, 1867, 123-129.

¹²*Illinois Industrial University: Report of the Committee* (pamphlet, no date); circular letter, Jan. 25, 1866; J. B. Turner, "Industrial University" in *Jacksonville Journal*, Feb. 8, 1866; subscription lists. All in the Turner Manuscripts.

R. Griggs.¹³ He was successful in his mission; Champaign County won the Industrial University. An inconsequential sop was thrown to the defeated parties in the shape of a supplementary bill, passed March 8, which provided that the trustees might locate the school in McLean, Logan or Morgan Counties if Champaign County failed to fulfill its contract, a contingency which, of course, never arose.

The new institution was, at first, scarcely more of a university than the normal school had been. It was small, poorly endowed, limited in curriculum and service. Its friends wanted to see it really fulfill the purpose for which it had been created. The Northern Illinois Horticultural Society, meeting in Bloomington on March 2, 1870, besides criticizing the struggling institution roundly, passed a resolution which showed its kindlier at-

¹³Petition to the legislature, signed by Jesse W. Fell and fifteen others of Bloomington and vicinity. *Illinois State Journal*, Jan. 17, 1867. The subscription as given in the petition was \$500,000; the *Pantagraph* put it at \$550,000. (Lewis, *Life*, 89). Mr. Fell gave \$15,000 of this, the largest single subscription except that of Judge Davis. There was a site of 140 acres, and many smaller cash subscriptions. Both this and the offer of Jacksonville exceeded that of Champaign County.

No shadow of reproach attaches to the methods used by Clark R. Griggs in winning friends for the Urbana location. There were open accusations of bribery at the time, however, which involved some members of the Urbana lobby. E. M. Prince, in his contribution to the *Fell Memorial* (p. 42) tells the story of the proposal of a bribe to the Bloomington men. He went one morning, he says, to Mr. Fell's room, where Fell was making plans for the day for the Bloomington contingent. He went over the names of the members of the legislature, speaking of the characteristics of each and of the kind of argument that would probably prove effective in each case. One man "said that Urbana had contributed quite a large amount of money to influence the members of the Legislature, but said that he thought a few hundred dollars from McLean County would give it to them, as the members preferred McLean to Champaign. Mr. Fell immediately spoke up and said, 'I am willing to procure a subscription that will be conceded to be the greatest of any of the towns, but I will not contribute a dollar to influence any member of the Legislature to vote for us. I will throw the whole thing up before I will have anything of the kind.'" See Prince's article in the *Pantagraph* of June 7, 1907.

See also affidavits, Jan. 25, 1867; G. W. Minier to Turner, Feb. 10, 1867; *History of the Champaign "Elephant" by One of the Ring*, broadside, dated in pencil, Mar. 21, 1867; certificate of expenditure by Henry E. Danner, Apr. 2, 1867. All in the Turner Manuscripts.

titude toward it. This was that the constitutional convention then in session should endow it by a constitutional provision.¹⁴

But Fell had anticipated this action. Representing the State Teachers' Association, he had addressed a memorial to the convention on the last day of January preceding, which expressed his ideas of possible means and measures. It did not dictate an exact scheme of support and management for the university, altho it suggested several. It appealed to state pride, urging that eight surrounding states had already established universities. It contained also a vivid prophecy of the service now actually rendered the state in the study of soils, entomology, engineering, agriculture, chemistry, mining methods, and the use of waste by-products. But he adds: "To accomplish these grand results, however, we must have, not a university in name—another pretentious high school—but what has not yet been fully organized upon this continent, a University in fact; a grand and comprehensive school, equal in its scope and power of development to our present and future greatness, and in harmony with the advancing civilization of the age. Anything that falls short of this, at least in its scope and constitution, is alike unworthy of us as a people, and of the age in which it is our privilege to live. The day of small endeavors in enterprises of this kind, and with people like ours, has passed away, never to return. WE WANT THIS OR NOTHING."¹⁵ Then follows a very

¹⁴Both Turner and Gregory were at this meeting. The latter invited the members to visit Champaign and see for themselves what was being done at the university. Turner's acceptance marked the beginning of his personal friendship for Gregory, and his hearty coöperation with him in building up the institution. Carriel, *Life of Jonathan Baldwin Turner*, 227-231. Joseph O. Cunningham, interview, May 10, 1914.

¹⁵Saying that its friends were not urging any special plan for providing it with funds, Fell mentions that fact that "some" propose to use for the university the five per cent of the Illinois Central; but another plan, if more acceptable, would be considered by the university party. "In view of the general desire to perpetuate the present relations of the State with the Illinois Central Railroad, in regard to the fund referred to, and of a morbid sensibility in the public mind in reference thereto, whenever any measure affecting the same, however remotely, is proposed, it may be wise, should you determine to provide for such an institution, to abstain from making even any allusion to that fund, and in lieu thereof, to provide that the one-tenth part of the two mill tax, or its equivalent one-fifth of one mill, shall be set apart to that object, after the extinguishment of our present state indebtedness. . . . By the im-

earnest reply to the chief argument being urged against such a plan—that the state was too poor to afford it. The plea was an eloquent one, but it failed to gain its point with the constitution-makers, who declined to saddle the state with any such “burden”.

Besides writing this plea for the teachers of the state, Fell traveled much in the interests of the effort, and wrote many letters. A draft of the proposed constitutional provision is found in a set of resolutions passed by the State Teachers' Association.¹⁶

sition, in this or some other way, of a slight tax, equal to the fiftieth part of one per cent and by deferring the collection of even that till our present bonded indebtedness is fully paid off, would seem to obviate all reasonable objections; and though it postponed for a few years a work already too long delayed, the friends of this measure hope by this concession, as to time, to receive not only your approval, but that of the people to whom your work is soon to be submitted.

... “We not only have nothing of this kind within our limits, but we are surrounded by six states, to wit: Michigan, Wisconsin, Iowa, Missouri, Kentucky, Indiana, to say nothing of two still younger States, Minnesota and Kansas—all of which have State Universities. True, Ann Arbor only has at present any just claims to this high rank; but may we not reasonably hope and expect, . . . that in time some, possibly *all*, of the States referred to may have their Universities in *fact* as well as in *name*? . . .”

... “What we mean by the term ‘University’, in that broad and comprehensive sense used to designate these the highest institutions of learning known in the world, is, in the language of Webster, ‘An assemblage of colleges established at any place, with professors for instructing students in the sciences and other branches of learning, and where degrees are conferred. It is properly,’ he continues, ‘a universal school, in which are taught all branches of learning, including the four professions of Theology, Medicine, Law, and the Arts and Sciences.’ To Americanize such an institution we should, perhaps, in present condition, at least, and acting for the State, have to drop the first of the professions above named, and incorporate, more thoroughly than is usually done, what is known as the *elective* principle—a principle largely adopted at Cornell and elsewhere, and which enables the student to strike out in any given direction he may desire, and thus fit himself for the active duties of life. . . .”

¹⁶Notes indorsed by Fell upon an envelope containing a copy of the Memorial. Henry Wing to Fell, Jan. 3, 1870; *Pantagraph*, Feb. 1, 1871; “‘State University’—To the Members of the Illinois Constitutional Convention”, reprint from the *Pantagraph* and the *Illinois State Journal*, in *Illinois Teacher*, XVI, 65.

In connection with the constitutional convention of 1870 one other occurrence is worthy of mention. Joseph Medill, a member of the convention, wishing to procure the strong influence of Governor Palmer in favor of the proposed change, asked Fell to call on the governor for an expression of opinion. This Fell did, in a letter published in May. About a month later the governor answered in a long letter which was a strong plea for the new constitution. This reply was widely published, and doubtless had much to do with the subsequent vote of the people.¹⁷

Altho his efforts for the location and endowment of the university failed, in another direction Fell succeeded better. The legislature in 1865 authorized the erection of a soldiers' orphans' home, which was to be located by a commission. Fell, deeply disappointed at the failure to build up the longed-for university at Normal, set briskly at work to secure this smaller institution for his own community. There was an initial appropriation of a hundred thousand dollars made by the state, to which he secured an addition of fifty thousand in local subscriptions, heading the list with a generous donation. Rock Island, Decatur, Irvington, and Springfield competed for the home, but the Normal subscription was the largest and the commissioners decided unanimously in its favor, May 5, 1867.¹⁸

Mr. Fell's connection with the Soldiers' Orphans' Home did not end with its location at Normal. Saying that, as homeless and almost friendless children, they would have mainly to depend upon their own exertions for a livelihood after their dismissal from the Home, he claimed that it was both wisdom and obligation in the state to give to its charges not only a shelter, but a training that would make them self-supporting upon reaching maturity. In other words, he wanted the school which was conducted at the Home to be a trade-school. But vocational education was at that time almost unknown in the United States, and was looked upon with disfavor as a dangerously paternal institution. No trades were taught at the Soldiers' Orphans' Home,

¹⁷Palmer to Fell, June 18, 1870.

¹⁸A characteristic story is told of this canvass, concerning Fell and Davis. Seeing his friend as he approached the office, Judge Davis declared to Lawrence Weldon, who tells the story (*Fell Memorial*, p. 40)—"There's Fell. I reckon he wants me to subscribe more money. I won't do it. I won't do it. Reckon I'll have to, though." Fell did indeed induce him to increase his already generous subscription.

and Mr. Fell was thereat much disappointed. "Don't call it my school," he is said to have rejoined when a friend asked him how "his school" prospered. "It is not what I wanted it to be." Thirty years after its founding, those features which he had sought in vain to incorporate, were added to the Soldiers' Orphans' Home school.¹⁹

A somewhat similar project under private management failed to materialize. This was the "College for Soldiers and their Sons" which was to occupy the buildings of Western Union College and Military Academy at Fulton, Illinois. Mr. Fell held some stock in the company advocating this scheme, but seems never actively to have pushed it.

Shortly after the dedication of the Soldiers' Orphans' Home, a competition for a state reform school was opened. Mr. Fell started a subscription in Bloomington, which reached a total of over sixty thousand dollars.²⁰ There was at that time, however, a strong opposition to the policy of concentration which he advocated. The state was still imperfectly unified, and state institutions were regarded as the perquisites of citizenship, to be distributed as equally as possible. The interests of the institution were a secondary consideration. The prejudice against the policy of concentration was so strong, in fact, as to persuade Mr. Fell of the wisdom of abandoning his efforts to locate the new institution in Normal. He did this the more willingly, perhaps, because the people of another town in which he was interested began to hope that they might win it. This town was Pontiac, where Mr. Fell had owned land for many years. He found enthusiastic response when he started to raise a subscription there, and was able to induce the township to vote bonds to the amount of twenty-five thousand dollars, to which the board of supervisors added twice as much in county bonds. He and his brother Kersey offered the site for the buildings, sixty-four acres lying close to the town. The total subscription of over ninety thousand dollars won the location of the school.²¹

¹⁹E. M. Prince in *Fell Memorial*, 41.

²⁰Based on the "Classification of the Normal Bids for the State Industrial Reform School" among the *Fell MSS*, and exclusive of five subscriptions dependent upon a particular location. Lewis says (*Life*, 99) that the subscription was \$35,567.

²¹*Pantagraph*, July 8, 1869. The *Fell Papers* include the subscription list and map used in the campaign. Comments by Mr. Fell are to the effect that "we did not regard such an institution as a *junior penitentiary*,

The last state institution for which Fell and the Bloomington community made a strong effort, was the Eastern Illinois Insane Asylum. The location of this institution was before the people in 1877. Mr. Fell, chairman of the committee appointed to direct the efforts of the Bloomington people, made a report of the advantages of location there, which was printed in the *Pantagraph* of August 3, 1877. Its chief interest for us lies in its advocacy of advantage to the state as a whole rather than to any one region—his old argument of “concentration versus scatteration.” Modern ideas of efficient and economical management counted for so little at the time, however, when opposed to sectional jealousy and local ambition, that the really excellent inducements offered by Normal were declined in favor of the town of Kankakee. Probably the same reasons accounted for the fact that a committee composed of Jesse Fell, Lawrence Weldon, and Hamilton Spencer, appointed in 1885 to investigate the chances of Bloomington for securing the projected home for the feeble-minded, did not make a campaign for the institution.

but, as the name implies, as a *reformatory institution*.” Fell presented to Pontiac the land for a city park, which was named for him in 1915. *Pantagraph*, June 7, 1915, quoting from *Pontiac Leader*.

In 1871 occurred one of those movements for changing the capital which often take place in states in which the center of population is still shifting and uncertain. In March of that year, Peoria made an effort to have the capital moved to that place. The discussion evoked many statements of the shortcomings of Springfield, and when it became evident that the idea was to be thought of seriously, Bloomington people had a meeting in their court house “to consider the question of making an effort to have the capital brought here”. After the explanatory speeches a committee, of which Mr. Fell was a member, was appointed to prepare an appeal to the legislature. The committee probably made inquiries before doing the bidding of the townspeople, for nothing further came of it. Lewis, *Life*, 101.

No account of Mr. Fell's service to his community could be complete without mention of his unremitting efforts for the colored people of Normal. He secured work for them, employing many himself, and then showed them how to save and invest their earnings in homes, encouraging them to educate themselves and their children, and constituting himself advisor and friend in their struggle for betterment. Largely as a result of his interest in them, the colored people of that community have become as a class self-respecting and property-owning citizens. Notes on interview with George Brown, May 15, 1916.

CHAPTER VIII

RAILROADS

Mr. Fell's active efforts in behalf of railroads for Central Illinois seem to have begun in 1835, when General William L. D. Ewing sent a number of Bloomington men a request for their coöperation in building the Illinois Central Railroad. This document was addressed to the leading men of Bloomington, "Gen. Covell, J. W. Fell Esq., Jno. W. S. Moon, Esq., Doct. Miller &c."¹ It apprised them that General Ewing proposed to present at "the called session of our General Assembly" a bill for a railroad from "Ottawa, or some other suitable point on the Illinois river, through Bloomington, Decatur, Shelbyville, Vandalia, and thence to the mouth (or near it) of the Ohio river on the most practicable and convenient route." He asked their opinions on the matter, and indicated a willingness to appreciate the coöperation of McLean County people. Nothing came of this early project. A little later Fell became one of the incorporators of the Pekin, Bloomington, and Wabash Railroad, which was to unite the Illinois and Wabash rivers.²

The Illinois Central Railroad became the backbone of the elaborate internal improvement bill of 1837, was taken up by the Great Western Railway Company in 1843, and was the especial care of Senator Sidney Breese during 1843-1850. Senator Douglas finally succeeded in endowing it by a grant of public lands, in September, 1850, and construction began December 23, 1851.³ In the congressional grant, the termini of Galena and Cairo were stipulated, but the course of the road between these two points was left open. Powerful influences were endeavoring to change it from Ewing's proposed route eastward and westward, and particularly to Peoria and to Springfield. Fell's candidate, General Gridley, elected to the state senate in 1850, worked untiringly to maintain the original route through Bloomington, and finally succeeded in securing a clause in the act of incorporation with this provision. This was in February, 1851. The railroad

³Brownson, *History of the Illinois Central Railroad*, 18-48.

was to pass through Clinton and Decatur, towns in which Mr. Fell was much interested, as well as through Bloomington. In the spring of 1852 the road was started northward from Bloomington to meet the line already begun from LaSalle southward. Regular traffic on the completed road began May 23, 1853.⁴

On the day when ground was broken near David Davis' home for the Illinois Central Railroad,⁵ engineers were locating an extension of the Chicago and Alton (then called the Alton and Sangamon) from Springfield to Bloomington. Work progressed so rapidly that trains were running on this road just five months from the date of location. Passengers from St. Louis could change at Bloomington to the Illinois Central and again at LaSalle to the Rock Island route, and so to Chicago. At Bloomington there was no direct connection for many years between the Chicago and Mississippi, of which the Alton and Sangamon was a branch, and the Illinois Central. The transfer was by cabs and omnibuses.

In 1853 Fell secured the right of way for the Chicago and Mississippi from Bloomington to Joliet, and work began promptly. Fell, who had lands along this route from which he hoped to reap a profit, also secured from O. H. Lee, who had charge of the building of the extension, a contract for himself and his brother Thomas, to furnish ties and cord-wood. The sale of lands in and around Pontiac, Lexington, Towanda, Normal, and Joliet, of course netted him handsome returns for the investment of time and money for the Chicago and Alton. Indeed, the dove-tailing of enterprises, the working-together-for-good of all the forces that made for prosperity, was an accomplishment for which he had a peculiar talent.⁶

In the meantime, ten and a quarter acres of ground had been conveyed to the Chicago and Mississippi for the depots and shops which have since helped to make Bloomington in a small way an industrial center. Many citizens wanted the station-house of the new road built close to that of the Illinois Central, with the point of intersection near the present site of the Wesleyan University. But Fell, with an eye to the founding of a suburban town at the intersection of the two roads, at a point farther west where he and others had secured land, stood for its location at a considerable distance. The Bloomington station

⁴*Bloomington Intelligencer*, May 25, 1853.

⁵May 15, 1852.

⁶O. H. Lee to Fell, July 4, 1853. *Pantagraph*, Apr. 18, 1908.

was located about a mile from the Illinois Central station, and the intersection formed a center for the new town of North Bloomington.⁷ On August 4, 1854, the *Pantagraph* announced that trains were running from Alton to Joliet, the full length of the Chicago and Mississippi.⁸

Central Illinois needed in addition an east-and-west road. In 1853 Fell and others organized a company to realize a projected "Wabash and Warsaw" railroad.⁹ On the third of May he addressed a meeting at Carthage favoring a proposed road from LaFayette, Indiana, through Bloomington, Pekin, and other Illinois towns to Warsaw. Bloomington citizens subscribed fifty thousand dollars to the stock by the middle of June, and the county court ordered a vote on a county subscription of a hundred thousand. The fifty thousand dollars, however, were rejected later on technical grounds, and the order of the court was revoked accordingly. The enthusiasm that had been so general died out suddenly at this rebuff, and was reawakened later with some difficulty.

Mr. Fell had much opposition during this period from those who would not be served by a road of the proposed route. A Pekin paper questioned his motives in advocating a road through towns in which he had holdings. The *Bloomington Times* also attacked him vigorously, but was answered by Mr. Fell himself in the *Intelligencer*.¹⁰ He had by this time become the local director of the proposed road. In September he urged the subscription of the fifty thousand dollars at a meeting at the court house, and the subscription of a like amount to another proposed road, the Quincy and Bloomington. He then entered into an ac-

⁸The tracks of the Chicago and Rock Island were used from Joliet to Chicago until March 18, 1858, when the road transferred to its own tracks. Lewis, *Life*, 42.

⁹The *Intelligencer* of Mar. 23, 1853, gives the names of the corporators of "The Bloomington and Wabash Valley R. R. Company" as follows: David Davis, Isaac Funk, James Miller, A. Gridley, E. H. Didlake, R. O. Warriner, John W. Ewing, W. H. Temple, Wm. T. Major, John Moore, John E. McClun, Jesse W. Fell, J. H. Robinson, A. Withers, Wm. T. Flagg, W. H. Holmes. The issue of April 27 has an account of the meeting at which Mr. Fell was sent "to the western part of the route" to interest people in the venture. See also issues of May 18, July 20, Aug. 10, Aug. 24, 1853; *Pantagraph*, Apr. 26 and June 28, 1853.

¹⁰*Intelligencer*, Aug. 3, Aug. 24, Sept. 12, 1853.

tive personal campaign to secure the money. The city voted it almost unanimously on October 15. Large subscriptions had been made in Tazewell County, Keokuk, and LaFayette, so that the total amount by December 14 was over a million dollars.¹¹

Despite all these efforts the road was not built. In March, 1854, it was announced that steps had been taken to let the contract of construction; but construction did not follow.¹² In the winter and spring of 1855-56 more meetings were held in the towns along the proposed route, and Mr. Fell with others again circulated the ready subscription-list. But people were tiring of the subject, and there was little success. A new company was incorporated in 1855, for the building of the Bloomington, Kankakee, and Indiana State Line Railroad, with Mr. Fell as a leading stockholder and worker.¹³ It also failed to secure popular support. Then in 1857, when the panic had added to the usual chariness in giving to public enterprises, a futile attempt was made. At the November election, a proposal that the county should subscribe a hundred thousand dollars was defeated by a vote of 1570 to 1166.

The east-and-west road was not again actively advocated until 1866, when a number of Danville people began to push the project. There were several groups, each urging a different route, as usual; but those who proposed a road from Danville to Bloomington through Urbana and LeRoy were most active. Another projected road passed directly from Bloomington to LaFayette, through Cheney's Grove. The Tonica and Petersburg line of the Chicago and Alton, already partly constructed, might be deflected, urged Mr. Fell and others, to Bloomington. Fell spoke in favor of this scheme at a meeting on December 29, 1866, using a map—a favorite device—to show his meaning.¹⁴ The resolutions he offered at the close of his speech were adopted. They endorsed the idea of the road and appointed a committee to sound the community concerning the hundred thousand dollar subscription. It proved to be very difficult to secure pledges, partly because many people believed that the road would come in any case, and the spending of so much money was therefore use-

less. An accusation was made against Fell and Gridley, touching their disinterestedness in the matter, to which Fell replied by publishing a letter from T. B. Blackstone, the president of the Chicago and Alton; and the canvass went on. President Blackstone convinced Mr. Fell that the new road would be built through Washington were the money not subscribed at Bloomington.¹⁵ In April, Fell succeeded in securing a joint appropriation of seventy-five thousand dollars from the township and the city. In June the township voted a hundred thousand dollars each to the "LaFayette, Bloomington and Mississippi" and to the "Danville, Urbana and Pekin" roads.

Then followed busy days in Bloomington, for there were three railroads being built. The one from Jacksonville was completed for traffic on August 14, 1867.¹⁶ The Danville road from Bloomington to Pekin was completed in 1869, and to Covington on September 2, 1870, giving railroad communication between Indianapolis and Peoria. The other east-and-west road, of which General Gridley was president and Fell an active director, was less fortunate. Financial support was hard to find, but work began in spite of this in October, 1869. The contractors, Howard and Weston, had promised to finish the road to the Indiana line by January 1, 1871; but the company failed early in 1870. A new contract was let, but it was only partly fulfilled. The Wabash company finally finished the road, which established regular service on July 13, 1872. So at last, after efforts extending over twenty years, east-and-west communication by rail was realized. It was not in a form so direct as Mr. Fell and his colleagues had hoped to have it, but it has proved practicable and helpful.

It has been noted that the Chicago and Alton Railroad established shops at Bloomington soon after entering the town. These shops were largely destroyed by fire on November 1, 1867. Almost at once, it was proposed to rebuild them in Chicago, or some other city where labor might more easily be had. The loss to Bloomington would have been very great, and Mr. Fell with some friends set himself to find the means of making their retention sure. Judge David Davis, General Gridley and Mr. Fell induced R. E. Williams, then local attorney for the road, to go with them to Chicago for an interview with President Blackstone. The latter assured the trio that, altho feeling for re-

¹⁵Blackstone to Fell, Dec. 13 and 28, 1866, Jan. 1, 1867.

¹⁶This road was leased to the Chicago and Alton for 99 years in June, 1868.

moval was strong in the company, he himself favored the retention of the shops where they had been, if only additional land for needed extension could be secured. This reasonable request surprised the Bloomington men, who had expected to be asked for a bonus in money. Returning to Bloomington, the matter was presented to the people at a mass-meeting on November 26. General Gridley and Mr. Fell spoke; the latter had, as usual, resolutions to be adopted and a definite plan for raising the money. Many in the audience signed the guarantee that night, and within a few days the number of guarantors reached 740. After much negotiation, the citizens agreed to give about thirty acres of land, some of which had to be gotten by condemnation proceedings. The railroad company advanced the money to pay for it, at the usual rate of ten per cent. The new shops were larger and better than the old, and correspondingly more valuable to Bloomington.¹⁷

One other enterprise of a similar nature remains to be recorded. In 1867 a number of people began to discuss the building of a street railway from Bloomington to Normal. A member of the board of education who lived in southern Illinois objected that the noise of cars would disturb the scholastic quiet of the community, but people in general thought it a good idea.¹⁸ A company was incorporated, to which was given a franchise to build the railway through Bloomington, Normal, and the campus. It was operated at first by a dummy engine, later by horse and mule power. The cars ran every forty minutes until nine o'clock at night.

The purpose of presenting the somewhat detailed accounts of enterprises in which Jesse Fell was interested, which have filled the pages of this chapter and the preceding one, has been to show by what means the leaders of the era of settlement in the Middle West managed to achieve results which appear marvelous in whatever light they may be seen. Fell was but one of a host

¹⁷To raise the money required, the Bloomington constituency framed a bill authorizing an issue of bonds. It passed the General Assembly, but was vetoed by Governor Palmer on grounds of unconstitutionality. A committee from Bloomington visited Palmer, and after explaining the situation to him, received his promise not further to oppose the bill. They worked to secure a repassage, succeeding only after much lobbying in the senate. The bonds were paid duly, with no question of their validity.

¹⁸P. G. Roots to Messrs. Hatch and Fell, May 23, 1867.

of workers who changed the wilderness into a land of settled institutions within the measure of a generation. Few men, perhaps, united so many qualities of leadership as he possessed; but the difference between him and other men in this respect was one of degree rather than of kind. It was a period rich in social service, altho "social service" had not then become so much of a conscious slogan as it has been since. It was a period when people were closer to the government than they are now, when living was simpler, when the machinery of civilization was formed by popular effort, in a more direct way than has been the case in later years; when men of limited means and many interests laid the foundation for economic and political achievement carefully and solidly, knowing what structure they reared and conscious that what they wrought would shape in great measure the future of their commonwealth. It is as a type of such men that Jesse Fell has real significance for the people of the Middle West.

CHAPTER IX

THE RELIGIOUS LIBERAL

The Unitarian movement in New England had its parallel among the Quakers in the Hicksite schism, begun in 1827 by Elias Hicks, a brilliant and influential Friend. He denied the deity of Christ and the special inspiration of the Scriptures, tenets held by the orthodox Friends. Rebecca Fell, Jesse W. Fell's mother, was a warm friend and admirer of Elias Hicks, and followed him into the sect which he established. The father, however, while he left the orthodox meeting at the same time, did not become a Hicksite, but united with the Methodists, whose creed agreed more nearly with his own personal belief.¹ The father became an exhorter in his new church home, the mother a preacher among the Hicksites. The harmony of the family was in no wise disturbed, for both parents were tolerant and not disposed to exaggerate differences. Some of the children followed the father, some the mother in their religious faith. Jesse, whose special privilege it was to accompany his mother to meeting on First Days and Fourth Days, came closely to sympathize with her in her religious ideas; and his activity as a leader of liberal religious thought in his community in after years, may largely be attributed to the influence of his mother's teaching and example. She was a woman of vigorous mentality, altho of but rudimentary education, as were most of the women of her time. With her husband, she centered the training of her children about the necessity of uncompromising honesty, universal freedom, and fidelity to conviction.²

After removing to Bloomington in 1837, the Fell family continued to hold meetings after the fashion of Friends, altho

¹At this time, the simplicity of dress and manners of the Methodists was very like that of the Friends, and such a transition was easily made, entailing little change of accepted doctrine or custom.

²Jesse Fell to Fell, Sept. 2, 1832. This letter shows the intensely religious nature of Jesse W. Fell's father. It describes a camp-meeting in which he had taken part with great pleasure and profit, and expresses the tenderest wishes for his son's spiritual welfare. Another letter of Fell's father, dated Jan. 6, 1835, shows similar characteristics.

there were few of their faith in the town. The meetings were held on Sunday afternoons at the house, and the attendance was such as often to crowd the rooms. John Magoun, beloved by everyone who knew him and an especial friend of the Fells, came to these Quaker gatherings. The elder Mrs. Fell's voice was often heard in admonition, and her husband's, altho he was totally blind, in song. In his youth Jesse Fell the elder had been a famous singer in his community, and in his old age his voice was still sweet.

Under such influence, it was inevitable that Mr. Fell's religious faith should be both simple and strong. Wherever he was, at appropriate times and places he joined people of many denominations and shades of belief in their worship; and in all his life there appears no word of intolerance for the beliefs of others. His temporary connection with the Methodist Episcopal church at Payson has been mentioned on another page. Upon his return to Bloomington he did not unite with any church, altho he attended the "West Charge" Methodist church, then under the care of James Shaw.³

It is significant of the character of the people of Bloomington that there were in the town a great many of differing views but tolerant dispositions, who during the early years were drawn together for purposes of worship. Westerners were usually affiliated, when they had religious affiliations at all, with the more radically evangelical denominations. In Bloomington there had been a Congregational church of abolitionist leanings for many years, and Baptist and Methodist churches which, altho they contained many families from the South, were for the most part opposed to the extension of slavery. In 1855 the more radical element in the Presbyterian church had separated itself from the mother church, and formed the Second Presbyterian church. Thus clearly, during the decade, the political and sectional prejudices held by people generally affected their church affiliations.⁴

On the evening of the tenth of July, 1859, a group of people who were interested in forming a religious organization to which Christians of differing creeds might belong, met in the office of Kersey Fell. There were about twenty in attendance. Eliel Barber was chairman, Jesse Fell secretary. The result of the

conference was that the secretary was directed to write to Rev. Charles G. Ames, of Boston, asking him to come to Bloomington to look the field over. He came, preached a series of eight sermons, and visited the people who were interested in the possibility of forming a new church. He made his home with the Fells while in Bloomington, and became a very dear friend of that household.⁵

A church, known at first as the Free Congregational Society, was organized on the seventh and eighth of August. Many shades of Protestant belief were included. There were Universalists, Friends, Campbellites, Baptists, Episcopalians, Congregationalists and Spiritualists among the members.⁶ The resident clergymen of Bloomington were invited to preach for them until the new pastor, Mr. Ames, could take up his work.

Phoenix Hall was used for the services of the new church for almost ten years. Here the pastors, for the most part New England men, nurtured anti-slavery sentiments and fostered devotion to the federal union. Rev. Ichabod Coddington, the fourth pastor, was a fearless abolitionist, and spoke boldly his progressive views. During his pastorate, which like those of most Western pastors was a short one, the society dedicated its house of worship, on March 15, 1868. Other ministers succeeded Mr. Coddington—free and fearless speakers and thinkers for the most part, reformers rather than pastors, intellectual guides whose brief stay in the community served to waken thought and to deepen religious faith. Two of them, Rev. C. C. Burleigh and Rev. J. F. Thompson, a New Englander and an Englishman, became strong friends of Mr. Fell. Mr. Burleigh, a friend of the poet Whittier, was a quiet man of great spiritual force, but a man who gained no de-

⁵Ames to Fell, July 15, 1859. Ames to E. M. Prince, Sept. 23, 1899. Vickers Fell to Fell, Mar. 4, 1862. J. J. Lewis to Fell, Mar. 2, 1862. It was Mr. Ames, a radical New England abolitionist, who preached the famous sermon known as "the funeral sermon of John Brown". It was delivered on Sunday, Dec. 4, 1859, was printed in the local press, and afterward in a pamphlet which had wide distribution. His personal estimate of Mr. Fell is given in the letter to Mr. Prince just cited. C. G. Ames, in the *Christian Register*, Mar. 18, 1909.

⁶At a meeting held at the close of the regular service on the seventh of August, attended by about fifty people, Fell presented a set of resolutions looking toward the organization of the church. He and Kersey Fell, Mr. Phoenix, Mr. Stillwell, and others talked, after which the resolutions were adopted. Thirty-two people entered the society the next night, twenty more on August 14. Dr. J. W. Cook, *A Western Pioneer*.

gree of popularity in the hustling Western town in which his lot was for a short time cast.⁷ Mr. Thompson, who followed him, was on the other hand most acceptable to Bloomington, and later became immensely popular in Los Angeles. In speaking of the friendships which came to Fell through his church relations, it is meet here to mention Robert Collyer, with whom he often consulted and who became a valued personal friend.⁸

During the years after its founding the church gradually lost its composite congregational character, and became more homogeneous in belief. Unitarian doctrines came to be the prevailing opinion of the congregation. The name was therefore changed on December 9, 1885, to that of the "Unitarian Church of Bloomington." Mr. Fell remained an active member and constant attendant of this organization as long as he lived.

"Give him," wrote Robert Collyer to Fell in 1873, in introducing an English clergyman who was viewing the sights of America, "if you can, a chance to meet Charles Burleigh. He may not otherwise see one of the Old Ironsides." Rev. Burleigh had preached in Pennsylvania many years before upon the subject of slavery, and the Fells had known of him then. "... last third-day evening we all (a few excepted) repaired to the Meeting-house where we heard a very interesting and eloquent speech delivered by Charles Burleigh on the subject of immediate emancipation. He is employed by the anti-slavery society of Philadelphia to deliver lectures on that subject; he is the most profound reasoner I ever heard. And if dignity of manners, eloquence, and sound reason can do anything to promote the cause, he is well adapted to the office." Rebecca Fell to Fell, Christmas, 1836.

⁸Robert Collyer to Fell, July 3, Sept. 18, Nov. 8, 1866; June 7, 1870; Sept. 15, 1873. A spirited letter upon "Broad-Gauge Theology", containing a clear defense of his liberal beliefs, appeared in the *Pantagraph* of February 15, 1868.

CHAPTER X

LATER POLITICAL ACTIVITIES

The congressional campaign of 1868 was one of especial interest to Mr. Fell. In March, an editorial in the *Pantagraph* had again proposed his name as a candidate for Congress, a proposal which received the usual short shrift from him.¹ The public request was repeated, and again declined. The Republicans of McLean then asked General Giles A. Smith to be their candidate, and he accepted. Fell, however, thought this a false and foolish move, inasmuch as Shelby M. Cullom, the member then sitting, was a tried and proved man. There followed a lively controversy between the Cullom-Fell party and the Smith adherents, waged both in the newspapers and in all public and private places where Republicans gathered for council. The county committee called a mass-meeting for the purpose of selecting and instructing delegates to the district convention. It met on the eleventh of April, but was so tumultuous a gathering that little business could be transacted. General Smith seems to have had control of the party machinery, but the machine was so powerfully opposed by Fell and his colleague Gridley, that none of the routine business decided upon could be forced through. A delegate county convention was therefore called, to meet on the twenty-seventh; and the war between Smith and Fell continued. The friends of Smith published a vigorous attack entitled "The Other Side," to which Fell replied as vigorously.² When it met, the second county convention proved more tractable than the first had been, and nominated Smith as McLean's candidate. Fell continued his exertions throughout the district, however, and on the fourth of May the friends of Cullom were gratified by a vote of five counties to two in his favor, at the district convention. He was elected by a large majority in November.

The story of this congressional struggle in McLean County illustrates a condition of division which was fairly typical of the

¹Lewis, *Life*, 92.

²*Pantagraph*, Apr. 9, 10, 11 for the notice of the mass convention; Apr. 11, article by Fell answering attack in "The Other Side"; other interesting matter in issues of Mar. 25-30, 1868.

situation of the Republican party in Illinois after the war. The unity which only a great common purpose can give, had passed away with the coming of peace. Discontent with the extreme congressional reconstruction policy, altho not then so decided as later, had begun to appear; Johnson's foolish blunders had complicated the situation. Locally, many men aspired to the honors which the Republicans had to distribute. The struggle for the nomination to the governorship, for instance, was unusually sharp. Robert G. Ingersoll, who had expected to be a candidate for attorney general, upon the report of the withdrawal of Palmer decided to try for this higher office.³ In the convention, however, Palmer took the nomination away from him and also from Jesse K. Dubois and S. W. Moulton. Governor Palmer's advocacy of states' rights divided the Republican ranks to some extent, and finally resulted in his leaving the party in 1872, with some adherents.

In 1870 a bitter quarrel arose between Mr. Cullom and Mr. Fell, which resulted in Cullom's defeat in his race for reelection. The cause of this difference was Cullom's appointment of John F. Scibird as Bloomington's postmaster. It will be remembered that the firm of Scibird and Waters sold the *Pantagraph* to Davis and Fell in August, 1868. Scarcely was the sale made, when Scibird and Waters began to plan the publication of a rival Republican paper, which appeared, under the name of *The Leader*, the next December. Fell and Davis regarded this as a breach of faith in their rivals, inasmuch as they had purchased the *Pantagraph* with the understanding that they were buying the Republican paper of Bloomington; and the two newspapers soon worked up a rivalry as spirited as usually develops under such circumstances. Added to this circumstance were other considerations which gave Fell a much stronger reason for resenting Cullom's appointment.

³Ingersoll to Fell, Mar. 25, 1868. Another letter, dated four days later, establishes Fell's position as favoring first Moulton, then Corwin, and last Ingersoll himself. "In the meantime," says the irrepressible Peorian, "dear friend, stick to your tree planting. There is nothing like agriculture and horticulture. Stay in the beautiful fields. Hear the birds sing praises to Corwin and Moulton. I would rather the birds would do it than to have you. I know that you will enjoy yourself a great deal more working in the garden than meddling about the governor question." There is more of the same tenor, and finally this postscript: "Now is the time to plant trees. All should be planted before the 6th of May."

General Gridley had asked in return for the assistance he had given Fell in supporting Cullom in 1868, Fell's influence in favor of the retention of Gridley's brother-in-law, Dr. Cromwell, as postmaster. Dr. Cromwell was a good postmaster, but his appointment by Andrew Johnson was with difficulty confirmed by the senate, as were many other appointments by that unpopular president. Mr. Fell, seeing no good reason for opposing his re-appointment, urged it upon Cullom, and received what Fell understood to be his promise that he would retain him. But for some reason Cullom changed his mind, and after Grant's election Scibird was given the appointment. Added to this was the fact that Fell had urged Cullom's renomination in 1868 with the understanding that he was not to run again. These considerations put Fell in the position of a man who must either vindicate his own honor or impeach that of others, and he took a course calculated to clear himself of suspicion.

Cullom repeatedly acknowledged at the time that he owed his nomination in 1868 to the efforts of Fell and Gridley. The equally vigorous opposition which the *Pantagraph* and its guiding spirit evinced two years later, made his prospects hopeless in McLean County, and doubtful throughout the district. McLean declared for General John McNulta, but the district, after a bitter struggle lasting through the summer, nominated Colonel Jonathan Merriam of Tazewell. Mr. Merriam was a man of fine character but comparatively unknown, and was defeated in November by the Democratic candidate, James C. Robinson. The fact that the division among the Republicans had resulted in Republican defeat did not tend promptly to heal the wounds among the factions. Nevertheless Fell and Cullom found that mutual explanations removed the cause of their personal differences, and they became again the best of friends.⁴

Although his informal and unadvised ways of doing things were distinctively Western and might have been expected to win a degree of approval in that section of the country, the four years of Grant's first administration seem to have aroused as much criticism in his own state as in any other. There was in Illinois a strong Southern element which, altho it had not made the state disloyal during the great struggle, still felt much sympathy for the subdued states, subjected to the indignities of military

⁴Mr. Fell's own account of the controversy to that date is in the *Pantagraph* of July 22, 1870. Shelby M. Cullom to the writer, Mar. 15, 1912.

and carpet-bag rule. Sumner, toward whom Grant had behaved with what most people considered inexcusable injustice, was nowhere more beloved than in the Middle West, where he had long been a popular hero. And the best men everywhere were dissatisfied with the position of the party leaders upon the civil service question.

Carl Schurz was the guiding spirit of the Liberal Republican movement of 1872, and its strongest adherents were in those states where his influence, and that of his friends, was strong. His election to the senate in 1869 was the first sign of the triumph of a new set of ideas in the Republican party. Tariff-reform Republicans joined hands with the reconstruction-reform men, but as tariff-reform men were comparatively few in most of the states where the insurgents hoped to gain a following, this issue was kept in the background. The passage of the Ku-Klux bill in 1871 was so actively opposed by Schurz and Trumbull as to cause these two leaders to draw together and to gather around them the more liberal elements in the party; and this group was further unified by the New York Custom House affair. Nevertheless, as late as in December of 1871 neither Trumbull nor Schurz had openly planned to oppose Grant's reëlection.⁵

Early in January the movement, which as yet had appeared only as a division in Congress, began to take on a more popular aspect. In Missouri and in Southern Illinois, where the Southern element was strong, there was a great deal of fighting among the people in support of Schurz, Trumbull, and Sumner. The Missouri Liberal Republicans held a convention in January, and issued a call for a national mass convention in May. Preconvention speculation as to the presidential candidate of this seceding Republican gathering centered at that time about two men, Lyman Trumbull and Charles Francis Adams. The people of the southern third of Illinois, as well as many throughout the state who remembered Trumbull's service, were very hopeful concerning his chances. Governor Palmer and the influential Jesse K. Dubois were his leading supporters. Adams was probably better known in the nation than Trumbull, and had proved his ability in

⁵Horace White, *Life of Lyman Trumbull*, 269-271, quoting an interview published in the *Louisville Courier-Journal*, Dec. 3, 1871, and *New York Times*, Dec. 6. A letter from Trumbull to W. C. Flagg, among the Flagg MSS, dated Jan. 10, 1872, however, shows that at that date Trumbull was contemplating open opposition to Grant in the Republican party. Flagg was, according to his own statement, Trumbull's only confidant at this time.

the difficult position of minister to England during the Civil War.

Just when Trumbull's prospects were brightest, Judge David Davis decided that he would be a candidate for the nomination. Leonard Swett, the famous criminal lawyer, long an associate and close personal friend of Judge Davis, became his manager, and enlisted the services of Fell in arousing the people of McLean County and Central Illinois to the support of a citizen of their own community for the nomination. Fell, from the first an advocate of a milder reconstruction policy and for that reason thoroly in sympathy with the Liberals, had been a Trumbull adherent until Davis made his decision, when he changed to support an old and dear friend.⁶ By the first of April, then, he was being consulted as to the plans for the Davis campaign at Cincinnati. Swett, ingenious and indefatigable, estimated the strength of the Trumbull faction, and proposed that to counteract it a train load of Davis supporters should go to Cincinnati, that they might influence the nomination there as the Illinois delegations had in 1860. McLean, Tazewell, Livingston, Logan, DeWitt, Champaign, Ford, Iroquois and Vermillion counties were strongly in favor of Davis, and from these counties Swett drew the delegations upon which he mainly depended.⁷ Peoria County, and especially the German population (the strength of

⁶Fell to Lyman Trumbull, Mar. 4, Apr. 11, 1872. (*Trumbull MSS*, Library of Congress.) Trumbull to Fell, Mar. 9, 1872. Mr. Fell's sympathy for the once oppressed black man did not blind him to the shame of the existing oppression of white men in the South. A letter to James G. Blaine, written Mar. 3, 1885, but possibly never sent, shows plainly his ideas upon the subject, and contains some very entertaining comments. After referring to the failure of Republican reconstruction, he says: "Unfortunately the Democracy of this country neither learns nor forgets much, and without outside aid, I have slender hopes in that direction." He thinks reform must come through some liberal leader. "As possibly you may know, I was quite intimately acquainted with Abm. Lincoln, & in a feeble way did something in 1858, 9 and 60 in bringing him before the people as a presidential candidate. In the enclosed I have ventured to say what were some of his views touching the matter in hand—reconstruction. Had he lived doubtless they would have been modified. . . . Whilst you are not where many of us would have you, are you not in a position where you can be almost as influential? Your 2nd vol., in which you will discuss this very question, is yet to be published. Why not give this matter your *patient, very best thought?*"

⁷Swett to Fell, Apr. 1, 1872.

the Republican party there), would accept any man who might be nominated, in the opinion of Robert Ingersoll.⁸

Early in April a number of disaffected Republicans met at the home of Horace White in Chicago, and agreed to issue a call for the Cincinnati meeting, signed by as many influential men as might be induced to join the movement. As this followed the one already issued by Missouri (and was copied from the one issued in New York), it was called a "Response." It appeared first in the *Chicago Times*, April 17, 1872. Thirty-eight men, including Gustav Koerner and Horace White, Dubois, Miner, Jayne, and Fell, signed the call as first published, and within a few days a longer list appeared, comprising the names of hundreds of Illinois Republicans.⁹ Palmer, at first inclined to favor the Regulars, decided in March to espouse the new cause, and declined the Regular Republican nomination for the governorship, which was accepted by Oglesby.¹⁰

Trumbull kept Fell informed of the trend of affairs in Washington, while Fell wrote him of the local situation.¹¹ Trumbull

⁸The letter from Robert Ingersoll to Mr. Fell, dated Peoria, Apr. 6, 1872, expresses with remarkable frankness that would-be statesman's resentment of his rejection by the people of Illinois. "You must not expect me to make a speech at Cincinnati," he says. "I am done. I can conceive of no circumstances under which I would make a political speech. If ever in this world a man was thoroughly sick of political speaking, I am that man. Understand me, I am an admirer and a friend of Judge Davis. I want to see him president of the United States and I believe he will be. And what little I do will be done for him. I am going to take no active part for anybody. For some reason, the leaders in politics are not my friends, and never have been. My only ambition is to get a living and to take good care of my family. The American people have lost the power to confer honor. . . . Leonard Swett wrote me upon the subject of going to Cincinnati. I wrote him that I was sick of politics. By the way, if his letter had been about one-tenth as long, it would have been infinitely better. His letter is good; but too much of it. All his points could have been made in one column. A letter never should be so long as to require an index."

⁹White to Fell, Apr. 10, 1872. Fell to Trumbull, Apr. 8. *Chicago Times*, Apr. 17, and *Pantagraph*, Apr. 19, 20.

¹⁰*Carlinville Democrat*, Apr. 17. *Pantagraph*, Apr. 18. On the 23d of April, Palmer delivered a very influential anti-Grant speech at Springfield, which served greatly to strengthen the forces of the Liberals.

¹¹Fell to Trumbull, Apr. 8, 11, 1872. (*Trumbull MSS*, Library of Congress.) Trumbull to Fell, Apr. 11, 16, 1872. Trumbull's letter of April 11 spoke of the Cooper Union meeting, at which Trumbull and

would give no formal consent to the use of his name before the convention until late in April, apparently with an unselfish desire not to hamper the success of the reform wave by introducing personal factions. Indeed, he tried to impose on other leaders an entirely impracticable policy of entire silence with regard to candidates until the meeting at Cincinnati.

Meantime the Davis group was vigorously pushing its candidate in the only region in which he could command much support; for, being a jurist and not a political leader, and being but little known throughout the country, his strongest claim to recognition lay in his having been the personal friend and appointee of Lincoln,—a claim that amounted to little except in Illinois. Since men with even less fame have succeeded in winning nominations from the lottery of convention chance, Swett and Fell had lively hopes that with a good delegation of local supporters they might carry the day in Cincinnati. The Democrats, strong in Illinois, were rallying to his support. Among these was Adlai Stevenson, a man of considerable influence and a neighbor of Judge Davis, who with his adherents formed part of the Davis party at the convention. Swett was a skilful manager, and by convention time had gained half the Illinois forces for Davis. The Labor Reform party had already nominated him for president in February.¹²

Returning from a tree-planting expedition to his Iowa lands just before the convention, Fell preceded by a few days the delegation which started from Bloomington at five o'clock on April 29. Judge Davis' generosity in providing facilities for the attendance of his supporters made the following a large one; contemporary accounts say it was also a very noisy and confident one. About 550 men from Bloomington and vicinity went to Cincinnati; the entire Illinois contingent numbered over a thousand.¹³

The Davis party, ensconcing itself early at headquarters and marshalling its forces in well-organized companies which gave a strong impression of confidence and success, seemed to lead all others before the convention opened.¹⁴ There was an under-

Schurz both spoke to an immense audience, and said that the movement had attained such proportions that no one faction could then control it.

¹²Stanwood, *History of the Presidency*, 336.

¹³*Pantagraph*, Apr. 10, 13, 17, 19, 27, 30, and later issues.

¹⁴"It is obvious that the Davis crowd is the calmest, the most confident, and the best organized and disciplined. They pitched their tents

standing—in which it is natural to suspect the old combination of Lewis and Fell—that Davis should have first place, and Governor Curtin of Pennsylvania second; an arrangement which Curtin's own ambition to head the ticket brought to naught. Adams, by far the most able and best prepared of all possible candidates, was unpopular in the West because of the very qualities which made his strength—his distinguished ancestry, his long and successful diplomatic service, his thoro education and statesmanlike qualities. His opponents reviled him as an "aristocrat;" to which his friends answered by inquiring with asperity if it were in the Constitution that the president had to come from Illinois?

The "hordes" from that state had but a fictitious strength, for they were divided into three factions, supporting Palmer, Trumbull and Davis respectively. On the twenty-ninth of April there was waged an all-day fight among the Illinois leaders, who could arrive at no kind of agreement. Swett and Fell found themselves pitted against White and Bryant, the capable Trumbull managers. On the thirtieth—Tuesday—the leaders decided to divide the Illinois vote among the three candidates. They called a meeting at three o'clock in Greenwood Hall. Dr. Jayne of Springfield, a Trumbull supporter, issued the call. Fell presided, and the secretary was a Palmer man. About a thousand

the earliest, and have worked up in detail all the strong points of their candidate and all the weak points of his rivals.

"It is claimed that Davis is the only man in the crowd who is personally popular. Adams is aristocratic, Brown belongs to the 'hurrah' school, but has few warm friends; Trumbull is cold as a fish; Cox is phlegmatic and Greeley is pudgy and eccentric. 'But Davis,' says Jesse Fell, 'is a man who is beloved by those who know him. I have known him personally and intimately for thirty years, as I knew Lincoln, and he is just such an honest, faithful, straightforward, incorruptible man; and he possesses the same personal magnetism. He would give us the same enthusiastic campaign and the same overwhelming victory. All of those who were old Abe's associates before 1860 are now asking Davis' nomination. He now lives in Central Illinois, and has made two million dollars in fair dealing, and he hasn't an enemy in all that region, nor in the world. The last two times he was elected Judge without a single dissenting vote from either party.['] This is the way his friends talk; and Fell is one of the sincerest of men, and his moderation gives weight to his words. Davis seems ahead at this hour. Curtin is to get the second place, in consideration of giving Pennsylvania's vote to Davis for the first."—*Chicago Post* of Apr. 28, quoted in *Pantagraph*.

Illinoisans attended the meeting, and came to an agreement concerning the division of the votes.¹⁵ There was a street procession for Davis after the meeting, and great enthusiasm. In the evening an adjourned meeting was addressed by Judge Wentworth and John Hickman, the latter from Pennsylvania.

In spite of all these well-laid plans Davis was foredoomed to failure, the leaders in the party being uncertain both of his ability to attract the popular vote and of his interest in the particular reforms they advocated.¹⁶ Starting with a vote of ninety-two and a half, he lost steadily, retaining only six in the final ballot. His supporters were scarcely less disappointed than was Schurz at the failure to nominate Adams or Trumbull, both men far more likely to carry the Liberal banner to victory. The "Gratz Brown trick" by which Greeley won the nomination in spite of his eccentricities, his extreme views, and the lack of confidence of his colleagues, seemed to stun the party leaders everywhere.

Governor Palmer was among the first to recover from the shock and to shape a definite program. Assuming that despite personal disappointment the Davis supporters would rally to the ticket, he wrote to Fell asking for a survey of the field in his county and estimates of Liberal strength, and asking his support for Greeley.¹⁷ Palmer was personally much attached to Greeley, who had befriended him in the *Tribune* the winter before, and was therefore the more willing to urge the disgruntled into self-forgetting efforts for the cause. A state convention was to be arranged for, and strong efforts would be necessary to popularize the erratic editor of the *Tribune*, against whom the Middle West still remembered his harsh criticisms of Lincoln. With Adlai Stevenson, leader of the Democrats, Fell arranged a mass-meeting to ratify the nomination. This was held on May 12. Fell

¹⁵Twenty-one were to go to Davis, eleven to Trumbull, and ten to Palmer. *Cincinnati Commercial*, May 1; *Chicago Times*, May 1; *Pantagraph*, May 2.

¹⁶Horace White attributes the failure of Davis to "the editorial fraternity, who, at a dinner at Murat Halstead's house, resolved that they would not support him if nominated, and caused that fact to be made known." *Lyman Trumbull*, 380-381. A letter from one of the McLearn County delegates to the *Pantagraph* of May 3 says that "It is believed, and is doubtless true, that Belmont's visit here resulted in buying every Cincinnati paper as well as those of Louisville, to oppose Davis at all hazards." This letter is dated 1:30 p. m., Thursday.

¹⁷Palmer to Fell, May 8, 1872.

presented the ratification resolutions with a speech, which was followed by speeches by Adlai Stevenson, General Gridley, Major Sterlein (speaking for the Germans), Dr. Rogers, and others. A letter from Governor Palmer was read. By the end of the meeting, it is fair to assume that the leaders themselves were almost persuaded that they wanted Horace Greeley to be president.¹⁸

Horace White of the *Chicago Tribune*, staunch Trumbull man that he was, entered heartily into the Greeley campaign through loyalty to a cause which he did not feel justified in abandoning because of poor leadership. He wrote to Fell in late May to tell him that it had been agreed at the state convention (which Fell did not attend) that the Illinois member of the national executive committee was to be Jesse Fell. This appointment was declined, Mr. Fell doubtless feeling that he could not effectively serve a man of whose fitness for the presidency he was not sure.¹⁹

Nevertheless his personal relations with Greeley during the summer and autumn of 1872 continued to be friendly, and while in New York late in November, he was granted one of the last interviews which that sadly disappointed and broken man could have given to any of his friends.²⁰ Fell himself gradually withdrew from active participation in politics after the Cincinnati meeting, feeling that the day of his service in that field was past.

¹⁸*Pantagraph*, May 7, 1872, for Fell's declaration in favor of Greeley; May 9, call for a ratification meeting; May 13, account of the meeting.

¹⁹White to Fell, May 28, 1872.

²⁰Greeley to Fell, Nov. 23, 1872. The note, in Greeley's altogether inimitable scrawl, is very characteristic:

Dear Sir:

Call at the Tribune office at 4 P. M. (Sunday,) second floor on the south side. Knock and it shall be opened.

Yours,

Horace Greeley.

Mr. Fell, of Illinois, Astor House, city.

CHAPTER XI

THE TREE-PLANTER

It was J. A. Sewall who, when the etherialized earthiness of Elizabeth Stuart Phelps' *Gates Ajar* had set every-one to discussing his idea of heaven, replied to a young woman who had asked him if he thought there were trees in heaven: "I really don't know, but if Jesse Fell gets there and finds none, he will hunt around and find some somewhere and plant them."¹

The remark shows the extent to which Mr. Fell and tree-planting were associated in the minds of those who knew him. It was his great passion, perhaps more than anything else his life-work, to set trees in the bare prairie and watch them make of it a garden. From his first months in the new land, when the bleakness of its prairie struck his eyes with especial force, used as they were to the rolling wooded stretches of Pennsylvania and Ohio, he looked forward to the planting of trees. That there were no trees except along the streams was, to him, the one disadvantage of the prairie.² Therefore he planted trees in the towns in which he owned land. He lined the streets of Lexington, Clinton, Pontiac, and other places with rows of maples and elms. Wherever he held a block of lots, there clumps or rows of trees marked the land that Fell owned.

But at no other place did Mr. Fell plant trees with quite the loving enthusiasm which he gave to that work in Bloomington and Normal. In the summer of 1856, when visiting in West Philadelphia and Germantown, he was especially impressed with the beauty of the streets there. Germantown was shaded by stately old trees, but West Philadelphia was a new town, already beautified by careful and extensive planting. Vowing that he would make his own town in Illinois as lovely as West Phil-

¹J. A. Sewall to Fannie Fell, March 15, 1909.

²Fell to his parents, Nov. 17, 1833. The settlements were built in the edges of the groves, he says, in some places extending two miles into the plain. "As the settlements move out into the prairie, people will turn their attention to the cultivation of the forest trees. This in some neighborhoods has already been done." A. W. Kellogg in *Pontiac Sentinel*, Aug. 29, 1889.

adelphia, Fell planned a comprehensive planting campaign, which he began to put into effect the next year.³

His first move was to secure a special act from the legislature to permit the fencing of young trees planted in open streets, for their temporary protection.⁴ His desire was to plant double rows along all the streets, with something like the spacious prodigality of Hadley, Massachusetts. But North Bloomington streets were not surveyed upon so generous a scale, and so only a few streets could have double rows. Even so, twelve thousand trees were set out in Normal before a single house was erected.⁵ The stimulus and example so given, together with the ease of acquisition afforded by the nurseries, made planting a fashion. People vied with each other in making their private grounds beautiful. They quoted Mr. Fell's version of an old couplet—

"He who plants a tree (*and cares for it*)
Does something for posterity,"

and acted upon its suggestion. Bloomington had already become known as the "Evergreen City," and Normal came to share in the name. But evergreens do not attain a permanent growth in prairie soil, and of late years the greater part of the conifers so enthusiastically planted by that generation, have given way to the more adaptable maples and elms.⁶

Many of the trees planted were from Mr. Fell's own nurseries. Unsold lots were utilized as branch nurseries, and the noble Fell Park, with its groves, lawns, drives and gardens, set an example of beauty and gave Normal a place of recreation. Mr. Fell personally supervised all planting, and it is due to his great and loving care that of the trees suited to Illinois conditions, scarcely one has died in the half century since their planting. The original twelve thousand trees were increased to thirty-five thousand before many years. It is to be noted that long before the transplanting of large trees became a common feat, Fell invented a variety of huge cart which could be used for this pur-

³Lewis, who tells this anecdote of Mr. Fell (*Life*, 54), was with him during the drive through West Philadelphia when this resolution took form.

⁴*Laws of Illinois*, 1857, I, 509. Approved Feb. 13, 1857.

⁵*Pantagraph*, May 27, 1857; July 26, 1865. Raymond Buchan in *Pantagraph*, Mar. 16, 1898.

⁶Henry Shaw, "Evergreens," in *Pantagraph*, July 19, 1854.

pose, and full-grown trees were transplanted in Normal to beautify the homes of those who wanted results quickly.⁷

From the first, Mr. Fell assumed the responsibility of looking after the grounds of the Normal School. He wanted to have planted upon its campus every tree that would flourish in Central Illinois, that the studies of botany and forestry might be pursued there to advantage. He insisted, at a time when expert advice upon æsthetic matters was not highly valued, that the grounds should be planned by a professional landscape gardener, and secured the services of William Saunders of Philadelphia, who had planned his own grounds at Fell Park, for this purpose.⁸

The rather elaborate plans of Saunders were not carried out by the board of education during the first hard years, when the school was struggling for life. Year after year passed indeed, and the campus remained almost as bare as in the beginning. Finally, to secure the realization of his hopes and plans, Mr. Fell became a member of the board of education in 1866, continuing until 1872. He secured, with the coöperation of interested friends, the passage of a law which went into effect February 28, 1867, relative to the planting of the campus.⁹ This act included an appropriation of three thousand dollars, and with the prospect of this cash assistance he set to work. The entire campus was subsoiled and plowed during the spring and summer of 1867. Before his official work had begun, Mr. Fell had planted some trees upon the grounds; in 1868 he set out 1740, and 107 more the next year. Saunders' plan was followed as closely as circumstances permitted. In 1870, patches of oats and potatoes yielded a small income for use in defraying the expense of this planting. Even with this help, the appropriation was insufficient, and the work had to be completed at Fell's own expense. Having finished as nearly as was then possible the work which he regarded as peculiarly his own, he resigned from the board.

⁷Lewis, *Life*, 55. Raymond Buchan, of Osman, Illinois, set out most of the trees under Fell's direction. "He was the best man I ever knew," said Buchan of him. *Pantagraph*, May 27, 1857. John Dodge, "Concerning Jesse W. Fell," in *Fell Memorial*.

⁸Saunders to Fell, Oct. 15 and 29, 1858. Saunders advised that a nursery be started upon the grounds, a plan which was carried out in a small way. The planting plans (for which Saunders charged \$65) are among the Fell papers.

⁹*Public Laws of Illinois*, 1867, 21.

In 1885 he became interested in the efforts of Dr. Stennett of the Northwestern Railroad to induce railroad companies to plant trees for ties. The more scientific control of the supply of wood for railroads had been, years before, a hobby of his own.¹⁰ Mr. M. G. Kerr of St. Louis, also interested in the project, asked him to write for the forthcoming report of the bureau of forestry, which Kerr hoped to make of commercial value. So far as known, this article was never written, probably on account of the condition of Mr. Fell's health.¹¹

His interest in trees led to his friendship with Henry Shaw of St. Louis. For Jesse Fell alone, it was said, would this rigid Presbyterian Puritan open his famous garden on the Sabbath. Then the two men would walk around together, admiring new or particularly fine specimens, and discussing varieties and culture. Sometimes Mr. Fell took his son Henry with him on these week-end trips to St. Louis.¹²

Mr. Fell's last extensive venture in real estate was so essentially a tree-planting enterprise that it may best be related here. In 1869 a number of Bloomington men became interested in Iowa lands. As the representative of this group of men, Mr. Fell went to Iowa that summer, and selected a tract of about forty sections—more than twenty-five thousand acres—in Lyon County in the northwestern corner of the state. Even in its unimproved state this section of the country was exceedingly attractive. "In thirty-two of the thirty-seven states comprising our union," said Mr. Fell in describing it, "I have never beheld so large a body of surpassingly beautiful prairie as is here to be found. There is absolutely no waste land, and scarce a quarter-section not affording an admirable building-site."

The plan of the proprietors was to survey a town in the center of their holdings, and to start the work of improvement on each farm by breaking a few acres of land, and by planting trees and willow hedge.¹³ The town was named Larchwood, and the

¹²Henry Fell, interview, May 31, 1913.

¹³Lewis, *Life*, 104. The original company included, besides Mr. Fell, Charles W. Holder, John Magoun, R. E. Williams, A. Burr, E. H. Rood,

settlement came to be known as the Larchwood Colony. For many years Mr. Fell devoted much time each spring and fall to personal supervision of the improvements there. As in Normal and other places in Illinois, he did not trust the work to employees, but superintended the setting of the trees himself, sometimes helping with the actual labor. The improvements accomplished were unusual. In May, 1873, Fell set out a hundred thousand trees and cuttings, distributed through eight sections of land. At that time a hundred fifty thousand trees had already been set out, and a tract of forty acres in the center of a number of sections insured a "start" of ten acres of broken ground to every immigrant who bought a quarter-section. Larchwood farms at that time were selling at from four to six dollars the acre.¹⁴

The history of Larchwood serves to illustrate one of Jesse Fell's notable characteristics. General Gridley, who knew him well, was wont to say of him that he was never mistaken in his estimate of the ultimate value of a piece of land, but that his eager nature greatly discounted the length of time which would elapse before that value was realized. Imaginative and enthusiastic, full of faith in the development of the West, he calculated upon an increase in value far more rapid than the actual rate of settlement justified. What he thought would be an accomplished fact in ten years, the slow moving forces of development realized, perhaps, after thirty or forty. Larchwood, with its unusual advantages, did not grow as its promoters hoped it would, and about 1880 the Illinois owners decided to sell what was left of the tract.¹⁵ An Englishman, Richard Sykes, who dealt exten-

Richard Edwards, Milner Brown, and Daniel Brown. The willow hedge was planted because it would grow quickly, and later furnish fuel. Fell, *To Hon. George D. Perkins, Commissioner of Immigration for the State of Iowa*, June 27, 1880. (A printed letter.)

¹⁴An account of a settler appeared in the *Pantagraph*, Apr. 12, 1872. One by a settler in a neighboring vicinity, *ibid.*, Apr. 25, 1872.

¹⁵At that time, there were about fifty miles of willow hedge outlining the farms, and many of the trees were from twenty to thirty feet high. White willow, box elder, white maple, white ash, cottonwood, basswood, black walnut, honey locust, chestnut, European and American larch, white and Scotch pines, osage orange, arbor vitæ, Norway and native spruces, were among the trees and shrubs then growing. The *catalpa speciosa*, Mr. Fell's favorite protégé, was a feature of the village planting. See Dr. John A. Warder, *American Journal of Forestry* for Oct., 1882. (Also reprinted as a circular.)

Captain Henry Augustine, long a prominent nurseryman of Normal,

sively in American lands, purchased the Larchwood farms, and came to America with his brother and a party of friends in April, 1882, to see the estate that he had acquired.¹⁶ He had previously brought out a pamphlet concerning Larchwood, and after inspecting the farms took up the work of further development with enthusiasm. He sent George E. Brown, an experienced forester from Scotland, to take charge of the groves, and sent saplings for planting. Delighted to find a successor so in sympathy with his ideas, Fell long kept up friendly relations with Mr. Sykes and various Larchwood residents.¹⁷

has told of his first meeting with Mr. Fell and of his championing of the *Speciosa*. A shy, awkward German boy, seeking his fortune in the new country, Mr. Fell called him in from the road one day, and had a long talk with him in his office. Finding that he loved trees, Mr. Fell explained to him the difference between the worthless and harmful varieties of the catalpa, and the useful *Speciosa*. He showed him the slight difference in the seed which is the only distinguishing mark in appearance. Mr. Augustine in later years himself became an extensive grower and dealer in the *Speciosa*. Henry Augustine, interviews. Fell in the *Pantagraph*, Dec. 30, 1882.

¹⁷As late as 1886, Fell was still corresponding concerning titles to Larchwood property. Sykes to Fell, Aug. 4, 1886.

CHAPTER XII

THE LAST YEARS

His unsuccessful efforts for David Davis were, as has been said, Fell's last important active participation in politics. After that, altho still interested in the issues of the day, he did no campaigning, save for some local projects in which he was interested. He continued to correspond with men who were in the field, and occasionally, upon request, expressed his opinions in the press.¹ Logan, engaged in 1874 with the formulation and passage of the Resumption Act, wrote to him upon finance; Wentworth and Murray discussed the election of 1876 with him.² As the faithful friend of Judge Davis, he seems to have arranged for his election to the Senate in 1877. He induced Palmer, the incumbent at that time, to withdraw from the race, and to throw the weight of his influence to the side of Davis. Logan was defeated, and Cullom became governor of Illinois.³ Any injustice still called forth a spirited defense of the person wronged, as in the case of S. W. Moulton, who was accused by political enemies of having had secession sympathies; and in the campaign against severe corporal punishment at the Soldiers' Orphans' Home, waged in 1877.⁴ With his brother Kersey, he induced William

A. Allin and David Davis to give Franklin Park to the city of Bloomington.⁵

Business was not by any means given up. Altho he had always made money easily, he had lost as well, and had given much away. He was no hoarder; money in itself was nothing to him.⁶ Withdrawing from the larger enterprises of his prime, in his old age Mr. Fell bent his energies toward securing property which might be depended upon to yield an income to his family after his death. Some land he owned in the outskirts of Normal was planted to strawberries and larger fruit, and from this he derived an incalculable amount of pleasure and a satisfactory return in money. Fell Park was sold to a syndicate, which after his death divided it up into city lots. Its great beauty became but a memory to the people of Normal, altho some of the fine trees still shade that part of the town.⁷

He kept in close touch with friends, among whom Jonathan Turner, Richard Edwards, Lawrence Weldon, John H. Bryant, and Charles G. Ames were perhaps nearest to him.⁸ His grandchildren, who lived very close to his home, were a source of great pleasure to him, and he took the keenest interest in their education. When not in school, these children were usually at their grandfather's, "keeping store" in the playhouse he had built years before for his own children, or listening to him as he sang to them or told them stories, working as he did so among his trees and shrubs. They took long drives with him into the country, and planned with him wonderful things to do in the future; for when he was an old man, Jesse Fell retained that fresh and buoyant forward-looking which had made him strong to accomplish in his youth, and passed it on to those who had their lives still before them. And with these family ties he kept up, later than any secular activity, his church work and church attendance. A new movement to which he gave some

⁵Franklin Price in *Pantagraph*, May 10, 1900, and *Normal Advocate*, Apr. 21, 1894.

⁶He told Eberhart once that he liked to make it, and enjoyed spending it for the benefit of other people, many of whom didn't know how to take care of themselves. The remark shows his somewhat paternal attitude toward society, and explains many of his projects.

time and attention and his unqualified assent, was that of woman suffrage, then in the days of its greatest struggle for a hearing. When Susan B. Anthony debated with President Hewitt of the normal school, it was he who introduced the pioneer suffrage advocate, and in his home she was entertained.⁹

Some time was spent in travel. In 1872 he made his first trip to the Pacific coast.¹⁰ In 1873 he paid a visit to his old home in Pennsylvania, and treasured until his death the memory of drinking water again at the spring in the milk-house, sitting by the fire-side, and having tea with the hospitable people who had bought his father's old farm. He spent the night with R. Henry Carter, as he had the last night before starting for the West in 1828. In later years he took, with various members of his family, trips through the farther West, which seemed to him a wonderful new world. He was planning a winter in California when overtaken by his last illness.¹¹

In ripening years a keen sense of humor, which during his more strenuous days was either subordinated to more important things, or forgotten by others in the memory of accomplishment, found frequent expression. It crept into conversation, brightened letters, even led to gentle Quaker jokes. These he could take as well as give, as two newspaper notices, quoted by Mr. Lewis, prove.¹² The first appeared on January 28, 1874, and read—"J. W. Fell mourns the loss of an umbrella, left in the court room yesterday. He would be pleased if the finder would leave it at the *Pantagraph* office." The sequel came the next day: "J. W. Fell desires to return thanks for the generous supply of umbrellas left for him at the *Pantagraph* office yesterday in answer to his advertisement of one lost. Altho most of these offerings are better adapted to dry weather than wet, Mr. Fell is not disposed to look a gift horse in the mouth, but accepts the varied assortment with the feeling that it is pleasant to be remembered in the hour of one's distress."

¹¹Newspaper clipping in the *Scrap Book*, Sept. 8, 1884. *Bloomington Leader*, Feb. 18, 1887.

¹²Lewis, *Life*, 104.

It was a few years later that a young girl invited him to a dance. The reply was as follows:¹³

Miss Florence Richardson:

The fair invites! and so, you bet,
Your invitation I'll accept.
But I must tell you in advance
My Quaker foot it will not dance.
A thousand times I have lamented
That Fox and Penn were so demented
As to proscribe what all can see
With half an eye, is poetry;
If not in words, in what is better,—
In *motion, life, spirit, letter*.
Yes, if I could, I'd skip and prance
In all the ecstasy of dance;
For I am young, and supple too,
I'm not quite three-score ten and two.
But what's the use? My education's
So neglected I'd scare the nation!
So goodbye dance, it's not for me,
As you and all can plainly see.

But, what of that? I shall propose
To play a game of dominoes;
And if perchance you're so inclined
Will play a game of mind with mind,
Holding to each other's view
The things of life, both old and new;
The ups and downs, the weals and woes
That follow man, where'er he goes.

Meet at the hotel? Very well,
There you'll find Yours,

J. W. Fell.

These instances will suffice to show the quality of the humor in which he met the days of declining strength. His last years were happy as they were busy. "I was glad to know," wrote John H. Bryant to him in 1885, "that you had got beyond all fears of the future, that terrible burden that weighs down with gloom, misery, and wretched forebodings so many of our race, and especially innocent children who are reared under orthodox instruction."¹⁴

In the winter of 1885-86 he suffered a severe illness, beginning with an attack of pneumonia in December, from which his

¹³Jan. 24, 1880. Newspaper clipping in *Scrap Book*, and manuscript.
Normal, Jan., 1880.

¹⁴Bryant to Fell, Feb. 25, 1885.

convalescence was very slow. At times his family despaired of his recovery. He did rally, however, and grew stronger during the summer, so that people hoped he might be spared for several years. But when cold weather came again, there was a relapse. He became really ill in January, but refused to stay closely at home. In February he spent two days in Chicago, attending to business for the Normal School which urgently demanded attention. He returned to his home in a very serious condition, made worse perhaps by worry over school affairs, then at a most critical juncture. The family physician, in consultation with others, pronounced it a case of anæmia of the brain. For a week he lay in a comatose sleep. Rousing himself finally, he spoke to members of the family, repeated Pope's "Universal Prayer", a favorite poem, and the "Now I Lay me" which he had said since boyhood. His death occurred on February 25, 1887.¹⁵

The usual marks of respect and regret at the death of a prominent and beloved citizen were paid him. Telegrams, letters, and flowers were sent from far and near. Newspapers printed eulogies and reviewed his life and work. Town councils, the Bloomington Bar Association, churches, schools, passed resolutions of respect.¹⁶ The funeral, on the twenty-eighth of February, was held in the large assembly hall of the Normal School; no church could have held the crowds that attended. The public schools were closed. Business in Normal was suspended.¹⁷ Special cars were run from Bloomington to Normal, to accommodate the people who wished to pay the last honors to Jesse Fell. The aisles, corridors, and stairs, and the steps of the building were filled with silent mourners who could not find room in the hall. Rev. Richard Edwards, his old friend and neighbor, preached the funeral sermon. Mr. Fell had selected him for this duty, pledging him to the briefest possible account of his accomplishment, a pledge which Dr. Edwards kept at the cost of some criticism from those who did not understand the circumstances.

¹⁵*Chicago Tribune*, Feb. 26, 1887. *Pantagraph*, Mar. 7, 15, 19, 1887. Richard Edwards to Fell, Feb. 4, 1887.

¹⁶A lodge of Knights of Pythias, shortly after organized in Bloomington, was named for him, altho he himself was never a member of any such organization.

¹⁷*Bloomington Leader*, Feb. 26, 1887. *California (Missouri) Democrat*, Mar. 3, 1887, quoting from *St. Louis Republican* of Feb. 26, 1887.

The service over, the procession formed for the long drive to the cemetery at Bloomington. No tribute could have been more eloquent than the appearance of the funeral procession. The country roads were as bad as Illinois country roads can be in spring, but carriages, carts and heavy farm wagons had come in from all the surrounding country. Shabby and smart vehicles alternated in the line that followed the hearse; and the procession was so long that when the last mourners were leaving the Normal School, the first ones had reached the court house in Bloomington. The Bloomington school children joined those of Normal at this point.¹⁸

There was sincere mourning, for in death men pay eager tribute to qualities which are accepted without appreciation, or quite ignored, in life. Mr. Fell had not been unappreciated in life. He had won from men the only thing he asked of them, a trust and goodwill answering to that he bore them. It is doubtful if those among whom he lived had any adequate idea of the part he had played in public affairs for many years, and few of them understood the magnitude of the work of development which he, and others like him, accomplished for the Middle West. But those personal qualities which distinguished him among men, all men saw and honored. "It is a good thing," said Judge James Ewing of him, in voicing this appreciation, "to have known one man whose life was without spot or blemish; against whose honor no man ever spoke; who had no skeleton in his closet; whose life was open as the day and whose death comes to a whole community as a personal sorrow." And John W. Cook, who knew him well, said of him at the memorial service held in his own church on the sixth of March:¹⁹

"In that picture gallery of the soul that we call memory, there will always be a gracious presence. The personality is vivid; the outlines are sharply defined; the face is full of earnest purpose; every line is suggestive of tireless energy and the radiance of hope. A simple, honest, unostentatious man; yet wherever he has gone good deeds have marked his footsteps. As if by magic, stately trees have sprung from the path over which

¹⁸The telephone was then just coming into use, and the one connecting the court house with the Normal School was used on this occasion by Henry Augustine, who had charge of arrangements, and who related the details given to the writer.

¹⁹James S. Ewing in the *Fell Memorial. Pantagraph*, Mar. 7, 1887; Mar. 27, 1890; June 20, 1892.

he has walked. In their gracious shade generations yet unborn shall mention his name with gratitude. Institutions whose only aim is helpfulness to man record his generosity and public spirit."

BIBLIOGRAPHY.

I. MANUSCRIPTS.

The Fell Manuscripts.—A collection of letters, memoranda, drafts, and other documents, in the possession of the Misses Alice and Fannie Fell, of Normal, Illinois. Unless otherwise indicated, all references to manuscripts are to parts of this collection. Transcripts in the Historical Survey, University of Illinois.

The Lewis Life of Jesse W. Fell.—A manuscript biography by Edward J. Lewis, a friend of Mr. Fell, written about 1900. It was prepared from facts gained by long personal acquaintance with Mr. Fell, from access to sources in the Fell Manuscripts, and from notes by Richard Edwards. In the possession of the Misses Fell. Referred to as the Lewis Life.

Notes by Richard Edwards, in the possession of his daughter, Miss Ellen S. Edwards, of Bloomington, Illinois. These are contemporary notes of interviews with Mr. Fell regarding events extending down to about 1840.

The Fell Memorial.—A collection of sketches and appreciations of Mr. Fell by various personal friends. In the possession of the Misses Fell. The page references to the Memorial in this thesis refer to the abridged transcript in the Illinois Historical Survey, University of Illinois.

Flagg Manuscripts.—Transcripts in the Illinois Historical Survey, University of Illinois.

Photostatic reproductions of letters from Fell to Trumbull, from the Trumbull Papers in the Library of Congress, Washington. The reproductions are in the Illinois Historical Survey.

Transcripts from Records of the War Department and Copyright Office, Washington, in the possession of the author.

Brush, Elizabeth P. The Political Career of Owen Lovejoy. Manuscript thesis, University of Illinois, 1912.

II. PERIODICALS.

Files of the Bloomington Observer and McLean County Advocate, the Western Whig, the Intelligencer, the Pantagraph, in the McLean County Historical Society Collection, Court House, Bloomington.

The Illinois Teacher.

McClure's Magazine.

Clippings from newspapers. A collection of these in a book, in the possession of Miss Alice Fell, of Normal, is referred to as the Scrap Book.

III. DOCUMENTS.

United States Congress, Statutes at Large.

Illinois, Session Laws.

Illinois State Superintendent of Public Instruction, Reports.

Mine Taxation in the United States

LEWIS EMANUEL YOUNG

PREFACE

This study is presented as a report upon the experience of the important mining states in the taxation of mines and mineral lands. The investigation of the historical data and of the laws was begun in 1910 and an effort has been made to include all important material published prior to November 1916. While there have been many important contributions to the literature of particular phases of mine taxation and of appraisal of mining property for the purpose of taxation, this study is probably the first publication which attempts to bring together data regarding the experience of the states in taxing mines and to compile the state laws affecting mine taxation.

It is essentially an historical statement and an explanation and comparison of methods employed in assessing and taxing mining properties. While the material may not be of service to either the economist who is an authority in taxation or to the mining engineer experienced in mine valuation it is hoped that it may serve to bring to a number of economists something of value from the field of mining, and to some of the mining profession, something helpful from the field of taxation.

Most of the introductory material comprising Chapter I might have been omitted if the thesis had been presented to mining men alone. Many mining engineers have little knowledge of the principles of taxation and several engineers have suggested that a brief statement of these general principles should be included. Owing to the fact that the volume of the material presented has greatly exceeded the limits originally proposed, it has been thought advisable to omit such a statement of principles and the engineer who desires to acquaint himself with the principles of taxation is referred to the well-known works of Professors H. C. Adams, C. C. Plehn, and E. R. A. Seligman.

The statement in Chapter I regarding the mineral resources of the United States is entirely inadequate to show statistically their importance but it was thought advisable to note briefly the geographical distribution of the producing mines and thus indicate the fact that the problem of mine taxation is not a local one nor limited to a few states.

In the statement of the experience of the various states only those states have been noted in which the practice has been different from the other important mining states or which have made several changes in the constitutional or statutory enactments affecting the taxation of mines.

It is to be regretted that so few data of taxes paid have been available for use in connection with the study of the tax burden on mines. Mining men generally may not be satisfied with the interpretation of the census statistics employed in Chapter VII but these have been used simply to give a basis for comparisons among the states and among different types of mines. The lack of data should indicate the necessity for the official collection and publication of statistics showing the tax burden on the mining industry.

No attempt has been made by the author to formulate an original plan for taxing mines and mineral lands. There are certain fundamental questions upon which there should be an agreement before any far-reaching revision of tax laws should be undertaken. Among the most important of these questions are the following:

1. Should natural resources be taxed in a manner or by a method different from other property?
2. Should natural resources be taxed at a higher rate if taxed in the same manner as other property?
3. Should wasting assets, such as mines, be taxed differently from other property?
4. Should the appraisal of mines for taxation be centralized, that is, placed under the immediate supervision of state officers?
5. Should mines be appraised physically for the purpose of taxation?

In the summary there is a brief statement of the conclusions of the author.

The thanks of the author are due various friends among the mining profession for suggestions and for the criticism of material, and he acknowledges his indebtedness to the members of the State Tax Commissions in all the mining states for their courteous criticism of copy and data. In several instances they have undertaken to examine the entire manuscript.

The author desires to acknowledge the helpful criticism and suggestions of colleagues in the University of Illinois and particularly of Professor E. L. Bogart under whose supervision the work was done.

CHAPTER I

INTRODUCTION

The mineral industry of the United States had an output which was valued by the United States Geological Survey at two billion four hundred million dollars in 1913 and at two billion one hundred thousand dollars in 1914.¹ The average value per annum during the period 1909 to 1914 was approximately two billion one hundred million dollars. A large amount of capital is invested in the industry and in certain communities the mines comprise the principal form of wealth. In such districts and in those states in which mining is one of the leading industries the problem of the taxation of mines and of mineral lands has become of great importance.

During the last decade considerable attention has been directed to this subject by the taxing bodies of a number of states, and important legislation directly affecting the problem has been enacted in Pennsylvania, West Virginia, Ohio, Michigan, Wisconsin, Minnesota, Oklahoma, and in a number of the Rocky Mountain states.

It may be said that the agitation in regard to the taxation of mines has been due largely to:

1. The large dividends paid by a few mines.
2. The presumption that mines in general pay dividends at a much higher rate upon the capital invested than other industrial enterprises.
3. The ownership of mines by stock-holders residing outside the state or the district in which the mines are located.
4. The difficulty experienced by county and township officials in appraising mines and mineral lands.
5. The wide-spread popular notions regarding the public interests or the public rights in mineral resources.
6. The suggested methods of conserving mineral resources or regulating their use by means of taxation.
7. The general and increasing tendency to shift the tax burden to industries.

¹*Mineral Resources of the United States, 1914*, p. 29.

8. Tax reform movements in general.
9. Increased public expenditures.

It is the purpose of this study to assemble some of the available data regarding the history and the present methods of mine taxation, including the laws of the states, the regulations of tax officials, the rules and methods used in appraising mines for the purpose of taxation, and the statistics of taxes paid by different types of mines operating under the various state laws.

NATURE OF MINING PROPERTY

Definitions. The definitions of mining property have been developed largely through the acts, opinions, and decisions of Congress, of the various state legislatures, of the state and Federal courts, and of the various taxing officers and commissions. There is now but little difference of opinion in regard to the definition of such terms as mineral, mine, and mining right, and in the classification of the various kinds of mining property.

In the mining industry, "mineral" is now defined broadly to include "every description of stone and rock deposits, whether metallic substances or entirely non-metallic".² This definition would probably be accepted by most of the American and English courts. New York courts have recently held that "mineral" includes all inorganic substances.³ "Geologic bodies which consist mainly of a single useful mineral—for instance, beds of pure gypsum or coal—or which contain, throughout or in places, valuable mineral that can be profitably extracted—for instance, veins containing disseminated gold—are called 'mineral deposits'."⁴

The term "mineral land" has received considerable attention from the courts on account of the variety and the distribution of minerals found upon the public domain. Federal and state courts have finally agreed that the term has an economic rather than a strictly geologic or mineralogic meaning as used in the Federal statutes regulating the entry and the sale of the lands of the public domain. One of the most concise and illuminating definitions of "mineral land" has been developed by Curtis H. Lindley as follows:

²Northern Pacific Co. v. Soderberg, 99 Fed. 506, (1900).

³White v. Miller, 200 N. Y. 29, (1910).

⁴Lindgren, W., *Mineral Deposits*, p. 2. New York, 1913.

"The mineral character of the land is established when it is shown to have upon or within it such a substance as—(a) Is recognized as mineral, according to its chemical composition by the standard authorities on the subject; or—(b) Is classified as a mineral product in trade or commerce; or—(c) Such a substance (other than the mere surface which may be used for agricultural purposes) as possesses economic value for use in trade, manufacture, the sciences, or in the mechanical or ornamental arts;—And it is demonstrated that such substance exists thereon or therein in such quantities as render the land more valuable for the purpose of removing and marketing the substance than for any other purpose, and the removing and marketing of which will yield a profit; or it is established that such substance exists in the lands in such quantities as would justify a prudent man in expending labor and capital in the effort to obtain it."⁵

This definition contemplates the classification of land as either "mineral" or "agricultural" by the Federal Government depending upon its value for either mining or agriculture. It introduces the idea of both quality and quantity of minerals and the possibility of the profitable working of the minerals. This same idea is incorporated in a recent decision of the United States Supreme Court in which it is held that the term "mineral lands" includes "all such as are chiefly valuable for their deposits of a mineral character which are useful in the arts or valuable for the purpose of manufacture."⁶ The Joint Committee on Tax Revision in Virginia in 1914 advised that mineral lands be defined by law to be "lands containing a workable seam or vein of mineral of commercial value".⁷

Various of the state courts have adopted definitions as broad as those noted. For the purpose of taxation the state of Utah⁸ has included gypsum under the term "other valuable mineral deposits"; but in a recent appraisal of mining properties in Michigan it was agreed by the appraisers that deposits of salt, gypsum, limestone, brick-clay, and marl should not be appraised on a mining basis as "none of these materials is inherently valuable in the ground, its value depending entirely

upon the labor that is put upon it, or on its commercial situation".⁹

Formerly the term "mine" was used in a narrower sense than now. The idea of subterranean excavation distinguished a mine from a quarry. But with the extensive development of open workings the term came to include underground mines, open-pit mines, and quarries. Bouvier defines a mine as a "pit or excavation made for the purpose of obtaining mineral".¹⁰ In the broad sense this definition includes wells bored to secure minerals, quarries, and those excavations which are commonly called mines.

Sovereignty and mineral rights. Before the Revolution, in practically all grants of land there was reserved for the Crown a one-fifth interest in all gold and silver mines, following the theory that these minerals belonged to the Crown. The charter of North Carolina in 1584, which was granted to Sir Walter Raleigh, reserved "the fifth part of all the ore of gold and silver that might be gotten and obtained".¹¹ The grant by King James of a charter to Virginia included the right to explore for minerals from the 34th to the 45th parallel but reserved one-fifteenth of the copper as well as one-fifth of all gold and silver.¹² The later charters of Virginia¹³ and the charters of Massachusetts¹⁴, New Hampshire¹⁵, Maryland¹⁶, Maine¹⁷, Rhode Island¹⁸, Connecticut¹⁹, and Pennsylvania²⁰ made a reservation of an interest, usually one-fifth, in the gold and silver.

The United States courts held²¹ that the entire title to the minerals, including the royal title to gold and silver which had been reserved by the Crown in Maryland, passed to the State,

“the interest of the proprietor by confiscation, and that of the king by conquest”.

Within the area included in the original thirteen states the Federal Government has held no public lands or title to minerals, but by the several cessions of the states a large tract west of the Alleghanies, containing valuable mineral deposits came under Federal control. Influenced by the idea that gold and silver should belong to the Crown, which idea had prevailed almost universally up to this time, the Continental Congress²² on May 20, 1785, in enacting laws regarding the public lands, reserved “one-third part of all gold, silver, lead, and copper mines to be sold or otherwise disposed of” as Congress should thereafter direct. This act continued in force until 1789.

In his plan for the disposition of the public lands presented to the first Congress in July 1791, Alexander Hamilton was silent on the subject of mineral lands.²³ On May 18, 1796, Congress in providing for the sale of the lands of the United States in the territory northwest of the Ohio River, directed United States surveyors to note the true location of all mines, salt licks, and salt springs. Certain salt lands in Ohio were reserved by Congress for the “future disposal of the United States”.²⁴ In 1803 Congress placed at the disposal of the President the sum of three thousand dollars for the purpose of developing the salt springs on the Wabash.²⁵

The leasing of lead lands and salt springs on the public domain was authorized by Congress on March 3, 1807.²⁶ These leases were not to run for more than three years.²⁷ The first leases under this law were issued in 1822 and the first lead in quantity was produced in 1826. The royalties and rents were difficult to collect and the entire system proved so unpopular that in 1834 the operators of the mines and smelters refused to make further payments.²⁸ The cession by the Chippewas of the Lake

Superior District on March 12, 1843, added that important mineral district to the public domain and a large number of leases were granted in that district in 1845, but the issue of these leases was discontinued in 1846. The United States courts had held that Congress has power to lease as well as to sell public lands.²⁹

Congress had previously, March 3, 1829, authorized the sale of lead mines reserved in the state of Missouri.³⁰ Other minerals of the public domain were still reserved from sale. On July 1, 1846, the lead mines and lands of Illinois, Arkansas, and the territories of Wisconsin and Iowa were opened to sale following the plan of the Missouri act.³¹ Finally, on March 1, 1847, Congress authorized the sale of lands containing "copper, lead, and other valuable ores after geographical examination and survey."³² The Chippewa lead lands were offered for sale March 3, 1847,³³ and the mineral lands of the Lake Superior District in 1850.³⁴

The pre-emption law of September 4, 1841, had excluded "all lands on which are situated any known salines or mines."³⁵

Up to this time no important deposits of gold or silver had been discovered upon the public domain and the Federal laws made no reference to these metals except incidentally and under the inclusive term of "mineral."³⁶ It was not until July 13, 1866, that Congress provided for the sale of gold and silver mines and lands.³⁷ Later, legislation was enacted providing for the sale of all types of mineral deposits upon the public domain. When the patent papers are issued the complete title to the surface and to the mineral rights is transferred to the citizen.

By the enactment of these laws the system of private ownership of mineral deposits has been developed in the United States. The Federal Government has completely surrendered its title to the minerals, and the mineral lands have passed to private ownership without any actual or implied reservation of

³⁷14 *Statutes at Large* 137.

a public interest greater than or different from the public interest in the mineral soils.

Chief Justice Field³⁸ said that in no instance has the United States "asserted any right to the mines as being reserved from the operation of the patents. The patent has uniformly been regarded as transferring all interests which the United States could possess in the soil and everything imbedded in or connected therewith. Whenever mines have been claimed, it has been as a part of the lands in which they were contained and when minerals have been reserved from sale or other disposition, it has only been by reserving the lands themselves. It has never been the policy of the United States to possess interests in lands in connection with individuals."

R. W. Raymond, an eminent American authority on mining law said, "The right of the land owner is supreme; and even when the Federal Government has legislated concerning mining titles it has done so for public lands only, and in its capacity as their owner, with the power, given to the land owner by the English common law, of separating the estate in minerals from the estate in soil and disposing of either upon any terms which it might dictate."³⁹

There has evidently been nothing in the history of the development of the mining customs or of the mining laws of the United States to warrant any assumption that the mining industry should be taxed upon a different basis from other industries operating upon property secured without reservation by complying with Acts of Congress.

Congress has enacted laws regulating the location of claims upon the mineral deposits of the public domain, but these laws are not effective in all the states. The public domain has never included any lands in the original thirteen states nor in Vermont, Kentucky, Maine, West Virginia, and Texas. The public land in Tennessee was granted to the state by the United States. The public lands in Ohio, Indiana, Illinois, and Iowa were largely disposed of before the enactment of the general mining laws. The lead lands of Illinois, Iowa, Arkansas, Missouri, and Wisconsin and the lands of Michigan, Minnesota, and Wisconsin valuable for copper and iron were sold under special laws. All the public lands in Oklahoma were declared to be agricultural; however, the federal mining laws have been extended by Congress

³⁸Moore v. Smaw, 17 Cal. 199, (1861).

³⁹*Mineral Resources of the United States*, p. 1004, 1883-1884.

to certain lands acquired from the Indian tribes. The general mining laws enacted by Congress are effective on the public domain in Alaska, Arizona, Arkansas, California, Colorado, Florida, Idaho, Louisiana, Mississippi, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, Wyoming, and parts of Oklahoma.⁴⁰

When the Union was formed there were extensive tracts of public lands within the states and it devolved upon the states to provide equitable laws under which citizens might acquire title to these lands. The mineral deposits commanded special legislation in only a few states, it being held generally that complete title to the minerals should pass from the state to the individual when the title to the surface passed. In 1843 an act of the Pennsylvania legislature established the principle that the entire estate of the Commonwealth passed with the patent granted by the State. The Georgia courts held in 1844 that, unless specific reservation is made, title to minerals passes with the land.⁴¹

The notable exception to this practice of the states has been New York. In 1786 the New York legislature directed the reservation of minerals on state lands. Gold and silver were held to belong to the sovereign, which in this instance was the state. This right of sovereignty was reasserted by the state legislature in 1828.⁴² At present the New York statutes include⁴³ the statement that all mines of gold or silver discovered anywhere in the state become the property of the state; the state also claims mines discovered on lands owned by persons not citizens of the United States; all mines discovered upon lands belonging to the state; and all mines discovered upon the lands of a citizen of the United States provided that the ore on an average shall contain less than two equal third parts in value of copper, tin, iron, and lead or any of these metals. Upon the discovery of minerals on the lands of the state, citizens of the state, after complying with certain regulations, may work the mines if they pay a royalty to the state of two percent of the market value of the product. The discoverer is exempted from paying royalty for twenty-one years and thereafter is required to pay a royalty of only one percent.

The state of Texas owned extensive tracts of land and

⁴⁰Lindley, *American Law of Mines*, I, 38.

⁴¹State of Georgia v. Canatee, 3 Kent 378.

⁴²3 Kent 378.

⁴³*New York Laws*, 1909, Vol. IV, Chap. 50.

originally (1837) reserved the minerals, but in 1866 the State provided for the sale of mineral lands without reservation.

Michigan has enacted laws regarding precious metal mines, specifying that mines containing gold and silver in any proportion are the property of the people of the State in their right of sovereignty.⁴⁴ However, provision has been made that this shall never apply to mines in lands owned by citizens of the State.

In the early days of mining in California, the State held that it possessed the regalian right to the precious metals in the public lands of the United States. The early ruling of the courts was reversed in 1861⁴⁵ and California has abandoned its claim to rights in the precious metals. California has never asserted any regalian rights in the precious metals in private lands. "Although apparently not expressly passed upon in other states, it is not probable that, if the question ever arises, any regalian right to the precious metals would be recognized in any of them."⁴⁶

Property in mines and mineral lands. Mining operations may be conducted under various types of ownership of the minerals or of rights to work them:

(1) The title to the surface and to the minerals beneath the surface and within the property lines may rest in one person.

(2) The title to the surface may carry with it the right, called the "extralateral right",⁴⁷ to follow the vein of ore on its dip outside certain property lines.

(3) The title to the minerals may be entirely separate from the surface right.⁴⁸

(4) The right to mine may be secured as a grant or lease upon the payment of a rental or of a royalty.

(5) The mining right may be simply a license or a grant for a short period of time, revocable at the pleasure of the owner of the mining right.⁴⁹

In certain states in which the title to the minerals has been acquired from the Federal Government by the location of mining claims upon the public domain and in accordance with the Acts

of Congress of 1866 and of 1872, the title to the surface of such a mining claim upon a lode or vein carries with it the right to follow the vein on its dip and between vertical planes through the parallel end lines of the claim. The privilege of following the vein on its dip, called the "extralateral right", gives to the locator upon a vein the right to mine ore outside his side (property) lines but similarly it takes from him the right to any minerals within his property lines occurring in veins which do not outcrop within his own surface boundaries. In other words, the discoverer of a vein who locates and holds a lode claim upon the public domain in accordance with the federal laws and the state statutes, acquires the unlimited and the perpetual mining right upon that particular vein between vertical planes through the parallel end lines of his claim.

When such a claim is patented according to the federal laws, a deed is issued and the claim becomes taxable by the state as other real estate. Prior to patenting, the vein itself remains the property of the United States and is not subject to taxation. The possessory right (of the locator) to the claim or location can be transferred or sold, is held to be property, and is subject to taxation by the state and the local authorities.⁵⁰ In some states this possessory right is classed as personal property⁵¹ and in others, as real estate.⁵²

The title to the minerals may be entirely separate from the soil and the title to the minerals may be divided so that the right to mine coal or only one seam of coal may be in one estate, another seam of coal may belong to a second, the right to drill for oil and gas may belong to a third, and the right to all other minerals may be reserved for a fourth.⁵³ The right to oil and gas is recognized in the same way as is the right to solid minerals in place.⁵⁴ Such a separation of interests may be made by sale or by reservation, and a deed for the mining rights is executed the same as for the surface rights.

The mining right as a lease or grant for a definite period is recognized by the courts as a property right and is taxable.

⁵⁰State v. Moore, 12 Cal. 56, (1859); Hale and Norcross G. & S. M. Co. v. Storey Co., 1 Nev. 105, (1865); Forbes v. Gracey, 94 U. S. 762, (1876).

⁵¹Waller v. Hughes, 11 Pac. 122, (1886).

⁵²1 Mont. 245, (1870).

⁵³Northern Pacific v. Mjelde, 137 Pac. 386, (1913).

⁵⁴Kelly v. Oil Co., 57 Ohio St. 317, (1897).

Mining operations are frequently carried on under lease when the mineral rights are severed from the surface. Under such conditions the following interests exist within and upon the same tract of land: (a) The surface right, (b) the mineral right, (c) the leasehold.

License to mine for a short period is usually not recognized as a separate interest for purposes of taxation.

The following kinds of property owned by mining operators are recognized and distinguished by the statutes of various states: (1) Surface rights when valuable for other than mining purposes; (2) surface improvements used for other than mining purposes; (3) surface improvements used only in conducting the operations of one mine or a group of mines owned by the same interests; (4) surface improvements used in conducting a custom business, such as a smelter or mill which receives ore in addition to that produced by the mines owned by the company operating the smelter or mill; (5) unpatented mineral land; (6) undeveloped mineral lands; (7) mining rights separate from the surface; (8) non-producing mines; (9) unprofitable mines; (10) profitable mines; (11) mined mineral product; and (12) mining leases.

The nature of the earnings of mines. The value of mining property is determined either immediately or remotely by the earnings it will return upon the capital invested. Mining operations exhaust mineral deposits and the returns from the sale of the product must be sufficient to pay all operating expenses, a dividend upon the capital invested sufficient to justify the mining risk entailed, and to amortize the entire capital invested within the period of the assumed life of the mine. Previously it has been unusual for American metal mining companies to create a sinking-fund to replace the capital invested but this is now being done by some interests. They have instead paid larger dividends and have left it to the stock-holders to set aside annually in their personal accounts some suitable item for redeeming the capital invested. The American mining dividend therefore must generally be considered on an entirely different basis from the dividend upon other industrial investments because it represents both a dividend and an annuity to reimburse the stock-holder for the sum he has invested for his stock. If the mining company is actually providing a sinking-fund in anticipation of the depletion of the mineral deposit, this fact must be recognized. In other words, the management of

such a mine would be maintaining its assets (the ore reserves plus the sinking-fund) at not less than a certain amount. If no sinking-fund is thus maintained the assets of the company will be constantly decreasing with the depletion of the mineral deposit and ultimately not only the earning power of the mine will be lost but the entire value of the mine will be represented by second-hand equipment on the property which is frequently so remote from a market that it will be of no value whatever.

In appraising mines for the purpose of taxation and in estimating the returns from mines and incomes from mining investments it will be necessary to keep clearly in mind the real nature of the earnings of mines.⁵⁵

MINERAL RESOURCES OF THE UNITED STATES

Geographical distribution of the mineral deposits. Valuable mineral deposits are scattered widely throughout the United States. The statistics of the United States Geological Survey show that of all the states only Rhode Island and Delaware produced less than one million dollars worth of minerals in 1912. Of the total value of the output of the United States the New England states produced 1.4 percent; the Middle Atlantic states 30 percent; the Southern states 12.4 percent; the Central states 29.7 percent; the Mountain states 16.6 percent; and the Pacific states 6.1 percent. Twenty-eight states are important producers of coal, twenty-four produce some iron-ore, twenty have produced and eleven are now important producers of petroleum, nine produce copper, sixteen produce gold, twenty-six quarry granite, fifteen mine lead and zinc, thirty quarry limestone on a large scale, twelve mine gypsum, and thirty-one quarry sandstone.

While a number of the states have not developed important

⁵⁵Marshall says: "A royalty is not a rent, though often so called. For, except when mines, quarries, etc., are practically inexhaustible, the excess of their income over their direct outgoings has to be regarded, in part at least, as the price got by the sale of stored-up goods—stored up by nature indeed, but now treated as private property; and therefore the marginal supply price of minerals includes a royalty in addition to the marginal expenses of working the mine. The royalty itself on a ton of coal, when accurately adjusted, represents that diminution in the value of the mine, regarded as a source of wealth in the future, which is caused by taking a ton out of nature's storehouse." Marshall, A., *Principles of Economics*, 6th Ed. Book V, Chap. X, Sec. 6. See also *Ibid.* Book IV, Chap. III, Sec. 7; Taussig, F. W., *Principles of Economics*, II, 92.

metalliferous deposits or extensive and valuable deposits of mineral fuels, yet most of the states possess mineral deposits of economic importance which are contributing toward the welfare of the commonwealth and of the nation.

Importance of the mineral resources. The value of the mineral resources in various states and in the nation as a whole has undoubtedly been realized to a large degree by citizens, by officials, and by economists at home and abroad. Leroy-Beaulieu in discussing the mineral industry of the United States⁵⁶ says: "Clearly no country has been so richly dowered by nature with mineral resources of all sorts and, however high may be our estimate of the qualities of its people, it is not unfair to say that the marvelous wealth of the subsoil of the United States contributes more than aught else to its economic strength."

The rapid development of these resources is indicated by the statistics of value of mineral products as reported by the United States Geological Survey, as follows:

Year	Total
1880	\$ 364,928,298
1890	606,476,380
1900	1,107,031,392
1905	1,623,664,785
1910	1,991,216,220
1911	1,926,284,008
1912	2,244,033,833
1913	2,439,159,728
1914	2,114,946,024

It seems important then that there should be adopted a policy both for the development and the use of mineral resources upon the public domain and within lands privately owned which will result in the most beneficial use of these resources under our existing form of government.

At the present time, according to the United States Geological Survey,⁵⁷ this country is contributing a large part toward the world's annual production of minerals. "The United States mines nearly 40 percent of the world's output of coal and produced 65 percent of the petroleum in 1913. Of the more

⁵⁶Leroy-Beaulieu, P. *The United States in the Twentieth Century*, p. 223, New York, 1907.

⁵⁷Smith, G. O. *Our Mineral Reserves*. Bul. 599, U. S. Geological Survey, Washington, 1914.

essential metals, 40 percent of the world's output of iron ore is raised from American mines, and the smelters of the United States furnish the world with 55 percent of its copper and at least 30 percent of its lead and zinc."

An estimate of mineral resources can not, of course, be more than an approximation which attempts to predict what quality of mineral deposits may eventually be of economic importance. For example, the coal resources of the United States, exclusive of Alaska, have been estimated at fifteen hundred billion short tons.⁵⁸ At the present rate of production and of domestic consumption the supply would last many years; at an increasing rate of consumption, the life of the deposits would be greatly shortened. It is outside the field of this investigation to enter into a discussion of the extent and value of these resources, or to propose policies for their development and use, but it seems appropriate to direct attention to the policy and the experience of the nation and of the political units in dealing with the mineral resources.

POLICY REGARDING THE MINERAL RESOURCES

Federal policy. During the period from 1785, at which time the Continental Congress first reserved rights in minerals, to 1866, when Congress provided for the sale of the lode lands of the West, there seemed to be considerable difference of opinion as to the policy that Congress should pursue in disposing of the mineral lands of the public domain. The almost complete failure and the unpopularity of the leasing system, as tried in the Mississippi Valley and in the Lake Superior region, caused President Polk in a message to Congress, December 2, 1845, to recommend that the mineral lands be placed upon the market and sold. Directly thereafter Congress opened to sale the mineral lands of the Middle West. However, the specific reservation of minerals by the pre-emption laws and in the grants to railroads and to states continued the problem on an even greater scale, particularly after gold was discovered in California in 1848. Various schemes of government ownership and of government leases were suggested, but, with the experience with the lead leases serving to warn against the leasing system and with the miner pointing to the generous policy of the government in disposing of agricultural lands, Congress finally, in 1866,

⁵⁸*Ibid.*, p. 11.

adopted the policy of selling the mineral lands. This policy has been extended to include all types of mineral deposits.

The revenue secured from the sale of these mineral lands has been comparatively small and the federal government has derived no additional revenue from them except through internal revenue taxes, licenses, and the corporation and income taxes; but the federal policy has encouraged the rapid development of the mineral resources of the Western states.

State policy relating to mines. The policies of the various states in dealing with mineral resources have varied widely. The policy may change with the economic development of the state and one of the following plans may be adopted:

A. The state may retain the title to the minerals and may either (1) carry on mining operations as a state enterprise or (2) may permit citizens to open mines and for this privilege the state may charge a royalty or a rental.

B. The state may sell the lands or the mining rights and then (3) tax the mines or mining rights, or (4) may exempt them from taxation, or (5) may grant bounties or premiums in order to encourage and hasten the development of the mineral resources.

The granting of an exemption from taxation or of a bonus or a reward may occur during the development period of mining or during the decline of a particular mine, in the latter case in order to prolong the period of operation.

Some of the states, notably Minnesota, have retained large areas of public land containing extensive mineral deposits and have leased these to mining operators, thus securing considerable state revenue. In some states large grants of land have been set aside for the public schools and for institutions of higher learning. Upon exploration some of these tracts have been found to contain valuable mineral deposits. The policy of leasing these lands has frequently been adopted. Such state and school lands are generally exempt from taxation. The effect of this reservation of large tracts of land, exempt from taxation, within important industrial districts is to increase the burden of local taxation upon the adjacent property.

Exemptions. The states that have exempted mines from taxation have planned to assist the entire mining industry during a stated period or to assist single mines during the development period.

(1) Every mine may be exempt during the years immediately following its opening. Maine has exempted mines from

taxation for ten years from the date of opening. Improvements and lands are taxed as is other property.⁵⁹ Vermont exempts mines and quarries together with improvements and machinery for a period of five years. This period may be extended by the vote of the municipality.⁶⁰

(2) All mines may be exempt during the period between specified dates. Colorado exempted all mines, except surface improvements, for ten years after the admission of the state to the Union.⁶¹ Louisiana permitted the exemption of mining companies from local taxes from 1900 to 1910.⁶² In 1885 Michigan suspended the specific tax on mines, as it applied to gold, silver, and lead mines, for a period of five years.⁶³ The Arkansas constitution of 1874 provided that the General Assembly might by general law, exempt from taxation the capital invested in any or all mines in the state for the term of seven years following the ratification of the constitution.⁶⁴

(3) All mines may be exempt from certain taxes during any year that the output is less than a certain amount. An Oregon statute provides that, if the output of a domestic mining company does not exceed one thousand dollars in the preceding year, the company may pay ten dollars in lieu of the annual license fee.⁶⁵ This same principle applies in a number of states which classify mines as producing and non-producing. Mines having an output in any year valued at less than a specified sum are exempt during that year.

(4) All mines may be exempt from taxation until a dividend is earned. New Hampshire taxes the surface improvements but exempts the mine itself until the first dividends are declared.⁶⁶

(5) Mines may be exempted at the discretion of the state legislature. The constitution of Idaho permits the legislature from time to time to make such exemptions as shall seem necessary and just.⁶⁷

Bounties. Industrial bounties have been granted by various states from time to time in order to encourage mining.⁶⁸ Bounties for the production of salt were granted by New York in 1822, by Michigan in 1859⁶⁹ and by Alabama in 1861. In 1827 Vermont offered a premium of five hundred dollars for the first five hundred bushels of salt manufactured in the state. Utah offered one thousand dollars in 1854 to any one who would open a good coal mine within forty miles of Salt Lake City.⁷⁰ In 1887 Nevada offered a series of rewards for the improvement of metallurgical methods in the reduction of ores containing the precious metals and in 1901 offered a reward of one thousand dollars to the first person who should produce five barrels of crude petroleum from a well within the state. Similar prizes were offered for the production of natural gas and artesian water.

REVIEW OF UNITED STATES MINING HISTORY

The development of systems of taxing mines logically followed the development of the mining industry. Prior to 1848, mining did not hold the important position as a national industry that it now holds. When the Federal Government was organized in 1780 there was but little mining within the national boundaries. Probably the most important mines were those for iron which had been opened along the Atlantic coast.⁷¹ The first seventy years of our national life were notably a period of acquisition of territory rich in minerals, and a period of exploration and of discovery. Among the noteworthy events and developments in the mining industry were the opening of the anthracite fields in Pennsylvania, the mining of bituminous coal in Pennsylvania, Maryland, and other eastern states; the use of anthracite and of bituminous coal in the blast-furnaces; the development of gold mining on a small scale in Georgia and several other southern states; the opening of copper and iron mines in Michigan; of zinc mines in New Jersey, of lead mines in Missouri, Illinois, Iowa, and Wisconsin; and the discovery of gold in California in 1848. With the great development of the precious metal deposits there came also extensive industrial development and the opening-up of deposits of the base metals

⁷¹Swank, J. M. *American Iron Trade in 1876*. Philadelphia, 1876.

and of fuels. Prior to 1848 little attention was paid to the taxation of mines.

The period from 1848 to 1859 was notably a placer mining period. The value of the output of gold and silver for the period is estimated at \$325,000,000. The discovery of the Comstock and other lodes in the Rocky Mountain region in 1859 opened the bonanza period of lode mining in United States mining history.

During the years from 1859 to 1898 there was substantial development and extensive scientific exploration of the mineral resources of the nation.⁷² The development was general throughout the states, but only the richest and the easily accessible deposits were opened. Taxation of mines received attention in the western states and territories, but in the Middle West and in the East relatively little attention was paid to this phase of taxation. With the increase in the population of the mining districts and with the development of extensive agricultural and industrial interests in the mining states and districts, tax payers in general have endeavored to place a relatively greater tax burden on the mines and mineral lands. This movement came largely during the period following 1890.

The discovery of iron ore on the Mesabi iron range in Minnesota in 1890 has been referred to as the last and greatest of the mineral discoveries. The period which then opened has been notable particularly on account of the large-scale development of low-grade mineral deposits, although some rich mines and districts have been opened during the period. Following the use of the steam-shovel in mining there began a search for mineral deposits, which, although of poor quality, were extensive and regular enough to warrant the construction of large plants for mining, handling, and treating the ores. The development of the Mesabi iron range, of the so-called "porphyry copper mines", and of the low-grade gold deposits of the West, has placed this type of metal mining upon a basis that suggests comparisons with manufacturing and similar enterprises. The value of the mineral output of the United States increased from \$606,476,380 in 1890 to \$2,445,805,017 in 1913.⁷³

The development of mining has played an important part in the industrial history of many of the states and of the nation

as a whole.⁷⁴ In several states considerable state revenue has been secured from the mines and a number of the activities of the states have been made possible on account of the revenue thus derived. Other states have derived comparatively little public revenue from mining in proportion to the earnings of the industry. In the succeeding chapters attention will be directed particularly to the problems of taxation in the states, federal taxation receiving attention only in Chapter II.

CHAPTER II

FEDERAL TAXATION OF MINES

The Federal Government derived no revenue from mines and mineral lands, except from leases and from the sale of lands, until the first Federal income tax was imposed August 6, 1861.¹

Revenue has been secured at various times through internal revenue taxes upon output, mining licenses, income taxes, and the corporation excise tax.

INTERNAL REVENUE TAXES

Taxes on mineral products. The products of mines have been subjected to internal revenue taxes, notably during the Civil War. On July 17, 1862, Congress levied upon the producer "on all mineral coals, except such as are known in the trade as pea coal and dust coal, three and a half cents per ton, provided, that for all contracts of lease of coal lands made before April 1, 1862, the lessee" should pay the tax.² The laws of March 3, 1863, amended the foregoing act and provided that the tax on all coal mined and delivered at the mines on contracts made prior to July 1, 1862, should be paid by the purchasers thereof.³ The rate was raised to five cents a ton on June 30, 1864.⁴ By the Act of March 3, 1865 the rates upon pea coal were specified⁵ and a duty of one dollar a barrel was levied on crude petroleum or rock-oil.⁶ A tax of one-half of one per cent was levied upon bullion produced.

Mining license. A Federal license was required by the Act approved March 3, 1865, of all persons, firms, or companies employing others in mining, providing the receipts of the mine exceeded annually one thousand dollars. The charge for this license was ten dollars.⁷ Under the Internal Revenue Act of June 30, 1864, as amended in 1866, a mining company assaying

⁶*Ibid.*, 38th Cong. 2d Sess., Chap. 78.

⁷*Ibid.* Chap. 78.

its own ores was required to pay a special tax as an assayer.

Corporation excise tax. By an Act of August 5, 1909, a special excise tax was levied upon the business of corporations.⁸ All corporations, joint stock companies, and associations organized for profit and having a capital stock represented by shares were subject to this tax, which was levied "with respect to the carrying on or doing business." The rate was fixed at one percent upon the entire net income, over and above five thousand dollars, received from all sources during each year exclusive of amounts received as dividends upon stock of other corporations subject to the corporation excise tax.

In addition to the deductions for operating expenses actually paid within the year out of income, necessary charges for maintenance, losses sustained, and for depreciation might be deducted.⁹ Various changes in the interpretation of the law were made during the period it was in force.¹⁰

Several mining companies claimed that mining was not a "business" in the sense used in the excise law and an attempt was made by some of the companies to recover the taxes paid. In *Stratton's Independence v. Howbert*,¹¹ the plaintiff claimed that, "The proceeds of mining operations result from a conversion of the capital represented by real estate into capital represented by cash, and are in no true sense income." The defendant claimed, "The mineral as it lies in the ground is capital, but when it is extracted and sold, the result is a flow, and income has accrued." The court, in discussing the nature of mining said, "The peculiar character of mining property is sufficiently obvious. Prior to development it may represent to the naked eye a mere tract of land with barren surface, and of no practical value except for what may be found beneath. Then follow excavation, discovery, development, extraction of ores, resulting eventually, if the process be thorough, in the complete exhaustion of the mineral contents so far as they are worth removing. Theoretically, the entire value of the mine, as ultimately developed, existed from the beginning. Practically, however, and from a commercial standpoint, the value—that is,

⁸36 *Statutes at Large* 112. 61st Congress, Sess. I. Chap. 6, Sec. 38.

¹¹231 U. S. 403, (1913).

the exchangeable or market value—depends upon different conditions. Beginning from little, when the existence, character and extent of the ore deposits were problematical, it may increase steadily or rapidly so long as discovery and development outrun depletion, and the wiping out of the value by the practical exhaustion of the mine may be deferred for a long term of years''. The court held: (1) Mining corporations are not different from other corporations in the application of the law. (2) The proceeds of ore sales resulting from mining operations conducted on a corporation's own premises are income just as is the case with any other income. (3) The value of the ore before being mined can not be regarded as subject to depreciation and treated as such.¹²

The corporation excise tax was superseded by the income tax of October 3, 1913.

INCOME TAXES

Civil War income tax. On August 6, 1861, Congress enacted a law providing for a Federal income tax.¹³ This act levied a tax of three percent on all income in excess of eight hundred dollars. It was repealed and then re-enacted July 1, 1862.¹⁴ The new law imposed the same rate, three percent, upon the excess of income above six hundred dollars up to ten thousand dollars, and five percent on the excess over six hundred dollars when the income exceeded ten thousand dollars. The rates and the amount of exemptions were changed a number of times until finally by Act of July 14, 1870,¹⁵ the tax was discontinued after 1871.

Act of 1894. Again in 1894 Congress enacted a law providing that incomes should be taxed from January 1, 1895, to January 1, 1900. While this act never became effective, it is interesting to note the rules which were to control in determining

¹²In the District Court of Colorado in 1912 it had been held (207 Fed. 419) that the words "net income" as used in the Act of August 5, 1909, do not contemplate an allowance, in favor of a corporation operating a mine, for ore in place extracted from the property; the net income being the value of what is extracted after deducting the cost of extraction and treatment and the cost of administering the corporation with a reasonable reservation for contingencies.

¹³12 Stat. at Large 309.

¹⁴*Ibid.*, p. 473.

¹⁵16 Stat. at Large, 257.

income from mines.¹⁶ Incomes from coal mines were to be reported and no deductions were to be made on account of the diminished value, actual or supposed, of the coal vein or bed by mining.¹⁷ The profit on the sale of mined coal was held to be the difference between the amount received and the expense of production, excluding all deductions for the personal service of the miner and family, plus the amount paid for each ton to the owner or lessor of the mine.¹⁸ Leases were held to be personal property.¹⁹ Rent from mines, or royalty, was held to be income and was to be included in the returns. A mining claim arising from the location of a mine on the public mineral lands was held to be personal property, and the difference between the actual cost and the price received from the claim was the profit.²⁰

Act of 1913. In order to insure the constitutionality of a Federal income tax, a constitutional amendment²¹ was adopted authorizing Congress to levy taxes on incomes. On October 3, 1913, Congress enacted an income-tax law,²² which superseded the special excise tax on corporations, enacted August 5, 1909. "Insofar as it relates to the tax levied against corporations, the income-tax law is not essentially different from the special excise tax law; except that it is a little broader in its scope and comprehends certain organizations which are not subject to the special excise tax."

"As applied to corporations the essential differences between the old law and the new are these:

1. The excise-tax law applied only to corporations, etc., no matter how created or organized.
2. The excise-tax law levied a tax equivalent to one percent on the entire net income over and above \$5,000; the income-tax law levies the tax of one percent upon the entire net income, without any specific exemption.
3. The excise-tax law required all income from whatever source to be returned; the income-tax law does not require

¹⁶Gould, J. M. and Tucker, G. F. *The Federal Income Tax Explained*. Boston, 1895.

²¹Amendment XVI., February 25, 1913.

²²38 *Statutes at Large* 114.

income from obligations of the United States or of any State or Territory or political subdivision thereof to be returned for taxation.

4. The excise-tax law authorized corporations to deduct from gross income dividends received on the stock of other corporations subject to the tax, while under the income-tax law such dividends are not exempt from the tax in the hands of the corporations receiving them.

5. Under the excise-tax law the interest deduction was limited to the amount of interest actually paid within the year on an amount of indebtedness not in excess of the paid-up capital stock outstanding at the close of the year, while under the income-tax credit may be taken for an amount of interest actually paid within the year on an amount of indebtedness not in excess of one-half of the sum of the interest-bearing indebtedness and the paid-up capital stock outstanding at the close of the year.

6. Under the excise-tax law every corporation subject to the tax was required to make its returns on the basis of the calendar year, while under the income-tax law corporations may, by properly designating for this purpose a fiscal year, make their returns on the basis of the fiscal year so established."²³

In computing net income for the purpose of the normal tax the deductions allowed are as follows: First, the necessary expenses actually paid in carrying on any business, not including personal, living, or family expenses; second, all interest paid within the year by a taxable person on indebtedness; third, all national, state, county, school, and municipal taxes paid within the year, not including those assessed against local benefits; fourth, losses actually sustained during the year, occurring in trade or arising from fires, storms, or shipwreck, and not compensated for by insurance or otherwise; fifth, debts due to the taxpayer actually ascertained to be worthless and charged off within the year; sixth, a reasonable allowance for the exhausting wear and tear of property arising out of its use or employment, not to exceed, in the case of mines, 5 percentum of the gross value at the mine of the output for the year for which the computation is made, but no deduction shall be made for any amount of expense of restoring property or making good the exhaustion thereof for which an allowance is or has been made;

Provided, That no deduction shall be allowed for any amount

²³*Annual Report, Commissioner of Internal Revenue, 1914, p. 14.*

paid out for new buildings, permanent improvements, or betterments, made to increase the value of any property or estate; seventh, the amount received as dividends upon the stock or from the net earnings of any corporation, joint stock company, association, or insurance company which is taxable upon its net income.

The normal tax is levied upon the entire net income of corporations. In the case of mining corporations "a reasonable allowance for depletion of ores and all other natural deposits not to exceed 5 percentum of the gross value at the mine of the output for the year for which the computation is made". The deductions permitted include a "reasonable allowance for depreciation by use, wear and tear of property, if any."²⁴

The term "gross value"²⁵ as used in describing a limit to the amount which may be deducted in the return of individuals and corporations as depreciation in the case of mines is held to mean "the bona fide market value of ore, coal, crude oil, and gas at the mine or well, where such value is established by actual sales at the mine or well; and in case the market value of the product of the mine or well is established at some other place than at the mine or well, or on the basis of the bullion or metallic value of the ore, then the gross value at the mine is held to be the value of the ore, coal, oil, or gas sold, or of the metal produced, less transportation, reduction, and smelting charges."

"Depreciation of coal, iron, oil, gas, and all other natural deposits must be based upon the actual cost of the properties containing such deposits. In no case shall the annual deduction on this account exceed 5 percent of the gross value at the mine (well, etc.) of the output for the year for which the computation is made."²⁶

"If the rate of 5 percent shall return to the corporation its capital investment prior to the exhaustion of the deposits, the rate on which the annual deduction for depletion is based must be lowered in accordance with the estimated number of years it will take to exhaust the estimated reserves. In case the reserves shall be in excess of the estimates no further deduction on account of depletion shall be made where the capital investment has been returned to the corporation."²⁷

²⁴*Regulations 33, U. S. Internal Revenue, January 5, 1914.*

²⁵*Ibid.*, Art. 6.

²⁶*Ibid.*, Art. 141.

²⁷*Ibid.*, Art. 142.

Corporations leasing oil and gas lands are required to estimate depreciation upon the cost of the lease and not upon the estimated value or production of the wells.²⁸

“Corporations operating mines (including oil or gas wells) upon a royalty basis only can not claim depreciation because of the exhaustion of the deposits.”²⁹ “Unearned increment will not be considered in fixing the value on which depreciation shall be based.”³⁰

The United States Supreme Court held that a tax levied on a mining corporation under the income-tax law of 1913 is not a direct tax on property but is a true excise levied on the business of carrying on mining operations. It was claimed that when adequate allowance is not made for the exhaustion of the ore body, the tax really falls upon the property.³¹

In interpreting the Federal corporation tax, the Court of Appeals held that when royalty is paid annually in “fixed amounts per ton of all ore taken” or as a stipulated minimum amount whether the ore was taken or not, the transaction is in effect the sale of the ore and the royalties are in fact the purchase price of the ore. The amounts paid under the name of royalties for the ore taken cannot be called or classed as income, but must be regarded as parts of the capital of the corporation, as the lessor from the ores to the royalties and claims to the purchase price of such ore, which the lessee covenanted to and did pay under the name of royalties, and such sums are not subject to the United States corporation tax act.³²

Act of 1916. The law of 1913 was amended in 1916 and among the changes made were several that have an important effect upon the mining industry. The rate is continued at two percent of the net income of corporations, joint stock companies, and associations. The deductions permitted include “a reasonable allowance for the exhaustion, wear and tear of property arising out of its use of employment in the business or trade; (a) in the case of oil and gas wells a reasonable allowance for actual reduction in flow and production to be ascertained not by the flush flow, but by the settled production or regular flow; (b) in the case of mines a reasonable allowance for depletion

thereof not to exceed the market value in the mine of the product thereof which has been mined and sold during the year for which the return and computation are made, such allowance to be made in the case of both (a) and (b) under rules and regulations to be prescribed by the Secretary of the Treasury: Provided, that when the allowance authorized in (a) and (b) shall equal the capital originally invested, or in case of purchase made prior to March 1, 1913, the fair market value as to that date, no further allowance shall be made.'³³

³³Act of 1916, sec. 12.

CHAPTER III

HISTORY OF MINE TAXATION IN THE STATES

The general property tax was firmly established in the American colonies¹ before mining was developed as an important industry. As has been noted previously, in a number of the states special concessions were granted in order to encourage the rapid development of the resources, the mines being considered essentially as contributors to industrial activity rather than as sources of public revenue.

There is practically no mention of the methods of assessing and taxing mines in the state histories of taxation for the period prior to 1840. As the mineral deposits were opened and as the earnings from mines increased the older states applied the existing tax laws to mines. In 1846, Michigan departed from the common practice of applying only the general property tax to mines by levying a specific tax as a percentage upon the gross

¹The property tax was the leading form of direct levy in all the proprietary provinces. (Osgood, *The American Colonies in the Seventeenth Century*, II, 349). Maryland levied on property first in 1654 and regularly after 1666. (*Maryland Archives Assembly 1666*, p. 235.) In South Carolina the property tax appeared first in 1682. In 1683 New York began regularly the system of a penny in the pound of the value of all property. (*Orders and Warrants*, M. S., 1674-1685, p. 108; Schwab, *History of the New York property tax, Publications of the American Economic Association*, V, 5). Ability as measured by the ownership of property came to be the basis of taxation in New England. In 1634, Massachusetts adopted the policy of levying taxes according to the estates held. (Douglas, *Financial History of Massachusetts*, p. 18). The property tax was developed later in Virginia and in a different form. (Ripley, *Financial History of Virginia, Columbia University Studies in Political Science*, 1893, IV, 18).

value of the products of the iron and copper mines. In 1853 the Michigan legislature first imposed a tonnage tax on coal, iron ore, and smelted copper or copper mineral. Pennsylvania, using the general property tax, began at an early date to recognize mineral rights, separate from the land, as a form of property subject to taxation. The courts definitely approved the practice in 1857.

Some of the mining states and territories of the West followed the experience of the Eastern states in framing their state tax laws. The general tax laws were applied to the mines in California, Washington, Oregon, North Dakota, and South Dakota. But in the other Western states attempts have been made to devise special systems of taxation for mines.

Prior to the enactment of the Federal mining laws, the miners established local mining districts with their own local laws and local government. Some public revenue was necessary. In the year 1861 the miners in a district of what is now Boulder County, Colorado, then Nebraska Territory, levied a tax at a uniform rate per mining claim. The same system was adopted by other Western mining districts. The records of the Gold Hill District in Colorado show that on October 2, 1861, a resolution was adopted in opposition to "any system of taxation of quartz or other mining claims having anything to do with the books or with the recording of claims."²

In 1862, three years after the Comstock Lode was discovered, Nevada inaugurated the system of taxing the proceeds of mines. The state retained four-tenths of the revenue derived and the remainder was distributed among the counties.³

Arizona, in 1864, gave the mining companies the option of paying a tax on general property or an annual tax on net proceeds and fifty cents per one hundred dollars valuation of real estate. However, in 1866 Arizona repealed the law of 1864 and taxed mining companies on invested capital and capital stock, but re-enacted the proceeds tax in 1871. In 1881 Arizona again returned to the general property tax for taxing mines.

Maryland attempted to collect a tonnage tax on coal in 1874, but the law was held unconstitutional as being in restraint of interstate commerce, for it required the payment of the tax by the transportation companies.⁴

²*Tenth Census*, 1880, XIV, p. 352.

³*Laws of Nevada*, 1862, p. 131.

⁴*State v. Cumberland & P. R. Co.*, 40 Maryland 22.

The Michigan tonnage tax was declared unconstitutional in 1875 as being in restraint of interstate commerce; it discriminated between ore smelted in the state and that shipped to smelters outside the state.⁵ The tonnage law entire was repealed in 1891.

Minnesota collected a tonnage tax from iron mines from 1881 to 1896, at which time the state law was declared unconstitutional.

After having exempted mines, Colorado in 1887 imposed a tax upon mines on a valuation based on the gross proceeds.

There seems to have been a tendency in the Rocky Mountain states to tax only profitable mines and to lay whatever burden was apportioned to the mining industry of a state or of a district upon the successful mines, entirely exempting the developing and the unprofitable mines. A number of the states have taxed the possessory right to unpatented claims upon Federal and state lands and have also levied a tax, under the general property tax laws, upon all improvements upon unpatented claims and unprofitable mines.

Mining corporations have usually been subject to the same fees, licenses, and corporation taxes as corporations chartered for other purposes.

In reviewing the tax history of a number of states that have used the general property tax there is little to note that has been distinctive of the experience of these states in dealing with the mining industry when compared with the taxation of other industries and the property used in these industries. In the following section, there is given a review of the experience of a number of the states that have had special problems to solve or that have employed methods other than the general property tax.

ARIZONA

Arizona contains important mineral deposits and mining is one of the leading industries of the state, the output of the mines being valued at \$67,497,838 in 1912, \$71,429,705 in 1913, and \$60,391,272 in 1914.⁶

It is reported that there was some primitive mining within the boundaries of Arizona as early as 1650, particularly in Pima County. Gold was discovered in the Santa Rita Mountains in 1769. During the period from 1855 to 1863 mining did not

⁵Jackson M. Co. v. State Auditor, 32 Michigan 488.

⁶*Mineral Resources of the United States, 1914*, p. 32*.

develop rapidly owing to trouble with the Indians and lack of transportation facilities.⁷ In 1864 mines were taxed⁸ as other property, but were permitted to pay instead of such taxes an annual tax of five percent upon the net proceeds and fifty cents per one hundred dollars of value of real estate owned. In 1866 the law of 1864 was repealed and mining companies were taxed on invested capital and capital stock. By an act of December 15, 1868, all mining companies were relieved from the payment of taxes in 1868 beyond those assessed on their real and personal estate within the territory. The law of 1871 specified mines or possessory rights as real estate.⁹

A tax on net proceeds of mines was enacted February 4, 1875.¹⁰ In determining the gross proceeds deductions for operating expenses were to be made but not to exceed 90 percent of the gross value of the ore when such gross value was between thirty and sixty dollars per ton. Not over eighty percent might be deducted from the gross value of ore worth sixty to one hundred dollars; not over sixty percent on ores of one hundred to two hundred dollars gross value; and not to exceed forty percent on ores worth more than two hundred dollars; an added deduction of twenty dollars per ton was allowed on all ores that were roasted before reduction, and all ores valued at less than thirty dollars were exempt from taxation.

By an Act of February 9, 1877, the levy was made two percent upon the net proceeds, twenty-five percent of the revenue went to the territory and the remainder to the county.¹¹

The law of 1875, taxing net proceeds, was repealed in 1881 and mining companies were taxed under the same laws that applied to other corporations.¹²

The revised statutes of 1901 specify that the term land as used in the section of the law of taxation "shall not be so construed as to include mining claims either lode or placer".¹³ During this period there was a general impression that mines were not paying their full share of taxation and in 1903 the Governor of Arizona stated that the mining industry was

allowed to escape its proper valuation and that a just and equitable assessment and taxation of the producing mine would not work a hardship on the mines as all would then bear their share and the tax rate could be reduced.¹⁴

In 1907 the legislature again enacted a law which provided for the taxation of mines according to their production.¹⁵ Mines were divided into two classes, (1) productive and (2) unproductive. All claims that produced \$3750 or more during the year, and groups of claims belonging to the same owner that have produced \$3750 or more per claim were included in the class of productive mines. The second class included all mines and mining claims not in the first class. All mines in this class were taxed as other property. Unpatented mines or mining claims which were unproductive were exempt from taxation except the improvements, which in all cases were taxed.

Owners of productive mines of the first class were required to report under oath the tonnage and market value of the ore produced. The assessor was required to determine the gross value of the output "on the average market quotation of each such metal in New York City and 25 percent of the gross value in money" was taken as constituting the total amount from which the levy of taxes for the current year was made. No other tax was levied upon mines in this class except a property tax on machinery, equipment, and personal property. When the surface of mining claims was used for other than mining purposes, it was taxed in the same manner as other surface property similarly used.¹⁶

Governor R. E. Sloan, in an address made at the second meeting of Governors¹⁷ defended the system of assessing and taxing mines then operative in Arizona on the ground that few mines were sold and the market value of mines could not readily

¹⁴*Report of Governor*, 1903, p. 13.

¹⁵*Laws of Arizona*, 1907, chap. 20, p. 23.

¹⁶The Phoenix correspondent of the *Engineering and Mining Journal* commented upon this law as follows: "Generally, the law has been considered fair and reasonable, although, as is the case with any application of the gross output for a taxation standard, the low-grade mines pay out of proportion to the high-grade mines, considering net earnings as the actual value standard of any operation. Apparently the mine owners are not dissatisfied with the form or substance of the present law." *Engineering and Mining Journal*, 1912, XCIII, 500.

¹⁷*Proceedings of Second Meeting of Governors*, Washington, 1910, p. 146.

be determined by assessors who were without the means of determining their value by actual examination and test. He reported that in 1910 the method in use met with "general approval" although when the system was adopted in 1907 "there was much and strong opposition" to it.

On April 30, 1912, the law of 1907 was repealed and mines were then taxed as other property upon an ad valorem basis.¹⁸ In 1912 the Tax Commission increased the assessed valuation of mines from \$14,000,000 to \$32,000,000. Two members of the Tax Commission advised¹⁹ the adoption of a law providing for a classification of mines and assessment according to both the gross and the net value of the output. These two commissioners favored a valuation upon an ad valorem basis if the system of valuation upon gross and net output was not adopted. The third commissioner preferred valuation and taxation upon an ad valorem basis but for the time favored "a graduated tax on the producing mines". In 1913 the Arizona legislature enacted a law providing for the valuation of mines according to the gross and net output.²⁰ The law was in force only two years as specified in the act. This act classified mining property as (1) producing mines and mining claims and (2) non-producing mines and mining claims, which included all mining property not in class 1.

Producing mines and mining claims were defined to be those which, after deducting the expenses of operation and such other expenses as were permitted by the Act, yielded net proceeds, or a number of claims worked under one ownership, any one or all of which after deducting the expenses of operation and such other expenses as were permitted, yielded net proceeds.

The Tax Commission determined the gross product and the net proceeds. The mining companies made annually a certified statement to the Tax Commission and upon the data thus secured, the gross value of the product was determined. The prices used were based on New York quotations for the year covered by the report. The net proceeds were determined by

¹⁸Laws of Arizona, 1912, p. 124. The constitution provides that "the manner, method, and mode of assessing, equalizing, and levying taxes in the state of Arizona shall be such as may be prosecuted by law." *Constitution*, Art. IX., sec. II.

¹⁹*Special Report of State Tax Commission of Arizona on Mining Taxation*, 1913. pp. 6, 8, and 16.

²⁰*Revised Statutes of Arizona*, 1913, sec. 4980-4994.

subtracting from the gross the following: "All moneys spent for necessary labor, machinery, and supplies needed and used in the mining operations, for betterments necessary in and about the workings of the mine, for the treatment and reduction of ores, for the repair and betterment of mills and reduction works used and operated in connection with the mine, for transporting the ore and the conversion of the products into money or its equivalent." Such expenditures were not to include "money invested as the purchase price of the mine, in real estate or the construction of new mills or reduction works, nor the salaries or any portion thereof, of any persons, agent or officers not actually and consecutively engaged in working the mine or in personally superintending the management thereof within the state of Arizona".

Mines were valued by the Commission at four times the net proceeds plus one-eighth of the gross. Upon this valuation there was levied the same rate as was applied to property in general. All mines not having net proceeds were taxed as was other real estate. Improvements of all kinds upon both producing and non-producing mines or claims were not exempted from taxation. The law specified that nothing in the act should be "taken or construed to be a tax on either the gross or net proceeds of earnings," the purpose of the act being simply to secure a basis for valuation.

In 1911 the mines paid 19.3 percent of the state taxes; in 1912, 31.7 percent; and in 1913, 37.2 percent.²²

There was introduced in the Second Legislature, 1915, a bill²³ providing for the assessment and taxation of mines upon practically the same basis as specified in the Act of 1913. However the gross, according to the bill, would have been computed upon the average New York price of metals for the preceding ten years. This bill failed to pass and, no other legislation having been enacted, mines will be taxed²⁴ as other property.²⁵

COLORADO²⁶

Colorado has been an important producer of minerals for many years. It is reported that gold was found on Cherry Creek near Denver in 1849, but the real mining began with the discoveries of gold in the Clear Creek District in 1858 and 1859.

The early records²⁷ of the mining districts show that before Colorado was organized as a territory, the local rules provided for minor forms of taxation such as road taxes at a flat rate per mining claim. Output taxes were not favored in the early days.²⁸ The State Constitution provided²⁹ that for a period of ten years from July 1, 1876, mines should be exempt from taxation except the net proceeds and surface improvements. The constitution specified also that the general assembly should provide general laws for assessing property and collecting taxes. As the legislature failed to enact any laws for the taxation of mines until April 4, 1887, there was no authority for collecting taxes based upon either the net proceeds and the actual value of the improvements or the mines. Attempts were made, notably in Lake County, to force the mines to pay some taxes. In *Stanley v. Little Pittsburg Mining Company*³⁰ it was held by the court that locally mines could not be taxed until the legislature had provided machinery for carrying out the permission and instructions of the constitution. In 1882 the legislature enacted a bill providing for the assessment of mines and for ascertaining the net proceeds but the act was vetoed by the Governor. On April 4, 1887, the Colorado legislature³¹ enacted

²⁹Art. X, sec. 3.

³⁰6 Colorado 416, (1882).

³¹In 1886 the Colorado Supreme court was asked by the State Legislature to render an opinion in regard to the constitutionality of certain

laws providing for the taxation of mines previously exempt under the constitution.³² By these laws³³ no mines or mining property were exempt from taxation and producing mines, having an output exceeding in value \$1000, were to be assessed at one-fifth of the gross proceeds to be determined by the assessor. Unpatented claims were taxable upon the same basis, the right of possession being recognized as the object of the assessment.

Prior to the Act of 1887, mines paid no taxes except upon surface improvements. This act continued in force until 1902 when a new law was enacted³⁴ which for the purpose of assessment and taxation classified mining property as producing and non-producing. When the gross value of the product exceeded five thousand dollars, the property was classed as producing; if less than five thousand dollars it was classed as non-producing. A certified annual statement of output and operating expenses was required from all mining companies. Net proceeds were determined by deducting from the gross the actual cost of mining, transporting, and treating the ore. The value of the mine was fixed at one-fourth of the gross unless the net exceeded this amount in which event an amount equal to the net proceeds was taken as the value of the property.

The assessor was instructed that he should not assess a non-producing mining claim at a greater sum per acre than was assessed against the lowest producing mine or mining claim situated in the same locality.³⁵ Possessory rights to mining claims were taxable. Surface improvements were valued separately and taxed at their full cash value. Mines of coal, iron, asphaltum, quarries, and lands valuable for other metals, minerals or earths were assessed and taxed as other property.

In 1913 important changes were made again.³⁶ Under the law of 1913, producing mines and mining claims were valued

proposed measures providing for the assessment and taxation of mines. The several proposed measures attempted to fix by law the actual amount at which mining claims should be assessed. In the opinion of the court (9 Colo. 623) the assessing of property was delegated to certain officers and was not to be attempted by the state legislature.

at a sum equal to one-half of gross proceeds plus all the net proceeds.

There was considerable dissension over the definition of gross proceeds as used in the law. On November 16, 1913, the Colorado District Court defined "gross proceeds" as "the amount of money received after deducting freight and treatment charges".³⁷

However, this definition of gross proceeds was modified by the decision on the rehearing, March 2, 1914. The court held the gross proceeds of a mine to be the sum received by its owner from the sale of his ore at the mine. When the ore is not sold at the mine this construction necessitates the deduction of all

In passing upon the constitutionality of the Colorado law³⁹ of 1913 the Supreme Court of Colorado said,⁴⁰ after reviewing the history of mine tax laws in Colorado: "The legislature did not intend that the fractions mentioned in these different statutes should arbitrarily represent the net proceeds, as in the Act transportation, reduction and treatment charges in order to arrive at the gross proceeds."³⁸

³⁷The difficulty arose on account of conditions in the Cripple Creek District. Some of the mines sold the gold ore to local ore-buyers, others shipped to mills and smelters outside the district, and others treated the ore locally in their own plants. The mine operator who sold ore received as "gross proceeds" from the ore-buyer an amount which was the "net" after the treatment, transportation, and other charges were deducted. The question then was whether "gross" should mean the actual value of the recoverable gold in the ore, or the real sale price (for the operator) of the ore. In commenting on this situation a member of the Colorado Tax Commission said: "We recommended to the legislature the bill changing the assessment to 50 percent of the gross and all of the net from the metalliferous mines. The supreme court had defined gross, and then later on changed the definition and made it mean the sum received by the owner from the sale of his ores. The result of this decision makes it necessary to deduct the transportation, reduction and treatment charges so that the consequence has been a considerable reduction in the valuation of the mining counties. This, of course, throws the burden of taxation onto other property in those counties. Somewhere between 8 and 10 millions of dollars of valuation were lost, I believe this year." J. B. Phillips in "Legislative and administrative problems in Colorado", *Proc. Nat. Tax Assn.*, 1914, VIII., 96.

³⁸*Paxson v. Cresson Consolidated G. M. Co.*, 139 Pacific 531, (1914).

³⁹*Laws of Colorado*, 1913, p. 566, sec. 2.

⁴⁰*Tallon v. Vindicator Consolidated Gold Mining Co.*, 149 Pacific 108, (1915).

of 1902 it provided that the net proceeds should be taxed only if it exceeded one-fourth the gross proceeds, and the act provides the gross proceeds shall be obtained by deducting the cost of transportation and treatment, and the net proceeds shall be ascertained not by an arbitrary fraction of the gross but by deducting from the gross the cost of reduction, and then that a fraction of the gross plus all the net obtained in this way shall be a sum equal to the value of the mine for taxation; and while the legislature could not say that one-half the gross proceeds plus all the net in fact equals the value of the mine, yet it could lawfully say that the amount so determined should represent the value of the mine for taxation, and in this way it provides a rule for arriving at the value of producing mines for taxation and is constitutional."

The Legislature of 1915 changed the law of 1913 and now all producing metal mines are valued for taxation at one-fourth of their gross production unless their net output exceeds one-fourth of the gross in which case the net is taken. If any number of contiguous claims, owned or operated as one property by the same person, persons, association or corporation, have a gross production in excess of \$5000 per annum, the property is considered as one producing mine and taxed as such under the existing law.⁴¹

The assessed valuation⁴² of the metal mining property during the years 1912, 1913, 1914, and 1915 follows:

	1912	1913	1914	1915
Assessed valuation.....	\$18,012,830	\$46,042,067	\$41,468,531	\$32,945,057
Percent of total valuation of state.....	4.27	3.52	3.17	2.64

In the fifteen principal mining counties of the state the valuations during the years 1912, 1913, 1914, and 1915 have been as follows:⁴³

	Mining property	All other property
Assessed value 1912.....	\$17,896,172	\$ 36,947,647
1913.....	43,546,803	109,446,426
1914.....	38,355,744	107,446,395
1915.....	30,479,507	104,513,582

IDAHO⁴⁵

Although gold was discovered on the Pen d'Orielle River in 1852, extensive gold mining did not begin in Idaho until the following decade. Today, Idaho is famous particularly for lead-silver mines and mines of this character were not opened until 1873.⁴⁶

In 1866 Idaho Territory first enacted laws regulating mining locations. The Constitution of 1889 does not provide specifically for the taxation of mines, but requires that taxes shall be uniform upon the same class of subjects.⁴⁷

In 1903, the legislature enacted a law providing that mines should be taxed upon the basis of net profits, which are determined from certified statements made annually by the mining companies. The net profits⁴⁸ are determined by deducting from the amount received for the ore the actual expenditures of money and labor in extracting, transporting, reducing, and marketing the ore, and for supplies and machinery. Unpatented mining claims are not taxed.

Governor suggested that the law providing for the tax upon net proceeds is probably unconstitutional.⁴⁹

LOUISIANA

The only important mineral products of Louisiana are salt, sulphur, natural gas and petroleum. The value of the output was \$15,357,841 in 1912, \$21,011,828 in 1913, and \$21,890,025 in 1914.⁵⁰

Louisiana has taxed mines under the general property tax⁵¹ and has also imposed license taxes on the business of mining. An act of 1910 created a conservation fund by levying and enforcing the payment of an annual license tax upon all persons, associations of persons, business firms and corporations for pursuing the business of severing timber and minerals from the soil.^{51a} This law was held to be unconstitutional as it was enacted by the General Assembly before an amendment authorizing such legislation had been voted upon by the people of the State.^{51b} In November 1910 the voters of Louisiana adopted an amendment to the Constitution (Article 229) providing that "those engaged in the business of severing natural resources, as timber and minerals, from the soil or water, whether they hereafter convert them by manufacture or not, may be rendered liable to a license tax; the amount to be collected may either be graduated or fixed." In 1912 an amendment to the Constitution was proposed, including a provision as follows: "Unless otherwise provided by the General Assembly by a vote of two-thirds of the members elected to each house, all operating mines of sulphur, salt or other minerals, all oil or gas wells, all stone quarries, sand, gravel and shell pits shall be taxed upon a percentage of the gross value of the product at the mouth of the mine, well, quarry, or pit. This percentage shall not exceed five percent for sulphur; three percent for salt; two and one-half percent for oil and gas, and two percent for rock and other minerals, inclusive of gravel, sand and shells. All real and personal property of the owners of such mines, wells, quarries and pits except machinery, tools and implements absolutely essential to the operation of any mine, oil, or gas well, stone quarry, sand, gravel or shell pit, and except the products them-

selves within the hands of the producer, shall be locally assessed and taxed." This proposed amendment was not adopted.^{51c}

The Legislature of 1912 enacted a law providing for an annual license tax upon each person, or association of persons, firms, or corporations pursuing the business of severing natural products, including all forms of timber, turpentine, and minerals, including oil, gas, sulphur and salt from the soil. The license tax imposed was one-half of one percent of the gross value of the total production, less the royalty interest accruing to the owner, the license on which was to be paid by the land or royalty owner. The value of all products was computed at the place where they were taken from the soil.⁵²

The Supreme Court of Louisiana in interpreting the law of 1912 which imposed a license tax on the business of severing minerals from the soil and which directed that, in computing the gross value of the product, the royalty should be deducted and that the license tax on the royalty interest should be paid by the owner of the land or royalty interest, held that the constitution authorized a license tax on those engaged in the mining business. "If the Legislature had undertaken to impose this license tax upon the land or royalty owner, not engaged in the business of severing natural products from the soil, it would have been without constitutional authority." The land owner or owner of the royalty interest was therefore released from paying a license tax when not actually engaged in the mining business.⁵³

In the Constitution of 1913 there is a provision for a license tax upon the business of mining, the amount collected being either graduated or fixed according to the quantity or value of the product at the place where it is severed.⁵⁴

In 1914 a law was enacted authorizing the Police Juries of the several parishes of the State of Louisiana to levy an annual license tax upon each person, or association of persons, firms or corporations, pursuing the business of severing natural products, viz., minerals, including oil, gas, sulphur and salt from the soil; provided the amount of the license tax shall not exceed the amount which is, or may be, similarly levied by the State of Louisiana.^{54a}

By an amendment adopted November, 1902, the capital,

machinery, and other property employed in mining operation was exempted from parochial and municipal taxation for ten years from January 1, 1900.⁵⁵

MICHIGAN

The state of Michigan has important mineral resources, notably iron, copper, coal, gypsum, salt, and building-stone. The value of the output in 1912 was \$80,062,486.⁵⁶ Michigan was admitted to the Union January 26, 1837, before the mineral resources were developed to an important degree and in fact before many of the most valuable deposits were known to exist. The presence of copper in the Upper Peninsula had been noted by explorers but the real discoveries began with the work of the Michigan Geological Survey which was created by an act of the legislature approved February 23, 1837.

Coal mining did not begin until 1835. Copper mining was begun on Keewenaw Point in 1842. A party of United States surveyors discovered iron ore near Teal Lake in 1844. Thus it was that shortly after Michigan became a state the problem of the taxation of the new mines and mineral resources required attention.

The first legislation providing for the taxation of mines was the Act of April 25, 1846. This prescribed a specific tax of four percent in lieu of all other state taxes to be levied upon all ores and the product of all mines, which tax was to be assessed

⁵³State v. Stiles, 68 Southern 947, (1915).

⁵⁴Constitution of 1913, Art. 229.

^{54a}Acts of Louisiana, 1914, Act 296, sec. 1.

⁵⁵The Louisiana Supreme Court in the case of J. M. Guffey & Co., of Pittsburg, v. J. L. Murrell, tax collector, of Crowley, La., decided that oil companies are not exempt from taxation under the act exempting capital, machinery and other property employed in mining operations for a period of ten years. The court declared: "Mining operations have to do with workings of a mine and neither in the ordinary nor in the scientific acceptance of the term 'mine' is the term 'oil well' included. Laws granting exemption from taxation must be strictly construed and so the operation of an oil well can not be held to be within the exemption granted to those engaged in mining operations." The decision was a heavy blow to oil interests in Louisiana as they had hoped to get exemption from taxation. *Engineering and Mining Journal*, 1910, XC, 1091.

⁵⁶*Mineral Resources of the United States*, 1912, p. 57. The value of the output was less in 1913 owing to the strike and also in 1914 due to the European war.

upon the average yield of the ores after being smelted, if smelted in the state; but if the ores were to be shipped out of the state before being smelted, the taxes were to be paid before the ores were removed from the premises where they were mined. This act also provided further that the tax on the product of the iron mines should not exceed two percent.⁵⁷

By an act approved April 8, 1851, an annual tax of one percent was levied on the whole amount of paid-in capital. Companies paying this tax were relieved of all state taxes on real and personal property.⁵⁸

The first tonnage tax law was enacted February 5, 1853. It provided that the following taxes be collected: one dollar for each ton of copper or mineral obtained, ten cents for each ton of iron ore, one-half cent for each ton of coal. These taxes were to be the only state taxes on these objects.⁵⁹

In 1855, the legislature definitely relieved domestic mining companies of the payment of taxes on capital stock provided they paid the tonnage taxes as prescribed by the law of 1853.⁶⁰ Township supervisors were instructed by an act in 1861 to assess the real and personal property of all mining companies not actually operating. This act provided also that all mining companies should be taxed on all land owned in excess of six hundred forty acres.⁶¹

The rates of the tonnage tax were changed by the legislature in 1865,⁶² in 1867, in 1871, and in 1872. By this last revision the rates became seventy-five cents a ton on copper smelted in the state and one dollar if smelted outside, one cent on iron ore, and one-half cent a ton on coal.⁶³

In 1873 the mining companies were required to furnish the assessor with a statement of the weight of copper produced and all copper was assessed at its cash value, as other personal property, for county and township purposes.⁶⁴

In 1875 the Michigan Supreme Court declared unconstitutional the law imposing a specific tax discriminating between

⁶⁴*Ibid.*, 1873, Act approved April 10.

ore smelted in the state and that shipped outside to be smelted, as being in restraint of interstate commerce.⁶⁵

The State Legislature in 1885 suspended for five years the specific tax so far as the same applied to "gold, silver, and lead and the ores of said minerals."⁶⁶ The tonnage tax was repealed in 1891 and thereafter all the property used in the business of mining, smelting, or refining was taxed for state and other purposes under the general provisions of the law relating to the assessment and taxation of property.⁶⁷

The legislature of 1911 provided specifically for the assessing and taxing of mineral rights severed from the ownership of the surface. Such mineral rights under this law were taxable as an interest in real property at the same rate and subject to all provisions of the law relating to the assessment and taxation of real property.⁶⁸ This law was repealed in 1915 and taxes under the law were discharged.⁶⁹

The legislature on April 25, 1911, directed the Board of State Tax Commissioners "to investigate, examine into, inventory and appraise all mining property in the State of Michigan and all mineral rights" and to report the result of the appraisal to the State Board of Equalization on or before the third Monday of August, 1911. An appropriation of thirty thousand dollars was made to cover the expense of this appraisal.⁷⁰

J. R. Finlay, an eminent mining engineer, was selected May 24, 1911, to appraise the mines of the state and on August 18 he filed his report. This was the first attempted appraisal for taxation of all the mines of a state by a staff of engineers not identified with an institution of the state. The appraisers could not undertake a detailed examination of all the mines, but the work done was remarkable in its extent considering the length of time allotted to the appraisal. The report filed covers the copper, iron, and coal mines but the appraisers decided that the Michigan salt, gypsum, cement, brick-clay, marl, and limestone operations should not be classed as mines. They also did not attempt to place a value upon undeveloped mineral lands.

The Board of Tax Commissioners in its report of December 14, 1912, suggested to the Governor that the State Geological

Survey cooperate and furnish data on the value of the mineral lands of the state. There is now cooperation between the Geological Survey and the Tax Commission, the State Geologist acting in the capacity of appraiser of mines.⁷¹ Trained assistants have been employed for this work, the necessary funds to carry on the work having been provided by an act of the legislature. The copper mines however have not been appraised by the State Geologist.

MINNESOTA

Shortly after Minnesota was organized as a territory in 1849, iron ore was reported near Gunflint Lake.⁷² When the state was admitted to the Union in 1858 none of the important ranges had been discovered. Iron ore was discovered on the Vermilion Range in 1865,⁷³ but the first shipments were not made until 1884. Mesabi Range shipments were made in 1892, two years after the boom on that range began.

In 1881 the legislature enacted a law⁷⁴ providing that mining companies might pay annually in lieu of all other taxes, "on each ton of copper fifty cents, on each ton of iron ore mined and shipped or disposed of one cent for each ton, one-half of such payments to be credited to the General Fund of the state and the other half credited to the county or counties in which such mines" were located. This law was in effect until March 9, 1897, when it was repealed by the legislature. On May 19, 1896, the tonnage law was declared unconstitutional. A constitutional amendment was adopted permitting the taxation of mines on quantity of production or in such other manner as the legislature might determine. During the year following the repeal of the tonnage tax, mines were taxed as other property.

In 1902, the Minnesota Tax Commission advised⁷⁵ that the unanimous opinion of the Commission was that a "tonnage tax is the only appropriate means for the taxation of the output of mines." The tonnage tax recommended by this commission was to be graduated with regard to the value and the grade of ores.

The assessors working under the general property tax were unable to value the mines and secure justice among the various

mines, and between mines and other property. Great dissatisfaction resulted until 1907, when the Tax Commission was created and the problem of valuing the iron-mines was referred to the commission. The commission made as careful a study as was possible in the time available and adopted a basis for valuation which has been used in later appraisals.⁷⁶

No important changes in the law have been made as it affects mines since the Tax Commission was created by the law of 1913, which specifies that mines shall be assessed at fifty cents on the dollar.⁷⁷

In 1906 the state received in taxes from the iron mines \$179,272; in 1914, the state taxes paid by the iron mines amounted to \$1,314,538. At a 4-mill state tax rate and on a conservative ore exhaustion period there would be approximately a total of future tax revenue of \$28,000,000. It is evident that the Tax Commission has been instrumental in discovering a source of state revenues and in levying increased taxes upon the iron mines.

MONTANA

The mineral resources of Montana are of great importance and the revenue which the state derives from the mines in the form of taxes has proven of great assistance in conducting the affairs of the state.

As early as 1804, the Lewis and Clarke expedition noted coal along the Missouri River, but the first mining was for gold at Bannack in 1862. Placer gold mining was at its height in 1867, three years after the territory was organized. Silver mining followed the discovery of lodes in 1864, was at its height in 1887, and continued until 1892. Copper mining became of importance after the discovery of copper ore in the Anaconda shaft in 1882.

Taxation of mines received attention at an early date. By the law of 1872 both the proceeds and the capital stock of companies were subject to taxation.⁷⁸

The present practice of taxing the net proceeds of mines was practically started in 1879.⁷⁹ Deductions from the gross

receipts may be made for the cost of extracting the ore from the mine, reducing it, and converting it into bullion. The Constitution provides that all mining claims assessed⁸⁰ at the price paid the United States for the land, all machinery and improvements having a value separate from the mines or mining claim, and the net proceeds of all mines and mining claims shall be taxed as provided by law. The statutes provide that mines shall pay a tax on net proceeds and on improvements.⁸¹ This law has been interpreted by the courts as applicable to coal mines.⁸²

The right to minerals has been held⁸³ to be taxable both when the claims are not patented and when the right to the minerals is severed from the surface and reserved upon the sale of the surface.⁸⁴

NEVADA

In 1849 gold was discovered in Gold Canon and in 1859 the Comstock lode was opened. On March 2, 1861, the territory of Nevada was organized. The taxation of mines at once received attention and in 1861 a law was enacted⁸⁵ which exempted mining claims, except machinery and improvements. In 1862 the proceeds of mines were taxed.⁸⁶ At the first constitutional convention, held in 1863, it was proposed that all property, including mines and mining claims, should be taxed uniformly but the constitution framed by the convention was not adopted by the voters of the state. The second constitutional convention met in 1864 and proposed a constitution containing an article which provided that the legislature should enact laws for the taxation of mines upon net proceeds alone. This constitution was accepted by the voters.^{86a} At the first⁸⁷ session of the legislature a tax of 100 cents on the \$100 valuation was levied upon the net proceeds of mines.⁸⁸ All of the ores were assessed as follows: From the gross return per ton of ore was deducted twenty dollars per

⁸⁷Nevada was admitted to the Union Oct. 31, 1864.

⁸⁸*Laws of Nevada*, 1864-65, chap. LXXXV, sec. 99.

ton and seventy-five percent of the remainder was taxed.⁸⁹ If the value of the ores was not established, they were to be assessed at five hundred dollars per ton. Ores valued at less than twenty dollars were not assessed. In 1867 the law was amended⁹⁰ in order to make allowance for the refractoriness of ores. A deduction of eighteen dollars per ton was to be allowed for the treatment of ordinary ores but when the ore was worked by the Freiberg or roasting process or by any smelting process a deduction of forty dollars per ton was permitted. The tax rate was \$1.25 per \$100 valuation.

Additional changes were made by the legislature in 1871.⁹¹ The net proceeds were determined by deducting from the gross the actual cost of mining, melting, transporting, and smelting. When the value of the ore was less than \$12, the deduction was not to exceed 90 percent of the gross value of the ore; not over 80 percent deduction was permitted on ore valued at \$12 to \$30; not over 60 percent on ore valued at \$30 to \$100; not over 50 percent on ore valued at more than \$100. An additional deduction of \$15 was permitted for ores treated by the Freiberg process.

By the law of 1891⁹² the net proceeds were assessed and taxed at the same rate *ad valorem* as other property is taxed. The county assessors were authorized by the legislature of 1901,⁹³ to meet annually in order to value uniformly the property of the state. The assessors thus practically formed a state board of appraisers.

The office of State License and Bullion Tax Agent was created in 1905, and the duty of enforcing the law providing for the taxation of the net proceeds of mines was placed upon him.⁹⁴ The Constitution as amended in 1906 provides that patented claims shall be assessed at not less than five hundred dollars, except when one hundred dollars in labor has been actually performed on such patented mine during the year, in addition to the tax upon the net proceeds.⁹⁵

⁸⁹In *State v. Estabrook* (3 Nevada 173) it was held that the part of the law which directed that the tax be levied on three-fourths of the value instead of the full value was unconstitutional.

⁹⁰*Statutes of Nevada*, 1867, Special Session, chap. III, sec. 3.

⁹²*Ibid.*, 1891, p. 162.

⁹³*Ibid.*, 1901, p. 61.

⁹⁴*Ibid.*, 1905, p. 226.

⁹⁵Constitution, Art. X, sec. 1.

It was the general opinion that the mining companies were evading the law. The Bullion Tax Agent pointed out⁹⁶ various defects in the law, notably the irregularities which resulted from permitting the mining companies to make deductions for the cost of milling. Separate milling companies had been organized and the profit was made through the milling company which was taxed upon plant and not upon proceeds. Recommendation was made by the Bullion Tax Agent that the administration of the tax upon net proceeds be placed under a state tax commission. In 1912, a committee of citizens was appointed to investigate taxation in Nevada and to make recommendations. The report of this committee included several recommendations,⁹⁷ notably, that a permanent tax commission be created and that the constitution be amended to permit a graduated tax upon the gross output of mines instead of the tax on the net proceeds now in force.

As a result of the work of this committee the Nevada Tax Commission was created⁹⁸ and the office of Bullion Tax Agent abolished. This Commission is charged with the duty of determining the net proceeds of mines and is given the power to decide what charges are "just, proper and reasonable, and not introduced to deprive or defraud the State."⁹⁹ The Commission found that most of the mining companies were maintaining secondary milling and transportation companies which were defeating the bullion tax. The Nevada Mine Operators' Association suggested a conference between its executive committee and the Tax Commission¹⁰⁰ and at this conference an effort was made to suggest means of correcting abuses and of providing for the equalization of the tax burden. "It was proposed by the mine operators that for 1913 the mines would abolish their milling and transportation subdivisions, and report the actual 'net proceeds' from all their operations, but that a flat charge of \$3 per ton should be allowed in addition to the legal deduction from the value of the gross yields in figuring the net, this flat charge to reduce to \$2 in 1914, and to \$1 in 1915 and thereafter."

This proposal was rejected by the Tax Commission for the reason that many mining companies in Nevada were not making

¹⁰⁰*Report of Nevada Tax Commission*, 1913-1914, p. 18.

\$3, \$2, or even \$1 per ton and would by the operation of any flat-rate exemption be relieved from the payment of any taxes at all. The operators also requested permission to make a charge for depreciation of their plants. The Tax Commission carefully considered the entire matter and made a definite proposal to the operators at a conference on September 9, 1913, which proposal was formally accepted by the operators.

The proposed rule¹⁰¹ for the assessment of mines in 1913 follows:

AGREEMENT

The Nevada Tax Commission proposes the following procedure for general adoption throughout the State, in assessing the mining industry for taxation during and covering the entire year 1913:

IMPROVEMENTS

To be assessed as other property is assessed in the county in which it is situated.

ASSESSMENT OF THE NET PROCEEDS OF MINES

The net proceeds of any mine shall be determined as follows:

From the actual value of the gross yield (in any quarter) shall be deducted the sum of the following items of expense:

(1) *Management*

All necessary current administrative expenses, excepting:

- (a) Federal, state, or county taxes.
- (b) Payments of interest on bonds or other indebtedness.
- (c) Expenses of maintaining offices other than the mine office.

(2) *Cost of Extracting*

- (a) All necessary current mining expense (not including apportionment of general administrative expense) including expense of contemporaneous development and exploration of the mine itself.
- (b) A depreciation charge which shall be equivalent to quarter-annual installment of the amount calculated to be written off annually to redeem 80 percent of the original and all subsequent investments in mine plant or improvements (not including repair and maintenance charges against operation account), within the entire estimated life of the plant, including the time during which it has been used plus its estimated residual life which may equal but not exceed the estimated life of the mine. Such depreciation or redemption charges shall cease when 80 percent of any investment in improvements shall have been charged off in the manner provided in the foregoing.

¹⁰¹*Report of Nevada Tax Commission, 1913-1914, p. 18.*

(3) *Cost of Transportation*

Where the transportation facilities used in conveying the mine products from the mine to the place of reduction or sale are owned directly or indirectly by the company:

- (a) The actual expense of operating such plant facilities, exclusive of general or administrative expense.
- (b) A depreciation charge calculated in each case to redeem 80 percent of the original investment in transportation facilities, in the same manner as mine-plant depreciation is figured.

Where the said mine products are transported by common carrier or by facilities not owned by the company and from which it derives no revenue:

- (a) The actual amount paid for the carriage of the said mine products with no allowance for depreciation.

(4) *Cost of Reduction or Sale*

Where the reduction works in which the mine products are treated are owned directly or indirectly by the company:

- (a) The actual expense of reduction or treatment or sale of product, exclusive of general or administrative expense.
- (b) A depreciation charge calculated in each case to redeem 80 percent of the investment in reduction works in the same manner as mine-plant depreciation is figured.

Where the mine products are treated in plants not owned by the company and from the operation of which it derives no revenue:

- (a) The actual amount paid for the treatment or reduction of the ores, and marketing of the product, with no allowance for depreciation.

The sums of items (1), (2), and (4) shall constitute the offset deduction from the gross yield for the determination of the actual net yield, and the remainder shall be the actual net yield for the purpose of taxation. To assess the mining industry on the same percentage of actual value as that at which other property is assessed, which is determined for 1913 as 60 percent of the actual cash value as an average for the State, a further deduction from the value of the gross yield equivalent to 40 percent of the actual net yield, as hereinbefore defined, shall be allowed and this shall be charged to management, extraction, transportation, reduction and sale, in equal proportion to each of the four said items.

The acceptance of this proposal by the Nevada Tax Commission as its rule of action, in fixing the assessment of the net yield of all mines of the State, shall be absolutely contingent on the entire abolition of the so-called secondary milling and transportation companies, as far as the statements and accounts rendered the said Commission are concerned.

The actual earnings of Nevada gold and silver mines in 1913 were much less than in 1912, but the taxes levied upon the net

proceeds of mines amounted to \$56,574.94 in 1912, and to \$182,076.37 in 1913. This increase was due primarily to the elimination of the subsidiary milling and transportation companies.

In determining the valuation of the net proceeds for 1914, the Tax Commission made a proposal to the mine operators that they should take their choice of two alternative propositions: (1) the assessment of 80 percent of the net proceeds determined as in 1913, or (2) the assessment of 60 percent of the net without depreciation. As the Attorney-General decided that depreciation was not authorized by the statute, the mine operators accepted the appraisal at 60 percent without depreciation.

The Tax Commission adopted the following rule¹⁰² for the assessment of mines in 1914:

The net proceeds of any mine shall be determined as follows:

From the actual value of the gross yield in any quarter-year shall be deducted the following items of expense incurred in the same quarter:

(1) *Management*

All ordinary and necessary administrative expense, excepting:

- (a) Payments on principal or interest on bonds or other indebtedness.
- (b) The expense of maintaining offices outside of the State of Nevada.

(2) *Mining*

All ordinary and necessary expenditures actually made for mining (exclusive of general or administrative expenses) including the cost of contemporaneous development and exploration of the mine itself.

(3) *Transportation*

- (a) Where the transportation facilities used in conveying the mine products from the mine to the place of reduction or sale are owned or controlled directly or indirectly by the mining company: The actual expense of reduction or treatment or sale of the said products.

The actual necessary expenditures for the maintenance and repair of mine, transportation and milling or reduction plants may be included in the foregoing deductions, but no charge whatever for depreciation or the redemption of any investment in mine ground, development done prior to the quarter for which the report is made, or plant construction shall be allowed.

The sums of items (1), (2), (3), and (4) shall constitute the offset deductions against the value of the gross yield, and the

¹⁰²*Ibid.*, p. 21.

difference in each case between the said gross yield and the said sum shall be deemed the net proceeds for the purpose of taxation.

To equalize the mine assessment with that of other property, 60 percent of the net proceeds determined as provided in the foregoing shall be assessed—this rule applying to all mines from which the ore is extracted directly by the owners. In the case of producing “leases” the lessee shall be entitled to deduct, in addition to the items enumerated, the royalties actually paid to the lessor, but royalties received by any lessor shall be reported separate from other receipts and 60 percent thereof shall be assessed with no deduction whatever.

NEW MEXICO

While New Mexico has never ranked as one of the leading mining states, the mineral wealth of the state is relatively of great importance when compared with the other resources. As early as 1770 Santa Rita was a flourishing gold district.¹⁰³

The Territory of New Mexico was organized December 13, 1850, and on January 18, 1865, the Territory enacted laws regulating the location of mining claims. During the succeeding years mining continued to attract attention although few important mines or districts were developed. In later years the coal and low-grade copper deposits have received much attention. The value of the mineral output was \$14,391,355 in 1912, \$17,862,369 in 1913, and \$18,072,919 in 1914.¹⁰⁴

Under the Territorial Government all property was taxed upon an ad valorem basis until 1891 when a law was enacted authorizing a tax upon the net product of mines. The Constitution, adopted and ratified January 21, 1911, specifies¹⁰⁵ that the legislature shall have power to provide for the levy of specific taxes, including “taxes upon the production and output of mines, oil lands and forests; but no double taxation shall be permitted.”

In 1891 the legislature had provided for the taxation of mines and mining claims upon “the net product and upon surface improvements only.”¹⁰⁶ The same legislature provided for the exemption of mining claims, but not the net product and surface improvements thereof, for a period of ten years after location.¹⁰⁷

¹⁰⁵Art. VIII, sec. 2.

¹⁰⁶*Laws of New Mexico, 1891, chap. 77.*

¹⁰⁷*Ibid., 1913, chap. 84, sec. 2.*

In 1913 the legislature specified that property should be listed for taxation at one-third of its cost value. The second state legislature enacted a law providing that mines, mining claims, or mineral lands be divided into two classes, (1) productive and (2) non-productive. Productive mines and mineral lands are those mined in good faith for the mineral values with a fair degree of continuity throughout the year. Productive mines are taxed upon the net value of the mineral extracted at the same rate as other properties are taxed in the county or other subdivision in which such mine is situated. All non-productive patented mining claims and other non-productive mineral lands are assessed and taxed upon a reasonable valuation for the minerals in addition to the surface value for other than mining purposes.¹⁰⁸

OHIO

The value of the mineral output of Ohio increased from \$111,229,656 in 1912 to \$121,690,661 in 1913, but decreased to \$101,661,384 in 1914.¹⁰⁹ The most important minerals produced are coal, natural gas, and petroleum.

The property tax has been used in Ohio since 1825¹¹⁰ and the tax law essentially in its present form was enacted in 1846. Property is assessed locally and taxed for state and local purposes. In assessing property its value for mining purposes is considered. As minerals are mined proper deductions from the assessed value are made. Mineral rights are assessed separately when they are owned separately.¹¹¹

The assessment of real property is made quadrennially¹¹² and of personal property annually. The assessor when appraising personal property makes a list of all new mines, wells, etc.,

¹⁰⁸*Ibid.*, 1915, chap. 55.

¹⁰⁹*Mineral Resources of the United States*, 1914, p. 32.*

¹¹⁰Bogart, E. L. Financial history of Ohio. *University of Illinois Studies in Social Sciences*, 1912, I, 181.

¹¹¹Apparently this section of the law was ignored by the assessors in 1901 as the assessed value of coal and oil lands in three counties totalled \$298,794. The value of the separately owned mineral rights as determined by the Commission in 1911 was \$17,925,993. (*Second Annual Report, Ohio Tax Commission*, 1911).

¹¹²Prior to 1911 the assessing was done by local officers elected decennially. Real estate was valued in 1826, 1835, 1841, 1847, 1854, 1861, 1871, 1881, 1891, 1901, and 1911.

begun or constructed since the last preceding quadrennial appraisement.¹¹³

At an election held September 3, 1912 the constitution was amended so that "laws may be passed providing for the imposition of taxes upon the production of coal, oil, gas, and other minerals."¹¹⁴

OKLAHOMA

The State of Oklahoma is an important producer of minerals, principally coal, petroleum, natural gas, and zinc. The value of the output was \$53,614,130 in 1912, \$80,150,820 in 1913, and \$78,744,447 in 1914.¹¹⁵

The policy of Oklahoma has been to levy state taxes upon gross product and also a property tax for state, county, and local purposes upon all improvements. The Constitution authorizes the legislature to levy gross revenue, income, production, or other specific taxes.¹¹⁶ Taxes upon gross production have been supported by the courts as being taxes upon business and not upon property.¹¹⁷

In valuing non-producing mineral lands the assessors are required to consider and appraise minerals and mineral rights.¹¹⁸

The tax upon gross production is a percentage of the gross receipts after deductions are made for royalties. The important features of the present law were first enacted May 26, 1908,¹¹⁹ and were amended in 1909.¹²⁰ In 1910 a new statute was enacted and the rates or percentages were changed.¹²¹ The early laws taxing gross receipts specified coal as well as other mineral products.

The law was amended again in 1913,¹²² in 1915,¹²³ and also by the legislature in 1916.¹²⁴ The law of 1915 provided that the tax levied should be in lieu of any other taxes that might

be levied and collected on an ad valorem basis upon the equipment and machinery in and around any well or mine and used in the actual operation of such well or mine. It has been held that the law is not for the purpose of exempting the equipment and machinery from taxation but to permit the levying of a gross production tax in lieu of any other tax that might be levied and collected on such property upon an ad valorem basis. This is not an exemption from taxation as prohibited by the constitution of Oklahoma.¹²⁵

The law of 1908 provided for a tax of 2 per cent on the gross proceeds of coal mines, the law of 1909 reduced the tax to one-half of one percent, and in the law of 1915 coal mines are not specified. The rate on petroleum and natural gas has also been changed, the rate in 1909 having been one-half of one per cent, in 1913 three-fourths of one per cent, and in 1915 two per cent, while in 1916 the rate was increased to three per cent. the tax on metalliferous mines has undergone practically no change, the rate in 1909 having been one-half of one per cent the same as in 1916.

In considering the power of the legislature to distinguish, select, and classify objects of taxation the court held that the legislature has a wide range of discretion. While the classification must be reasonable there is no precise rule of reasonableness and there cannot be an exact exclusion or inclusion of persons and things. The classification adopted must always rest upon some difference which bears a reasonable and just relation to the act, in respect to which the classification is proposed, and can never be made arbitrarily and without any such basis. A statute levying one rate of tax on oil and gas and a lesser rate on ores bearing lead, zinc, jack, gold, silver, copper, or asphalt, and which omits a gross production tax on coal, is not repugnant to the provision of the constitution to the effect that taxes shall be uniform upon the same class of subjects. Mining property or the business of mining may be placed in a class by itself and taxed by some method peculiarly appropriate to that class, and the legislature may arrange and divide the various subjects of taxation into various classes, providing the tax is uniform upon all those belonging in the same class and upon which it operates.¹²⁶

¹²⁵In re Gross Production Tax Wolverine Oil Co., 154 Pacific 362, (1916).

¹²⁶*Ibid.*, p. 362.

The taxes upon gross production are levied and assessed by the State Auditor. According to the law of 1916 the royalty interest is taxed under the gross production tax, the owner of the royalty interest paying the tax. As previously noted the gross production tax is in lieu and in full of all taxes by the state, counties, cities, towns, townships, school districts and other municipalities upon any property rights attached to or inherent in the right to the minerals or the mining rights and privileges, upon the machinery, appliances, and equipment used in and around the property in producing the mineral, and upon the product during the tax year in which it is produced. Any other rights in the property and mineral in storage the year following its production are assessed and taxed as other property in the taxing district.¹²⁷

The graduated land tax has a tendency to restrict the quantity of mineral land controlled by mining interests.¹²⁸

PENNSYLVANIA

The value of the mineral output of Pennsylvania greatly exceeds that of any other state, the value having been \$445,799,653 in 1912, \$506,466,759 in 1913 and \$452,374,085 in 1914.¹²⁹ The most important products are coal, petroleum, and natural gas.

In 1844 Pennsylvania enacted laws regulating assessment of property, and these have continued to be the principal features of the laws which have controlled the valuation of mines and mineral lands. In 1857 it was held that coal and land could be assessed separately.¹³⁰

The legislature enacted a law August 25, 1864 levying a tax upon railroad and navigation companies on the tonnage carried, the rate varying with the character of the commodity. The rate on the product of mines, quarries, and clay beds, in the condition in which the product was taken from the ground, was two cents a ton.¹³¹

In 1868 transportation companies having the right to mine, purchase, or sell anthracite or having the right to lease from or to parties the lands or mines from which anthracite is taken

¹²⁷*Laws of Oklahoma*, 1916, p. 104.

were required to pay a state tax of four cents a ton upon all coal mined or purchased. This tax was in lieu of other state taxes including the tax upon the transportation of coal.¹³²

The courts held that mined coal is personal property when in the mine as well as when stored on the surface.¹³³

It is interesting to note that, in chartering the Miners' Hospital and Asylum of Schuylkill County on April 5, 1870, the Pennsylvania Legislature imposed a tax of one cent upon each ton of coal transported over the railroads in the county. This tax was to provide funds for the erection, maintenance, and endowment of the hospital and the owners of the coal were authorized to charge one cent more than the price at which the coal had been sold under contract. This tax was to be collected until, in the opinion of the Board of Managers of the Hospital, sufficient had been collected to purchase the necessary grounds, erect and furnish the buildings, pay the current expenses and create a permanent fund the interest of which would be sufficient to provide for the yearly expenses of the Hospital. The Legislature specified however that the total amount collected should not exceed five hundred thousand dollars.¹³⁴

By the Act of April 24, 1874, the legislature levied a franchise tax upon every corporation operating in Pennsylvania and possessing the corporate right or privilege to mine or to purchase or sell coal. This tax upon the corporate franchise was payable into the treasury of the commonwealth and was at the rate of three cents upon each ton (2240) of coal so mined or purchased, "provided that the amount of coal consumed in the transaction of its business by any such company" should not be "included in its return and provided that the tax should not be payable more than once in respect to the same ton of coal." This statute was supported by the courts in several decisions.¹³⁵ However by an Act of June 7, 1879, the law was amended, and the rate was continued at three cents per ton until July 1, 1880; thereafter it was one cent per ton until July 1, 1881. The tax was entirely discontinued after the latter date.

The mines of the state are taxed locally upon real and personal property. An annual state tax is levied upon the capital stock of corporations, and upon corporate loans. The

principal problem in the taxation of mines in Pennsylvania has been that of valuation.¹³⁶

In 1909 the Pennsylvania legislature appointed a Joint Committee to make a report upon taxation of mines. This committee drafted a bill favoring the taxing of anthracite at the mine, but no action was taken until 1913 when an act was passed providing that anthracite should be taxed two and one-half per cent of the gross value per ton at the mine when ready for market.¹³⁷ The mining companies questioned the constitutionality of this act and the court held that the law was in violation of the constitutional provision directing that "all taxes shall be uniform upon the same class of subjects within the territorial limits of the authority levying the tax" as it makes an arbitrary distinction and discrimination between the producers of anthracite and those mining bituminous coal, the latter not being subjected to this special tax. This was the opinion of the court given in October 1915 on the Act of 1913.¹³⁸ The legislature of 1915 had revised the law and the new law had been signed by the Governor on June 1, 1915. Under the new law the tax rate is two and one-half percent as before and is levied only on anthracite, the essential difference from the old law being in the plan of collecting the tax and distributing the proceeds.^{138a}

SOUTH CAROLINA

South Carolina has never ranked as an important producer of minerals. Prior to 1912, phosphate mining was relatively of considerable importance, but recently the industry declined. In

¹³⁶*Infra*, chap. VII.

¹³⁷*Laws of Pennsylvania*, 1913, Act. 374.

¹³⁸*Commonwealth v. Alden Coal Co.*, 96 Atlantic 246.

^{138a}The correspondent of *Coal Age* writes on November 25, 1916, as follows: "So far as action on the part of the state is concerned the 1915 act is as dead a letter as the anthracite tax law of 1913, which was declared unconstitutional by the Supreme Court. The 1915 anthracite tax law was so framed, it was thought, that the faulty features of the prior law would not invalidate it. It provides the same rate of tax, and under its provisions the coal companies should have started filing their reports with the auditor general with the beginning of the present year. Attorney General Brown, however, when the time for filing of the reports arrived, notified the auditor general that he would advise him regarding the matter. This advice, it is said, has not yet been given. No reports have been filed and no attempt has been made to collect any of the tax. While the state officials interested will not say the 1915 act is as defective

1912, the value of the total mineral product was \$1,606,989 while in 1913 it was \$1,464,150 and in 1914, \$1,414,294.¹³⁹

The Constitution of 1868 provided for uniform taxation except on mines, the proceeds only of which were to be taxed.¹⁴⁰ The Constitution of 1895 made a similar limitation upon the taxation of mines.¹⁴¹

Personal property used in connection with mines and all land not actually mined is assessed and taxed as other personal property and real estate. Land actually mined is not taxed except upon the gross proceeds which are determined by the cash market value of the material mined.¹⁴²

UTAH

The Mormons entered Utah in 1847, but paid no attention to mining in the early days, although it is claimed that they soon realized the great mineral wealth of the area surrounding the fertile valleys in which they had located.¹⁴³

Utah was organized as a territory December 9, 1850. The so-called "Utah War" of 1857 brought into the district a considerable number of United States troops. Later, in 1862, a detachment of California volunteers was located at Salt Lake and these soldiers, experienced in California mining, began prospecting in the mountains near by. The first mineral discovery was reported in Bingham canyon in 1863. Other discoveries soon followed and mining became of great importance. In 1872

constitutionally as is the act of 1913, it is generally believed by lawyers that the newer act is no better from a legal standpoint than the 1913 act. So far, the coal companies have not attacked the law, and it is conceded in some quarters that they will not do so. Some of the officials at the capitol, who do not care to be quoted, as their opinion in the matter will probably be asked by the governor, are of the belief that there never will be any state tax collected on anthracite in Pennsylvania until there is a general law relating to bituminous coal, oil, and natural gas. Efforts to put through such a measure have been under way ever since Governor Tener's tax commission made numerous recommendations four years ago on means of increasing the revenues. This state, Ohio, and West Virginia have never been able to come to an understanding regarding a tax on soft coal, oil, and gas. For this reason it has been deemed not advisable to tax natural resources of western Pennsylvania which are found also in adjoining states." (*Coal Age*, 1916, X, 902).

¹⁴²*Acts of Gen. Assembly*, 1881-1882, sec. 196.

Utah enacted laws controlling locations upon mineral lands. Taxation laws were enacted in 1878.

The Constitution was adopted November 5, 1895 and Utah was admitted to the Union January 4, 1896. The taxation of the net proceeds is authorized by the Constitution.¹⁴⁴ In 1899 the assessment of the net proceeds was transferred to the State Board of Equalization by action of the state legislature. In 1905 when the question was carried to the state supreme court, it was held that, under the Constitution, the State Board of Equalization could not legally assess the net proceeds of mines. In 1908 the Constitution was amended so that "the net annual proceeds of all mines and mining claims" shall be assessed and taxed by the State Board of Equalization.¹⁴⁵

An effort was made in 1911 to revise the system of taxation in general and various constitutional amendments were proposed including one removing the provision requiring the State Board of Equalization to tax mining machinery, surface improvements, and net proceeds of mines and removing the restriction that claims and land shall be taxed at the price paid the United States for the land.

All of these amendments were defeated.¹⁴⁶

The details of the law now in effect in Utah are given in Chapter IV. The State Board of Equalization recommended in 1912 that the law taxing the net proceeds of mines be made more specific and that taxes and insurance be legally deductible from the net proceeds. The Attorney-General also pointed out defects in the law and urged that the proposed amendment be resubmitted.¹⁴⁷

According to the report of the State Board of Equalization the important points of difference between the mining companies and the State Board of Equalization have been adjusted and the lawsuits which resulted from controversies¹⁴⁸ over the

¹⁴⁸In a suit by the Utah Copper Co. to recover an excess of taxes levied by the Board of Equalization and collected by the county treasurer, the Judge in the U. S. District Court instructed the jury to find for the mining company, the amount decreed to be returned, amounting to

interpretation of the law have determined judicially the various points at issue. "So long as the law makers of the State shall consider that the assessment of the net proceeds of a mine fairly represents its value for assessment purposes, a fair and uniform assessment may be had under the present law."¹⁴⁹ Additional data on mine taxation in Utah may be found in the references given below.¹⁵⁰

On November 7, 1916 there was submitted to the voters of Utah for their approval an amendment to the Constitution, being a proposed change of Article XIII which relates to taxation and revenue. The most important part of the proposed amendment follows: "In addition to the assessment of the surface grounds, improvements and machinery of mines and mining claims, all mines and mining claims producing net proceeds shall be taxed at a value not to exceed three times such net products." This amendment was defeated at the polls.

VIRGINIA

Virginia does not rank high as a producer of minerals, the value of the output having been \$14,995,842 in 1912, \$17,178,580 in 1913, and \$16,400,347 in 1914.¹⁵¹

The general property tax has been employed in the taxation of mines and the assessing of mines and mineral lands under special rules is authorized by the Constitution.¹⁵² The legislature by an Act amended in 1910 has prescribed how the \$29,444. The point at issue was the allowance of expenditures in the development of mining properties and the providing of facilities for the handling and reducing of the ores. The company held that these expenditures were properly to be deducted from the gross revenue, before the net profits could be established. *Engineering and Mining Journal*, 1913, XCV, 1119.

¹⁵²Constitution of 1902, Art. XIII, sec. 172.

appraisal shall be made.¹⁵³ The assessment was formerly made every five years by the general assessors; now an annual appraisal is made by the commissioner of revenues in the district where the property is located, with the assistance of a special assessor appointed by the Corporation Commission.¹⁵⁴ As a result a higher valuation of mineral land has resulted. In 1906, the 956,155 acres of mineral land then assessed bore an assessment of \$8.13 per acre; in 1911, the acreage was 2,438,887 which was rated at \$11.51 per acre. This was an increase of 42 percent which may be compared with an increase in valuation of 28 percent for farm lands.¹⁵⁵

The experience of Virginia may well be expressed by the statement of the Joint Committee on Tax Revision reporting to the Governor of Virginia, November 1, 1914, in accordance with instructions of the legislature of 1914, as follows:

“Under our general property tax system, the mineral when produced pays on an assessment greater than its value and the undeveloped land out of all proportion to its productive value. Any other system should obviously take no more tax from the mineral, and would necessarily give up all or nearly all the tax upon undeveloped land. Nevertheless, the counties and even the Commonwealth can not forego some assessment against these lands.”¹⁵⁶

WEST VIRGINIA

West Virginia is an important producer of minerals, ranking second among the states in the value of the mineral output. The principal mineral products are coal, petroleum, and natural gas. In 1912 the output was valued at \$123,847,812, in 1913 at \$143,640,633, and in 1914 at \$134,071,803.¹⁵⁷

The Constitution provides that “taxation shall be equal and uniform throughout the state, and all property, both real and personal, shall be taxed in proportion to its value.”¹⁵⁸

The essential features of the laws now in force are that real property is assessed locally at its actual value; personal property, including machinery and stored minerals, is assessed at its actual value; leaseholds in coal, oil, gas, or other mineral

¹⁵⁸Art. X, sec. 1.

substances are assessed at their actual value; mineral rights when owned separate from the surface are assessed at actual value to their owner. When land increases or diminishes as much as \$100 on account of the development or exhaustion of minerals, a corresponding change is made in the assessed valuation.¹⁵⁹

The Tax Commission of 1902, appointed to investigate the tax system of the State, reported to the legislature recommending that a production tax be levied amounting to one-third of a cent per ton on each ton of coal manufactured or produced, the proceeds of this tax to be used for State purposes alone.¹⁶⁰

The attempts made during the session of the legislature in 1903 to enact such a tax on production failed. Again in 1907 the State Tax Commissioner recommended¹⁶¹ to the legislature that a production tax be employed by the State. No action was taken. The reasons assigned by the Tax Commission¹⁶² for the proposed imposition of the production tax were as follows:

"FIRST: The nature of this business is such, that the State has felt called upon to incur a very considerable annual expense, in order that the business may be carried on with profit to the operators, and with comparative safety to the miners. To this end a law has been passed in the interest of this business. Nine inspectors were appointed, and salaries and expenses are paid by the State.

"SECOND: Three Miners' Hospitals have been established, and buildings erected in mining districts of the State, primarily for the purpose of caring for, and treating persons, principally miners, who may be injured in and about the operations of the mines. The expense of maintaining these hospitals is very considerable every year.

"THIRD: The State at very considerable expense maintains its militia or national guard. It may be said that in almost every case where it is found necessary to call out this guard for the preservation of the domestic peace and for the protection of property, it is owing to disturbances in the mining regions of the States, growing out of difficulties or disputes between the operators of the mines and those in their employ.

"FOURTH: Investigation shows that the criminal charges are much larger in counties where large mining operations are carried

¹⁵⁹*Code of 1906*, Sec. 723, 687, 688, 794.

¹⁶⁰Townsend, T. C. Taxation of coal, oil, and gas. *Proceedings National Tax Association*, 1908, II, 395.

¹⁶¹*Ibid.*, p. 398.

¹⁶²*Second Biennial Report, West Virginia Tax Commission*, 1907-8, p. 32.

on, than in other counties. This results, it is believed, from the large influx into such counties of men to work in the mines.

"FIFTH: It will be admitted, that miners and others employed about the mines, pay but little tax, either into the State, or county treasury; and that very often the operators or owners of the mines reside in other states, and pay little or no taxes in this State. The number of children in mining communities is generally large in proportion to the population. For work in the mines, large numbers of laborers, many of them illiterate, are brought in by the operators, and the burden of educating the young is thrown upon the State, and the community. The operators and owners of the mines have a special interest in the education of these young people, and being responsible for their being in the State, it is thought not unjust, partly in consideration of this fact, that the small tax should be paid."

In 1905 the legislature enacted the law taxing leaseholds. This law was held to be constitutional.¹⁶³

The Tax Commission of 1902 endeavored to procure legislation providing for a production tax of one-half cent per barrel of oil, but without success. The difficulty of appraising an oil or gas property is apparent and in the opinion of the West Virginia Tax Commission a production tax is the "most feasible, scientific, and common-sense method" that can be devised.¹⁶⁴

On the contrary Governor Hatfield went on record¹⁶⁵ in a special message to the legislature, February 18, 1915, as not advocating a production tax on coal, oil, and gas.¹⁶⁶

WISCONSIN

Mineral lands and mines of Wisconsin have been subject to taxation only under the general property tax and the income from mines has been taxable as other income under the income tax. The principal problem has been that of valuation and appraisal for the purpose of taxation.

Lead ore was discovered in Wisconsin as early as 1682,¹⁶⁷ but lead mining was not begun actively on a substantial basis until Congress authorized¹⁶⁸ the sale of the lead lands of the Mississippi Valley in 1847. Iron ore was discovered in the Menominee Range in 1873, on the Gogebic Range in 1883, and on the Baraboo Range in 1900. Wisconsin was admitted to the Union May 27, 1848 and adopted the system of taxing all property upon the ad valorem basis. Broken minerals were taxed as personal property.¹⁶⁹

The law in effect now is in no important detail different from the law under which mines have been taxed since the state was organized, but the laws regarding the assessment and valuation have been made more specific.¹⁷⁰ In 1903 a law was enacted providing for the taxation of mineral rights.¹⁷¹

In 1897 a State Tax Commission was established¹⁷² and there has been since that date a reorganization and development of the taxing system of the State, with a tendency toward centralization.¹⁷³ The first assessment of mines for the Tax Commission was made in 1912. In 1914 this work was regularly authorized by law and it is now done by the State Geologist. The appraiser for the Tax Commission has the right to make a reassessment of any property apparently not fairly appraised. The local taxing units do not always use the valuation of the Geological Survey.

Royalties are taxed under the income tax.¹⁷⁴ At the present time there is no sentiment in Wisconsin in favor of a state tonnage tax. In 1912 the mineral output of Wisconsin was

valued at \$14,192,287, in 1913 at \$12,452,480, and in 1914 at \$11,022,643,¹⁷⁵ practically 25 percent of the value being in zinc. In 1914 the mining corporations paid income tax upon a taxable income amounting to \$326,880. The average rate was .05452 and the total tax paid was \$17,820.47.¹⁷⁶ In 1915 a law was enacted specifying that lead and zinc mines shall be assessed annually at one-fifth of the market value of the ore mined during the preceding calendar year.¹⁷⁷

WYOMING

Wyoming has extensive deposits of coal, as well as other mineral resources of value, although the state has never ranked high among the mineral producers. In 1912 the value of the output was \$13,374,088, in 1913 it was \$13,682,091, and in 1914, \$12,417,752, the coal product representing nearly 90 percent of the total.¹⁷⁸

The Territory of Wyoming was organized July 25, 1868, and the state enacted laws for the location of mining claims December 16, 1870. In 1890 Wyoming was admitted to the Union and adopted a constitution which permitted the taxation of mines upon the gross production in lieu of taxes upon lands. Surface improvements of all mining property are taxed.¹⁷⁹ All coal lands from which coal is not being mined are assessed and taxed according to their value.¹⁸⁰

The legislature of 1903 provided for the taxation of mines and mineral lands upon the gross product¹⁸¹ as permitted by the constitution.

In 1909 the office of Commissioner of Taxation was created and the duty of appraising the value of the gross products of mines was assigned to him.¹⁸² The Report of the Commissioner

¹⁷⁹Constitution, Art. XV, sec. 3.

¹⁸⁰*Ibid.*, sec. 2.

¹⁸¹*Laws of Wyoming*, 1903, chap. 81, sec. 1 to 6.

¹⁸²*Ibid.*, 1909, chap. 66. "The present method of the assessment of output of mines is unsatisfactory, and the law indefinite and conflicting. The present law should be so amended that there can be no question as to what shall be assessed and as to how it shall be assessed and the authority of the assessing board plainly and clearly set forth." *First Biennial Report of Commissioner of Taxation*, 1909-10, p. 19.

of Taxation for 1911-1912 shows¹⁸³ that the taxes on the output of mines amounted to \$38,894.51 in 1910; \$53,111.26 in 1911; and \$47,734.35 in 1912.¹⁸⁴

¹⁸³*Ibid.*, p. 68.

¹⁸⁴The value of the output in 1912 as reported by the United States Geological Survey was \$13,374,088. The lowest rate applied in any of the mining counties was 7.47; at this rate the tax paid should have been \$99,904.44.

CHAPTER IV

CONSTITUTIONAL AND STATUTORY ENACTMENTS

Constitutional Limitations

An examination of the constitutions of the states shows that no restraint has been placed upon the classification of property for taxation in Connecticut, Maryland, Minnesota, New Jersey, New York, Oklahoma, Pennsylvania, Rhode Island, and Vermont.¹

Uniformity of taxation on all property in the same class is specified by the constitutions of Arizona, Colorado, Delaware, Idaho, Illinois, Maryland, Missouri, Nebraska, New Mexico, Oklahoma, Pennsylvania, Virginia, and Wyoming.

The following states require uniform taxes on all classes of property: Alabama, Arkansas, California, Florida, Indiana, Kansas, Kentucky, Louisiana, Massachusetts, Michigan (except that specific taxes are authorized), Minnesota, Mississippi, Missouri, Montana (except as specified), Nebraska, Nevada (except mines), New Jersey, North Carolina, North Dakota, Ohio, Oregon, South Carolina, South Dakota, Tennessee, Texas, Utah (except mines), Washington, West Virginia, Wisconsin, and Wyoming.

The method of taxing mines is prescribed in the constitutions of Montana, Nevada, South Carolina, Utah, and Wyoming.

The legislatures of Michigan and Oklahoma are authorized by the constitution to levy and collect specific taxes. The legislature of Louisiana may impose license taxes upon the business of mining.

The constitutions of thirty-two states practically require a uniform method of valuing property for taxation.² The constitution of Virginia authorizes special and separate assessment of mineral lands. Unproductive coal land in Wyoming must be listed and taxed as provided in the constitution.

Most of the state constitutions specify that taxes shall be uniform and that all property, except as enumerated, shall be

¹*Proceedings National Tax Association*, 1911, V, 451.

²*Ibid.*, 1911, V, 451.

subject to taxation. The constitution of Idaho prescribes that taxes shall be uniform upon the same class of subjects, "provided the legislature may allow such exemptions from time to time as shall seem necessary and just."³

Certain of the Eastern states have no constitutional requirement that all property shall be taxed. The statutes of Vermont, in the absence of specific constitutional restrictions on exemptions, authorize municipalities to exempt mines from taxation for a period of ten years.⁴ In general, however, the present day tendency is rather to select mines as a special object for heavier taxation than to exempt them.

Specific reference to mines is made in the constitutions of the following states: Louisiana,⁵ Montana,⁶ Nevada,⁷ Ohio,⁸ Oklahoma,⁹ South Carolina,¹⁰ Utah,¹¹ Virginia,¹² and Wyoming.¹³

From time to time the legislatures of the various states have enacted laws providing for the taxation of mines, which laws have been held by the courts to be in conflict with the Federal or the State Constitution. Among the most important of the laws that have been held unconstitutional are the following:

In 1867, the Nevada law taxing proceeds of mines was declared unconstitutional.¹⁴

The Pennsylvania Act of 1864, levying a tax of two cents a ton on the product of mines, quarries, and clay-beds was held unconstitutional in 1872.¹⁵

Similarly, the tax collected of railroads in Maryland on the tonnage of coal handled was held unconstitutional in 1874.¹⁶

In 1885, the Michigan Supreme Court declared unconstitutional the law imposing a tax which discriminated between ore

smelted in the State and that shipped to smelters outside the state as being in restraint of interstate commerce.¹⁷

The Minnesota tonnage tax law of 1881 was declared unconstitutional in 1896.¹⁸

The Utah Act of 1899, placing the assessing of the net proceeds of mines with the State Board of Equalization instead of the county assessor was held to be unconstitutional in 1905.

A Louisiana Act of 1910 providing for a conservation fund and authorizing an annual license tax upon those engaged in the mining business was declared unconstitutional as the measure had been enacted by the legislature before the amendment to the Constitution, providing for such legislation, had been voted upon by the people of the state.¹⁹

The special tax on anthracite levied by the Pennsylvania Assembly in 1913 was declared unconstitutional in 1915.²⁰

Statutory Provisions

The following state legislatures in providing laws defining property have specified mines and minerals:

Alabama, Arkansas, California, Colorado, Connecticut, Idaho, Illinois, Indiana, Kansas, Minnesota, Montana, Nebraska, New Mexico, New York, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, West Virginia, and Wisconsin.

The following note specifically that mining rights shall be taxed to the owner if the title is separate from the surface: Alabama, Arkansas, Georgia, Illinois, Indiana, Kansas, Kentucky, Minnesota, New Hampshire, New Mexico, North Carolina, North Dakota, Ohio, Vermont, Virginia, West Virginia, and Wisconsin.

There is special legislation on the methods of taxing mines in the following states: Colorado, Idaho, Louisiana, Montana, Nevada, New Mexico, Oklahoma, Pennsylvania, South Carolina, Utah, Wisconsin, and Wyoming.

Rules for assessing and listing mining property are specified in the laws of Colorado, Connecticut, Idaho, Michigan, Minnesota, Montana, Nevada, New Mexico, North Dakota, Ohio, Oklahoma, South Carolina, Utah, Vermont, Virginia, West Virginia, Wisconsin, and Wyoming.

²⁰Commonwealth v. Alden Coal Co., 96 Atlantic 246, (1915).

The conditions under which mining property may be exempt from taxation are given in the laws of Alabama, Maine, New Hampshire, and Vermont.

Constitutional and Statutory Provisions by States

No attempt has been made to assemble all the constitutional provisions and statutory enactments that apply to the taxation of mining property as well as to other property, but rather to present those that are of particular importance in the study of the taxation of mining property.

ALABAMA

Constitutional Provisions

Uniformity. All taxes levied on property shall be assessed in exact proportion to the value of the property. (Art. XI, sec. 211).

The property of private corporations, associations, and individuals shall forever be taxed at the same rate. (Art. XI, sec. 217).

Franchise tax. The legislature shall provide for the payment of a franchise tax by corporations organized under the laws of Alabama, which shall be in proportion to the amount of capital stock. (Art. XIV, sec. 229). The legislature shall provide for the payment of a franchise tax by foreign corporations, the tax being based on the actual amount of capital employed in the state. (Art. XIV, sec. 232).

Statutory Provisions

Mines assessed. Real and personal property estimated at its full cash value by assessor upon information, inspection, or otherwise taking into consideration mines, minerals, quarries, or coal-beds and the amount and character of improvements. (*Code of Alabama*, 1907, chap. 45, sec. 2112).

Mineral rights assessed. Mineral interests when they have been severed from the soil by sale or otherwise, shall be separately assessed. (*Ibid.*, sec. 2112). Every separate or special interest in any land, such as mineral, when such interest is owned by a person other than the owner of the soil, shall be assessed. (*Ibid.*, chap. 45, sec. 2082).

Franchise tax. All domestic mining corporations pay annually a privilege tax varying from \$10. on paid-up capital

stock under \$10,000, to \$500 on paid-up capital over \$1,000,000. *Ibid.*, chap. 45, sec. 2361). Foreign mining corporations pay a franchise tax on capital employed in the state at the following rate, 25 percent on the first \$100, 5 percent on the remainder of the first \$1000 and then 1/10 percent on the remainder. (*Ibid.*, chap. 45, sec. 2491). In addition to the state tax, foreign companies pay a county tax equal to one-half the state tax.

Corporation tax. Shares of mining companies are assessed and taxes collected in the county where the company has its home office. The corporation property is assessed against the corporation; the shares are assessed in the name of the shareholder at their actual market value of the real and personal property of the corporation. The corporation pays for the shareholders, respectively, the tax assessed against the shares. (*Ibid.*, chap. 45, sec. 2082).

Exemptions. Pig iron remaining in the hands of the manufacturers on the first day of October of any year following immediately that in which it was produced is exempt from taxation. (*Ibid.*, chap. 45, sec. 2061).

ARIZONA

Constitutional Provisions

Uniformity. All taxes shall be uniform upon the same class of property. (Constitution, Art. IX, sec. 1).

All property not exempt shall be subject to taxation. (*Ibid.*, Art. IX, sec. 2).

Assessing. The manner, method, and mode of assessing, equalizing, and levying taxes shall be such as may be prescribed by law. *Ibid.*, Art. IX, sec. 11).

Production taxes. The legislature may provide for the levy and collection of production taxes. (*Ibid.*, Art. IX, sec. 12).

Statutory Provisions

Property. All property of every kind shall be subject to taxation but double taxation is not permitted. (*Revised Statutes*, 1913, Title 49, chap. IV, sec. 4846). Real estate includes ownership of, or claim to, or possession of, or right to possession to, any land or patented mine within the state. (*Ibid.*, sec. 4847). "Personal property" includes any interest or equity in or valid claim to non-patented claims, either lode or placer. (*Ibid.*, sec. 4847).

Assessing. Real estate and improvements shall be assessed

separately. (*Ibid.*, sec. 4847). All taxable property must be assessed at its full cash value. (*Ibid.*, sec. 4849).

Corporations. An annual registration fee of \$15 is charged for state purposes. (*Ibid.*, sec. 2274).

ARKANSAS

Constitutional Provisions

Property. All property subject to taxation shall be taxed according to its value. (Constitution, Art. XVI, sec. 5).

Uniform assessment. The general assembly shall provide by law for the assessment of property according to its value, so that the assessment shall be equal and uniform throughout the State. (*Ibid.*, sec. 5).

Statutory Provisions

Property. The term "real property and lands" includes not only the land itself, but also all improvements, and all rights and privileges belonging thereto. (*Statutes of Arkansas*, 1904, chap. 137, sec. 6872). All property, real and personal, shall be subject to taxation. (*Ibid.*, sec. 6873).

Capital-stock tax. All corporations pay to the State for State purposes a tax, levied on the right to exist as a corporation, at the rate of one-fifteenth of one percent on the outstanding capital stock employed in the State. (*Laws of Arkansas*, 1913, Act 122, p. 518).

CALIFORNIA

Constitutional Provisions

Uniformity. All property shall be taxed in proportion to its value, to be ascertained as provided by law, or as hereinafter provided. Constitution of California, Art. XIII, sec. 1).

Exemptions. The power of taxation shall never be surrendered or suspended by any grant or contract. (*Ibid.*, Art. XIII, sec. 6).

Incomes. Incomes may be taxed as prescribed by law. (*Ibid.*, Art. XIII, sec. 11).

Franchises. All franchises, other than those expressly provided for in this section, shall be assessed at their actual cash value, in the manner to be provided by law, and shall be taxed at the rate of one per cent each year, and the taxes collected thereon shall be exclusively for the benefit of the state. The rates of taxation shall remain in force until changed by the legislature, two-thirds of all the members of each of the two

houses voting in favor thereof. (*Ibid.*, sec. 14. The rate in this section was changed by the legislature in 1913 and in 1915).

Statutory Provisions

Uniformity. All property, not exempt, is subject to taxation, but nothing in the code shall be construed to require or permit double taxation. (*Code of California*, Title IX, chap., sec. 3607).

Assessment. All taxable property must be assessed at its full cash value. (*Ibid.*, Title IX, chap. III, sec. 3627).

Mining property. The term "real estate" includes: All mines, minerals and quarries in and under the land and all rights and privileges appertaining thereto. (*Ibid.*, Title IX, chap. II, sec. 3617).

Corporation taxes. Every corporation doing intrastate business within the state of California shall procure annually from the secretary of state a license authorizing the transaction of such business and shall pay therefor a license tax. This tax shall be graduated according to the authorized amount of capital stock. When the authorized capital stock does not exceed ten thousand dollars, the tax shall be ten dollars; when the authorized capital stock exceeds ten million dollars the tax shall be one thousand dollars. All corporations having no capital stock shall pay an annual tax of ten dollars. (*Laws of California*, 1915, chap. 190).

Shares of stock of domestic corporations shall be exempt from taxation. All property belonging to corporations shall be taxed as is other property. (*Code of California*, Title IX, chap. I, sec. 3608).

Corporations shall pay to the state for state purposes a tax on the actual cash value of their franchises.

COLORADO

Constitutional Provisions

Uniformity. "All taxes shall be uniform upon the same class of subjects within the territorial limits of the authority levying the tax, and shall be levied and collected under general laws, which shall prescribe such regulations as shall secure a just valuation for taxation of all property, real and personal." (Constitution of Colorado, Art. X, sec. 3).

Exemptions. All laws exempting from taxation property other than hereinbefore mentioned shall be void. (*Ibid.*, Art. X, sec. 9).

Statutory Provisions

Assessing property in general. All taxable property shall be listed and valued each year, and shall be assessed at its full cash value. (*Revised Statutes*, 1908, sec. 5529). In assessing property, except as provided, the market value shall be the guide. (*Ibid.*, sec. 5591).

Mining property. Real estate includes all lands, all mines, minerals and quarries in and under the land, and all rights and privileges appertaining thereto, and improvements. (*Ibid.*, sec. 5540). The possessory right to unpatented and non-producing mines is subject to assessment. (*Laws of Colorado*, 1915, chap. 138). All mines and mining claims bearing "gold, silver, lead, copper, and other precious metals or valuable minerals, and possessory rights therein" are divided into two classes,—producing and non-producing. Those having a gross annual output of less than five thousand dollars are classed as non-producing, all others as producing. (*Revised Statutes*, 1908, sec. 5618). Producing mines of coal, iron, asphaltum and quarries are assessed in the same manner as other property. (*Ibid.*, sec. 5625).

All producing metal mines or possessory rights therein are valued for taxation at one-fourth of their gross production unless their net output exceeds one-fourth in which case the net is taken. (*Laws of Colorado*, 1915, chap. 138). The net proceeds shall be determined by deducting from the gross value of the ore produced, the actual cost of extracting from the mine, not including the salaries of officers not actively and consecutively engaged; the actual cost of transportation to the place of reduction or sale; and the actual cost of treatment, reduction or sale. (*Laws of Colorado*, 1915, chap. 138).

The surface improvements of all mines are taxable as is other property. (*Revised Statutes*, 1908, sec. 5621).

Any number of contiguous claims owned or operated as one property by the same person, persons, association or corporation, the gross production of which shall be more than \$5000 per annum, shall be deemed and considered one producing mine for the purposes of taxation. (*Laws of Colorado*, 1915, chap. 138).

Corporations. Domestic corporations pay for state purposes a tax of two cents upon each one thousand dollars of authorized capital stock. (*Revised Statutes*, 1908, sec. 5595).

Foreign corporations, in addition to other taxes, shall pay a license fee of two cents upon each one thousand dollars capital stock, represented by its property and assets in the State. (*Laws of Colorado*, 1911, chap. 260).

CONNECTICUT

Constitutional Provisions

Nothing specific on mines and nothing on taxation.

Statutory Provisions

Uniformity. All property not exempted shall be taxed. (*Public Acts*, 1909, chap. 97, p. 1024).

Mining property. Quarries, mines, and ore beds shall be liable to taxation. Whether owned in fee or leased, they shall be set in the list separately at their present true and actual valuations and, if owned by a corporation, the whole stock property and franchise shall be set in the list of the town where such quarry, mine or ore bed is. (*Ibid.*, p. 1024).

Corporation license. Shares of stock in mining and oil companies may not be sold until a financial statement is filed with the Secretary of State. A fee of twenty-five dollars is required. This applies to both foreign and domestic companies; however, companies operating wholly within the State are exempt. (*Ibid.*, 1911, chap. 232).

DELAWARE

Constitutional Provisions

Uniformity. All taxes shall be uniform upon the same class of subjects. (Constitution, Art. VIII, sec. 1).

Exemptions. The general assembly may by general laws exempt from taxation such property as in the opinion of the general assembly will best promote public welfare. (*Ibid.*, sec. 1).

Statutory Provisions

Franchise tax. An annual franchise tax is levied upon corporations, the tax varying from \$5 on a capitalization of \$25,000 to \$50 on \$1,000,000 with an addition of \$25 for each additional million dollars or part thereof. (*Laws of Delaware*, 1915, chap. 6, sec. 105). Mining corporations, fifty percent of whose capital stock actually paid in is invested in business carried on within the state, and which is subject to a license tax for carrying on such business, are exempt from this tax. Mining companies not

having fifty percent so invested but having a part of the capital stock invested in the state, are entitled to a deduction of the value of the real and personal property used in mining in the state, from the amount of the capital stock issued and outstanding.

Property tax. There is no state levy on general property. All real property, not exempt, is subject to taxation by the local units. Real and personal property are to be assessed at their true value. (*Revised Code*, chap. X, sec. 11).

FLORIDA

Constitutional Provisions

Uniformity. The legislature shall provide for a uniform and equal rate of taxation. Constitution, Art. IX, sec. 1).

Assessment. The legislature shall prescribe such regulations as shall secure a just valuation of all property, both real and personal. (*Ibid.*, sec. 1).

Statutory Provisions

Property tax. All real and personal property not exempt shall be subject to taxation. (*Laws of Florida*, 1906, sec. 428).

Phosphate license. Owners and operators of phosphate plants in operation shall pay twenty-five dollars for every plant in operation. (*Ibid.*, sec. 453).

GEORGIA

Constitutional Provisions

Uniformity. All taxation shall be uniform on the same class of subjects and ad valorem on all property subject to be taxed within the territorial limits of the authority levying the tax. (Constitution, Art. VII, sec. 2).

Statutory Provisions

Property tax. Taxes are levied on the ad valorem value of property. (*Code of Georgia*, 1910, sec. 914).

Uniformity. All taxation shall be uniform upon the same class of subjects and ad valorem on all property subject to be taxed. (*Ibid.*, sec. 6553).

Exemptions. All exemptions, other than those enumerated, shall be void. (*Ibid.*, sec. 6556).

All real and personal property, whether owned by individuals or corporations, is liable to taxation. (*Ibid.*, sec. 1002).

Mining rights. All persons owning any mineral interests less than the fee shall return the same for taxation and pay the same as on other property. (*Ibid.*, sec. 1008).

License. Each company doing business in the State shall pay ten dollars a year. (*Ibid.*, sec. 919). All corporations incorporated under the laws of Georgia shall, in addition to all other taxes now required by law, pay each year an annual license or occupation tax as follows: Capital up to \$10,000, the sum of \$5; from \$10,000 to \$25,000, the sum of \$10; the rate increases up to \$100 on a capitalization in excess of one million dollars. All foreign corporations doing business in the State pay a similar tax. (*Ibid.*, sec. 950 and 951).

IDAHO

Constitutional Provisions

Uniformity. Taxes shall be uniform upon the same class of subjects within the same jurisdiction, provided the legislature may allow such exemptions from time to time as shall seem necessary and just. Duplicate taxation of property for the same purpose is prohibited. (Constitution, Art. VII, sec. 5).

Corporations. The power to tax corporations or corporate property shall never be relinquished or suspended. (*Ibid.*, sec. 8).

Statutory Provisions

Property tax. Real property includes lands, improvements, fossils, and quarries in and under the land. (*Laws of Idaho*, 1913, chap. 58, sec. 6). Personal property includes equities and easements. (*Ibid.*, chap. 58, sec. 7). Mining companies pay locally taxes for state and local purposes on land, improvements, and machinery. (*Revised Code*, 1908, sec. 1863).

Assessing property. Mining claims not patented are exempt from taxation. (*Laws of Idaho*, 1913, chap. 58, sec. 4). All mines and mining claims, both placer and rock in place, containing or bearing gold, silver, copper, lead, coal, or other valuable mineral or metal deposits, after purchase thereof from the United States, shall be taxed at the price paid the United States therefor, unless the surface ground, or some part thereof is used for other than mining purposes. That part of the ground used for other purposes shall be taxed at its value for such other purposes. (*Revised Code*, 1908, sec. 1863). Machinery and improvements on mines and mining claims are not exempt. (*Ibid.*, sec. 1863).

Net profits. In addition to property taxes on surface and improvements, all mines, patented and unpatented, pay a tax on net profits. (*Ibid.*, sec. 1863). To determine the "net profits", deductions are made from the gross receipts as follows:

The actual expenditure of money and labor in extracting the product from the mine, of transporting it to the mill, concentrator, or reduction works, and the conversion of the same into money or its equivalent, and also the deduction of all moneys expended for necessary labor, machinery and supplies needed and used in the mining operations, for the improvements necessary in and about the mine or claim, for reducing ores, for the construction of the mills and reduction works used and operated in connection with the mine or claim, for transporting the ore, and for extracting the metals and minerals therefrom; but the money invested in the mine, or improvements made during any year, except the year immediately preceding, must not be included. Such expenditures do not include the salaries or any portion thereof, of any person or officer not actually engaged in the working of the mine, or personally superintending the management. (*Ibid.*, sec. 1864).

Every person or corporation engaged in mining is required to file with the county assessor an annual statement, under oath, of net profits. (*Ibid.*, sec. 1865).

License tax. All mining companies owning productive mines, pay to the State a graduated (from \$10 on \$5,000 or less capitalization to \$150 for over \$2,000,000) license tax. (*Laws of Idaho*, 1912, chap. 6). Non-productive mining corporations are exempt.

ILLINOIS

Constitutional Provisions

Uniformity. Every person and corporation shall pay a tax in proportion to the value of property owned. (Constitution, Art. IX, sec. 1).

Franchises. The legislature shall have power to tax persons or corporations owning or using franchises and privileges in such manner as it shall from time to time direct by general law, uniform as to the class upon which it operates. (*Ibid.*, Art. IX, sec. 1).

Exemption. Exemption from taxation shall be by general law only. (*Ibid.*, Art. IX, sec. 3).

Personal property. "From and after the date when this section shall be in force the powers of the General Assembly over the subject matter of the taxation of personal property shall be as complete and unrestricted as they would be if sections one, three, nine, and ten of this article of the constitution did not exist; provided, however, that any tax levied upon personal property of the same class within the jurisdiction of the body imposing the same, and all exemptions from taxation shall be by general law, and shall be revocable by the General Assembly at any time." (*Ibid.*, Art. IX, sec. 14. Adopted November 7, 1916).

Statutory Provisions

Property tax. In valuing any real property in which there is a coal, or other mine or stone or other quarry, the same shall be valued at such a price as such property, including the mine or quarry, would sell at a fair, voluntary sale for cash. (*Revised Statutes*, chap. 120, sec. 4).

Any mining right or the right to dig for or to obtain iron, lead, coal, or other mineral from land, when separated from the title to the surface, shall be taxable separately. (*Ibid.*, chap. 94, sec. 6 and 7).

Capital stock tax. Domestic corporations are subject to assessment on the excess value of capital stock over tangible property. The value of the capital stock is based on a consideration of the market value of the shares or on the value as reported to the State by the corporations, and on such other information as may be obtained. To the total value of the shares is added the bonded and other indebtedness except that incurred for current expenses. The equalized tangible value is deducted from this amount and one-third of the remainder is taxed for state and local purposes as is other property. (*Revised Statutes*, chap. 120).

INDIANA

Constitutional Provisions

Uniformity. The General Assembly shall provide for a uniform and equal rate of assessment and taxation of all property, both real and personal, excepting such only as shall be exempt by law. (Constitution, Art. X, sec. 193).

Statutory Provisions

Property tax. In valuing any real property on which there is a coal or other mine, or stone or other quarry, the same

if the land and the mine or quarry are owned by the same person, shall be valued at its true cash value. If the mine or quarry is owned or leased by a person other than the owner of the land, such mine or quarry and all improvements and leasehold and appurtenances shall be valued separately from the land according to the true cash value. (*Revised Statutes*, 1908, sec. 10259).

Capital stock excess. Every mining company must file annually a sworn statement of the amount of its capital stock. In all cases where the market value of the capital stock exceeds the value of the tangible property listed for valuation, then such excess value shall be subject to taxation. (*Ibid.*, sec. 10233, 10234).

IOWA

Constitutional Provisions

Uniformity. The general assembly shall not grant to any citizen or class of citizens, privileges or immunities, which upon the same term shall not equally belong to all citizens. (Constitution, Art. I, sec. 6).

Corporations. The property of all corporations for pecuniary profit shall be subject to taxation the same as that of individuals. (*Ibid.*, Art VIII, sec. 2).

Statutory Provisions

Assessing. All property subject to taxation shall be valued at its actual value, and shall be assessed at 25 percent of its actual value. (*Code of Iowa*, 1897, sec. 1305).

KANSAS

Constitutional Provisions

Uniformity. The legislature shall provide for a uniform and equal rate of assessment and taxation. (Constitution, Art. XI, sec. 202).

Statutory Provisions

Property tax. All property, real and personal, not expressly exempt, shall be subject to taxation. (*General Statutes*, 1909, sec. 9214).

Real estate includes not only the land but buildings, improvements, mines, minerals, quarries, mineral springs and wells, and rights and privileges appertaining thereto. (*Ibid.*, sec. 9215).

Where the fee to the surface of any tract or lot of land is in any person or persons, natural or artificial, and the right or title to any minerals therein is in another or in others, the rights to such minerals shall be valued and listed separately and the land and said right to the minerals shall be separately taxed to the respective owners. (*Ibid.*, sec. 9334). Reserves or leases not recorded in ninety days shall be void. (*Ibid.*, sec. 9334).

Assessing. The assessor, from actual view, from consultation with the owners or agent thereof and from such other sources of information as are within his reach shall determine the true value of the property in money. (*Ibid.*, sec. 9322).

Capital stock. Capital stock, undivided profits, and all other assets of corporations are subject to taxation as personalty. (*Ibid.*, sec. 9215).

KENTUCKY

Constitutional Provisions

Uniformity. Taxes shall be uniform upon all property of the same class subject to taxation within the territorial limits of the authority levying the tax. (Amendment adopted November 2, 1915).

The General Assembly shall have power to divide property into classes and to determine what class or classes of property shall be subject to local taxation. (Amendment adopted November 2, 1915).

Assessing. Property shall be assessed at its fair cash value. (Constitution, sec. 172).

Exemptions. The power to tax shall not be surrendered by grant or contract. (*Ibid.*, sec. 175).

Statutory Provisions

Property tax. All property shall be subject to taxation and shall be assessed at its fair cash value. (Code of Kentucky, 1909, sec. 4020).

Real estate includes all lands and improvements thereon. (*Ibid.*, sec. 4022). Mineral rights or coal, oil, or gas privileges by lease or otherwise or any interest therein in Kentucky, other than the county in which said owners reside, or if they should reside out of the State, shall be listed for taxation personally in the county where situated. (*Ibid.*, sec. 4039).

License tax. An annual state license tax is imposed upon corporations amounting to 30 cents on each \$1000 of that part

of their authorized capital stock represented by property owned in the State. (*Ibid.*, sec. 4189 a—i).

LOUISIANA

Constitutional Provisions

Uniformity. Taxation shall be equal and uniform on all property in the same taxing district. (Constitution, Art. 225).

License tax. The General Assembly may levy license taxes. Those engaged in the business of severing natural resources, such as minerals and timber from the soil whether they thereafter convert them by manufacturing or not, may also be rendered liable to a license tax, but in this case the amount to be collected may either be graduated or fixed according to the quantity or value of the product at the place where it is severed. (Constitution of 1913, Art. 229). No political corporation shall impose a greater license tax than is imposed by the General Assembly for State purposes.

Statutory Provisions

Property tax. The term "property" includes all real estate, improvements, rights, personal property and shares of stock. (*Laws of Louisiana*, 1898, Act 170, p. 346). All property shall be valued at actual cash value. (*Ibid.*, p. 346).

License tax. Each person or association of persons, firms, or corporations pursuing the business of severing natural products, including all forms of timber, turpentine, and minerals including oil, gas, sulphur and salt from the soil shall pay an annual license tax amounting to one-half of one percent of the gross value of the total production, less the royalty interest accruing to the owner. The value of all products shall be computed at the place where they are taken from the soil. (*Ibid.*, 1912, Act 209, sec. 1 and 2).

A similar license tax may be imposed by the Police Juries of the several parishes, provided the amount of the license tax shall not exceed the amount, which is, or may be, similarly levied by the State of Louisiana. (*Ibid.*, 1914, Act 296, sec. 1).

MAINE

Constitutional Provisions

Uniformity. All taxes upon real and personal estate, shall be apportioned and assessed equally, according to the just value thereof. (Constitution, Art. IX, sec. 8).

Exemptions. The legislature shall never in any manner, suspend or surrender the power of taxation. (*Ibid.*, sec. 9).

Statutory Provisions

Property tax. Real estate includes the land, improvements, and all interests. (*Revised Statutes*, 1903, chap. 9, sec. 3). Mines of gold, silver or of the baser metals when opened and in process of development are exempt from taxation for ten years from the time of such opening. But this exemption does not affect the taxation of the lands or the surface improvements of the same at the same rate of valuation as similar lands and buildings in the vicinity. (*Ibid.*, chap. 9, sec. 6).

Corporations. Mining companies are taxed locally upon their property. Shares of capital stock in such corporations are not taxed to the owners. Bonds and other securities are taxed. (*Ibid.*, chap. 9, sec. 25).

MARYLAND

Constitutional Provisions

Uniformity. The General Assembly shall, by uniform rules, provide for separate assessment of land and classification and sub-classifications of improvements on land and personal property as it may deem proper; and all taxes thereafter provided to be levied by the state for the support of the general state government, and by the counties and by the City of Baltimore for their respective purpose, shall be uniform as to land within the taxing district, and uniform within the class or subclass of improvements on land and personal property which the respective taxing powers may have directed to be subjected to the tax levy. (*Declaration of Rights*, Art. XV).

Statutory Provisions

Property tax. All property of every kind shall be assessed for the purpose of taxation. (*Code of Maryland*, 1911, Art. 81, sec. 2). Property shall be assessed at full cash value. (*Ibid.*, sec. 4). Shares shall not be taxed when the property they represent is taxed locally. (*Ibid.*, sec. 4).

Corporation tax. Every ordinary business corporation shall be subject to taxation upon its property, real and personal, which would be taxable in this State if such Corporation were a natural person and engaged in a similar business. (Acts of Maryland, 1914, chap. 324, sec 88-C).

Bonus tax. Every corporation of this State having a capital stock, except railroads and building or homestead associations, shall, at the time of incorporation, pay for the use of the State a bonus tax at the rate of twenty cents for every thousand dollars of the amount of its authorized capital stock, but in no case shall such payment be less than twenty dollars. (*Ibid.*, sec 88-A).

Annual franchise tax. Every ordinary business corporation of Maryland shall pay annually to the State Treasurer an annual tax for its franchise to be a corporation graduated according to the capital stock. (*Ibid.*, sec. 88-D). Foreign mining corporations pay a license tax graduated according to the amount of capital employed in the State. (*Ibid.*, 1908, chap. 240, p. 53).

MASSACHUSETTS

Constitutional Provisions

Nothing specific on mines.

Statutory Provisions

Uniformity. All property shall be subject to taxation. (*Revised Laws*, 1902, chap. 12, sec. 2).

Capital stock. Domestic mining and quarrying companies pay semi-annually a tax of $\frac{1}{20}$ of one percent on the par value of the whole amount of capital stock. (*Ibid.*, chap. XIV., sec. 49). Foreign companies pay semi-annually $\frac{1}{40}$ of one per cent. In no case is the tax more than \$300. The value of the real and personal property is deducted from the par value of the stock.

Net profits. Domestic mining and quarrying companies are required to pay a tax of four percent upon net profits estimated from reports filed with the tax commissioner. (*Ibid.*, chap. XIV., sec. 51).

MICHIGAN

Constitutional Provisions

Uniformity. The legislature shall provide an uniform rule of taxation, except on property paying specific taxes, and taxes shall be levied on such property as prescribed by law. (Constitution, Art. XIV, sec. 11).

Specific taxes. The State may continue to collect all specific taxes accruing to the treasury under existing laws. The legislature may provide for the collection of specific taxes from

banking, railroad and other corporations hereinafter created. (*Ibid.*, Art. XIV, sec. 10).

Assessing. Property shall be assessed at its cash value. (*Ibid.*, Art. XIV, sec. 12).

Statutory Provisions

Property tax. All property real and personal, within the jurisdiction of the State, not expressly exempted, shall be subject to taxation. (*Compiled Laws of Michigan*, 1897, sec. 3824).

Real property includes all lands, buildings, fixtures, and appurtenances thereto, except as expressly exempted by law. (*Ibid.*, sec. 3825).

Assessing. Real property shall be assessed in the township or place where situated. (*Ibid.*, sec. 3826). Personal property includes moneys, annuities, royalties, shares, all interests in land, all improvements on leased lands, except where the value of the real property is also assessed to the lessee or owner of such buildings and improvements. (*Ibid.*, sec. 3831).

MINNESOTA

Constitutional Provisions

Uniformity. All taxes shall be as nearly equal as possible and all property on which taxes are to be levied shall have a cash valuation and be equalized and uniform throughout the state. (Constitution, Art. IX, sec. 1). All real and personal property shall be subject to taxation at its true value in money. (*Ibid.*, Art. IX, sec. 3).

Statutory Provisions

Assessing. All property shall be assessed at its true and full value in money. (General Statutes, 1913, sec. 1987).

In valuing real property on which there is a mine or quarry, the same shall be valued at such a price as such property including the mine or quarry would bring at a fair voluntary sale for cash. (*Ibid.*, sec. 1987).

Real property includes the land itself, buildings, improvements, and all rights and privileges appertaining thereto, and all mines, minerals, quarries, fossils on or under the same. (*Revised Laws*, 1905, sec. 796). Minerals rights owned separately from the surface may be assessed and taxed separately from such surface rights. (*Laws of Minnesota*, 1905, chap. 161).

Classification and valuation of property. All real and personal property subject to a general property tax and not subject to any gross earnings or other lieu tax is hereby classified for purposes of taxation as follows:

Class 1: Iron ore whether mined or unmined shall constitute class one (1) and shall be valued and assessed at fifty (50) percent of its true and full value. If mined, it shall be assessed with and as a part of the real estate in which it is located, but at the rate aforesaid. The real estate in which iron ore is located, other than the ore, shall be classified and assessed in accordance with the provisions of classes three (3) and four (4) as the case may be. In assessing any tract or lot of real estate in which iron ore is known to exist the assessable value of the ore exclusive of the land in which it is located, and the assessable value of the land exclusive of the ore shall be determined and set down separately and the aggregate of the two shall be assessed against the tract or lot. (*Laws of Minnesota*, 1913, chap. 483).

Money and credits. "Money" and "credits" are hereby exempted from taxation other than that imposed by this act and shall hereafter be subject to an annual tax of three mills on each dollar of the fair cash value thereof. (*Laws of Minnesota*, 1911, chap. 285, sec. 1).

"Credits" shall mean and include every claim and demand for money or other valuable things, and every annuity or sum of money receivable at stated periods. (*Revised Laws*, 1905, sec. 798).

All taxes paid to the county treasurer under the provisions of this act shall be apportioned, one-sixth to the revenue fund of the State of Minnesota, one-sixth to the county revenue fund, one-third to the city, village, or town and one-third to the school district in which the property is assessed. (*Laws of Minnesota*, 1911, chap. 285, sec. 13).

MISSISSIPPI

Constitutional Provisions

Uniformity. Taxation shall be uniform and equal throughout the State. Property shall be taxed in proportion to its value. Property shall be assessed by uniform rules according to its value. (Constitution, sec. 112).

Corporations. The legislature may provide for a special mode of valuation and assessment of corporate property, but all such property shall be assessed at its true value. (*Ibid.*,

sec. 112). The property of all private corporations for pecuniary gain shall be taxed in the same way and to the same extent as the property of individuals. (*Ibid.*, sec 180).

Statutory Provisions

Assessing. Property shall be valued on a full cash basis. (*Code of Mississippi*, 1906, chap. 122, sec. 4268).

Corporations. Corporations pay a property tax on their lands which are assessed the same as land of individuals. The capital stock is assessed at market value and an allowance is made for property taxed. (*Ibid.*, sec. 4267).

MISSOURI

Constitutional Provisions

Uniformity. Taxes shall be uniform upon the same class of subjects within the territorial limits of the authority levying the tax. (Constitution, Art. X, sec. 3).

Property tax. All property subject to taxation shall be taxed in proportion to its value. (*Ibid.*, Art. X, sec. 4).

Exemptions. All laws exempting property, other than as enumerated, shall be void. (*Ibid.*, Art. X, sec. 7). The power to tax corporations and corporate property shall not be surrendered or suspended by act of the General Assembly. (*Ibid.*, Art. X, sec. 2).

Corporation fee. All corporations upon organization under the laws of the State shall pay a graduated fee. (*Ibid.*, Art. X, sec. 21).

Statutory Provisions

Property tax. Taxes shall be levied on all property, real and personal, except as stated. (*Revised Statutes*, 1909, sec. 11334).

Assessing. All property of all mining corporations shall be assessed and taxed in their corporate names. (*Ibid.*, sec. 11357).

MONTANA

Constitutional Provisions

Uniformity. Taxes shall be uniform on the same class of subjects in the same jurisdiction. (Constitution, Art. XII, sec. 11). The legislature shall levy a uniform rate of assessment. All property shall be taxed at its true value. (*Ibid.*, Art. XII, sec. 1).

Licenses. The legislature may impose a license tax upon persons and corporations doing business in the State. (*Ibid.*, Art. XII, sec. 1).

Corporations. The power to tax corporations shall not be suspended. (*Ibid.*, Art. XII, sec. 7).

Mineral property. Mining claims including those containing gold, silver, copper, lead, coal, or other valuable mineral deposits, after purchase from the United States shall be taxed at the price paid the United States therefor when used for mining purposes. Any part used for other purposes shall be taxed at its value for such other purposes as provided by law. (*Ibid.*, Art. XII, sec. 3).

All machinery used in mining and all property and surface improvements which have a separate value from such mines or mining claims shall be taxed as provided by law. (*Ibid.*, Art. XII, sec. 3). Annual net proceeds of all mines and mining claims shall be taxed as provided by law. (*Ibid.*, Art. XII, sec. 3).

Statutory Provisions

Property tax. All property is subject to taxation except as exempt. (*Revised Code of Montana*, 1907, sec. 2498).

Real estate includes all mines, minerals and quarries in and under the land. (*Ibid.*, sec. 2501). Improvements on mining claims are not exempt from taxation. (*Ibid.*, sec. 2570).

Property tax. All property is subject to taxation except proceeds at the same rate applied to property. The local assessors determine the net proceeds by deducting from the value of the output the actual cost of extracting from the mine, the actual cost of transportation to the place of reduction or sale, the actual cost of reduction or sale, and the cost of repairs and necessary construction about the mine, mill, and reduction works. No deduction is made for the salaries of officers not actually engaged in the working of the mine. (*Ibid.*, sec. 2562 to 2571).

NEBRASKA

Constitutional Provisions

Uniformity. Taxes shall be uniform as to class and in proportion to value. (*Constitution*, Art. IX, sec. 1).

Statutory Provisions

Property tax. Real estate shall include all mines, minerals,

quarries, mineral rights, mineral springs, and wells, and all privileges pertaining thereto. (*Revised Statutes*, 1903, sec. 10400). Property of companies and mines shall be listed and taxed where located. (*Ibid.*, sec. 10403).

NEVADA

Constitutional Provisions

Uniformity. The legislature shall provide by law for a uniform and equal rate of assessment and taxation, and shall prescribe such regulations as shall secure a just valuation for taxation of all property, real, personal and possessory, except mines and mining claims. (Constitution, Art. X, sec. 1).

Mines and mining claims. Mines and mining claims, not patented, shall be taxed upon the proceeds alone. When patented, each mine shall be assessed at not less than five hundred dollars except when one hundred dollars in labor has been actually performed on such patented mine during the year, in addition to the tax upon net proceeds. (*Ibid.*, Art. X, sec. 1).

Statutory Provisions

Assessment of patented mines. The term "patented mine" as used in the Nevada act means "each separate, whole or fractional patented mining location whether such whole or fractional mining location be covered by an independent patent or be included under a single patent with other mining locations". (*Laws of Nevada*, 1915, chap. 206, sec. 1). Each patented mine shall be assessed at not less than five hundred dollars, except where one hundred dollars in labor has been actually performed upon such patented mine during the calendar year for which assessment is levied, in addition to the tax on the net proceeds (*Ibid.*, sec. 2). The county assessor shall assess each patented mine in his county at not less than five hundred dollars. (*Ibid.*, sec. 3).

The owner of two or more contiguous patented mines may perform all the work required by Article X of the constitution upon one mine only; provided, the aggregate amount of such work shall be equal to one hundred dollars for each of such contiguous patented mines. (*Ibid.*, sec. 9).

Net proceeds and surface improvements. Surface improvements and net proceeds are taxed at the same rate as property in general, payable quarterly. (*Revised Laws*, sec. 3622, 3687). The Tax Commission ascertains the proceeds by deducting from

the gross yield only such actual costs of extraction from the mine, of milling and concentrating, of transportation, reduction, and sale as shall be deemed by said commission to be just, proper and reasonable, and not introduced to deprive or defraud the State of any portion of its just revenue. In any suit at law arising under the provisions of this section, the burden of proof shall be upon the owner of such mine to establish that any item of cost disallowed by the commission is nevertheless just, reasonable and proper and not entered to defraud the State. (*Laws of Nevada*, 1915, chap. 153, sec. 13).

NEW HAMPSHIRE

Constitutional Provisions

Uniformity. The general court shall have power to levy proportional and reasonable assessments, rates, and taxes upon all persons and estates within its limits. (Part 2, Art. 5).

Statutory Provisions

Property tax. Real estate shall be taxed independently of any mines or ores contained therein until such mines or ores shall become a source of profit. (*Public Statutes*, 1901, Title IX, chap. 55, sec. 4).

When mines, ore, or rights therein are owned by a person other than the one to whom the real estate belongs, they are taxed separately as real estate. (*Ibid.*, Title IX, chap. 58, sec. 2).

Corporation. Stock in corporations in the State shall be taxed except where the property represented by the stock is taxable directly to the corporation. (*Ibid.*, Title IX, chap. 55, sec. 7).

Stock in corporations located out of the State, owned by persons living in the State, shall be taxed except where either the stock or the property represented by it is taxed in the towns or states where the corporations are located. (*Ibid.*, Title IX, chap. 55, sec. 7).

NEW JERSEY

Constitutional Provisions

Uniformity. Property shall be assessed for taxes under general laws and by uniform rules, according to its true value. (Constitution, Art. IV, sec. 7).

Statutory Provisions

Property tax. All property not exempt shall be taxable at its true value. (*Compiled Statutes of New Jersey*, 1910, IV, 5076).

All property shall be valued by assessors of the respective taxing districts. (*Ibid.*, p. 5076).

Franchise tax. All corporations pay annually a graduated license fee or franchise tax on the amounts of capital stock issued and outstanding. This does not apply to mining companies having at least fifty percent of their capital invested in the State. (*Laws of New Jersey*, 1906, chap. 19).

NEW MEXICO

Constitutional Provisions

Uniformity. Taxes upon tangible property shall be in proportion to the value thereof and taxes shall be equal and uniform upon subjects of taxation of the same class. (Constitution, Art. VIII, sec. 1).

Statutory Provisions

Mining claims. No tax shall be assessed, levied or collected upon any mining claim, located under the mining laws of the United States, nor upon any shaft or workings therein, until after patent shall have been duly issued therefor by the United States, and for one year thereafter; but nothing herein contained shall be held or construed to exempt from taxation, as provided by law, the improvements upon any such mining claim, other than the shafts and other workings as aforesaid, nor the net product of any such mining claim. (*New Mexico Statutes*, chap. CVII, sec. 1).

Valuation. It shall be the duty of the county assessor to fix the valuation of all property (listed for taxation) at one-third of the actual cash value thereof in accordance with the standards of valuation of the different classes of property as fixed by the county commissioners. (*Ibid.*, sec. 11).

Classification. For the purpose of taxation all mines, mining claims or mineral lands held for mining purposes situated in New Mexico shall be divided into two classes, as follows:

1. Productive mines and mineral lands.
2. Non-productive mines and mineral lands.

Productive mines and mineral lands shall be such as are mined in good faith for the mineral values thereof, with a fair degree of continuity throughout the year for which the same are assessed and on a scale reasonably commensurate with the opportunity and difficulty of disposing of the product thereof. All other mines, mining claims and mineral lands shall be assessed as non-productive. (*Laws of New Mexico*, 1915, chap. LV, sec. 1).

Net proceeds. Every person, corporation or association of persons, engaged in the actual mining of gold, silver, copper coal, lead, or other valuable mineral deposit concerning the operation of each mine or group of mines worked by such person, corporation, or association during the year next preceding and giving a statement of the product from such mines or mineral lands. This shall "include a true and correct statement and account of the actual expenditures of money and labor in extracting such ore or mineral from the mine or mineral lands and of transporting the same to the mill or other treatment or reduction or refining works, the cost of preparation, treatment, reduction, refining and handling of the same and conversion thereof into money or its equivalent" and any other information which may be required by the State Tax Commission and which would be of benefit or advantage to such Commission in ascertaining the net value of such production. (*Ibid.*, sec. 2).

"The State Tax Commission must from such statement or such other information as it can procure determine the net value in dollars of the output of each of such mines during the previous year. The amount of such valuation shall be taken and considered and assessed as in lieu of the assessable value of the mineral in such mine, mining claim or claims, or mineral land from which, or any portion of which, such mineral shall have been extracted; and such net value of said mineral so extracted shall be taxed at the same rate as other properties are taxed in the county, and other subdivision in which such mine is situated, and the taxes levied therein shall be considered as taxes upon such mineral values in said lands. By the 'net value' of mineral output, as such term is herein used, is meant the difference between the actual cost of production, transportation, treatment, shipment and sale of same, including coke, made from coal, and the amount realized, if sold, or which could be realized at the time of making such report by the sale of the same, not to be less, however, in either event, than the true market value thereof." (*Ibid.*, sec. 4).

Improvements. "Nothing contained in this act must be construed to exempt from taxation any improvements, buildings, erections, structures, or machinery placed upon any mine or mining claim, or used in connection therewith or used in the transportation, reduction or refining of the product thereof, or to exempt from taxation any value which any mining claim or mineral lands may have for other than mining purposes, but all such buildings, erections, structures and machinery and all grazing, building and other surface values of said mining claims or mineral lands shall be assessed and taxed in the same manner as other property of like kind." (*Ibid.*, sec. 7).

Non-productive patented mining claims. "All non-productive patented mining claims and other non-productive mineral lands known to contain valuable deposits of coal, ores or other minerals, in commercially workable quantities, shall be assessed and taxed upon the reasonable valuation thereof as undeveloped mineral lands in addition to their surface value for grazing, agriculture, timber, or other purposes. In fixing such valuation, it shall be the duty of the taxing officials to take into consideration the transportation facilities, distance from railroads, and opportunity for marketing the product of such mining claims or mineral lands." (*Ibid.*, sec. 8).

Mineral rights. "In cases where the minerals or mineral rights in the land belong to owners other than the owners of the land and such ownership is shown by deeds duly recorded in the office of the county recorder of the county in which such land is situated, such minerals or mineral rights shall be assessed separately against the owners thereof and the taxes thereon shall not be a lien upon the land; and the taxes upon such land shall not be a lien upon such separately owned mineral or mineral rights." (*Ibid.*, sec. 8).

Mine accounts. "In order that all such facts so required to be contained in such statement may be accurately determined and verified, it shall be the duty of such person or corporation to keep and preserve at the mining place, or principal office, thereof in this state accurate and permanent accounts showing in detail all and singular the various items of expense entering into the costs of production, transportation, treatment, milling, refining and sales, and also the amounts realized from the sale of all and any portion of such mineral and the product thereof and the State Tax Commission shall have power to prescribe the method of keeping such accounts." (*Ibid.*, sec. 2).

In making the statement of expenditures mentioned in the preceding section there shall not be included therein any amounts expended for machinery, or other improvements, or appliances for such mining operations or for improvements made for the purposes of reducing or refining such mineral, or for the construction of mills or other reduction works, including coke ovens, and washeries or improvements made for transporting of such mineral, but all expenditures made for any and all such improvements, structures, buildings or other facilities shall be considered as part of the capital account of such mining operations and as no part of the operating expense thereof. Such expenditures shall not include the salaries, or any portion thereof, of any person, or officer, not actually engaged in the working of such mine, or in the reduction, transportation, sale or refinement of such mineral, or personally superintending the management thereof. (*Ibid.*, sec. 3).

Corporations. The owner or holder of stock in any firm or corporation shall not be assessed individually for the stock, if the entire capital or property represented by the stock has been taxed. (*New Mexico Statutes*, chap. CVII, sec. 14).

NEW YORK

Constitutional Provisions

Nothing specific on mines.

Statutory Provisions

Property tax. Real estate includes land, improvements, and all mines, minerals, quarries, and fossils in and under the same, except mines belonging to the State. (*Laws of New York*, 1909, chap. 62, sec. 3). All real property within the State, and all personal property situated or owned within the State, is taxable, unless exempt from taxation by law. (*Ibid.*, sec. 3).

Personal property of mines is taxable locally. (*Ibid.*, chap. 62, sec. 5).

Capital-stock tax.—The capital stock of every company liable to taxation, except such part of it as shall have been excepted in the assessment-roll or shall be exempt by law, together with the surplus profits or reserve funds exceeding ten percent of its capital, after deducting the assessed value of its real estate, and all shares of stock in other corporations actually owned by such company which are taxable upon their capital stock under the laws of this State, shall be assessed at its actual value. (*Ibid.*, sec. 12).

Domestic mining companies having more than forty percent of their capital stock invested in the State are exempt from the capital-stock tax. The rate of this tax varies according to net assets, market price of the stock, and dividends paid. (*Ibid.*, chap. 62, sec. 182 and 183).

Franchise tax. Domestic mining companies having more than forty percent of their capital stock invested in the State are exempt from the capital-stock tax. The rate of this tax varies according to net assets, market price of the stock, and dividends paid. (*Ibid.*, chap. 62, sec. 182 and 183).

NORTH CAROLINA

Constitutional Provisions

Uniformity. Taxation shall be by uniform rule of all real and personal property according to its true value in money. (Constitution, Art. V, sec. 3).

Income tax. The legislature may tax incomes, but not both property and income. (*Ibid.*, Art. V, sec. 3).

Statutory Provisions

Assessing. Real property shall be valued according to its true value in money, considering the mines, minerals, quarries or other valuable deposits known to be available therein and their value. (*Revised Statutes*, sec. 5203). Real property includes land, improvements and all rights and privileges and all estates therein. (*Laws of North Carolina*, 1903, chap. 251). Mineral rights severed from the surface shall be assessable to the owner of the mineral rights. (*Ibid.*, 1913, chap. 203, sec. 32).

Capital stock. Every mining corporation shall pay to the state treasurer annually a tax upon each one hundred dollars of the actual value of its whole capital stock. (*Revised Statutes*, 1905, sec. 5108). As applied to domestic corporations, the tax is based on issued and outstanding capital stock, and as applied to foreign corporations it is based on the proportion of capital stock represented by property owned and used and business transacted in the State.

NORTH DAKOTA

Constitutional Provisions

Uniformity. Taxes shall be uniform upon the same class of property. (Constitution, sec. 176).

Assessing. All taxable property, except as hereinafter in this section provided, shall be assessed in the county, city, township, village, or district in which it is situated, in the manner prescribed by law. The property, including franchises of all companies or corporations operating in this state and used directly or indirectly in the carrying of persons, property or messages, shall be assessed by the State Board of Equalization in a manner prescribed by such State Board as may be provided by law. (*Ibid.*, sec. 179).

Statutory Provisions

Uniformity. All property in the State shall be subject to taxation. (*Revised Code*, 1905, sec. 1481).

Property tax. All property shall be assessed at its full value in money. (*Ibid.*, sec. 1512). Real property includes lands, improvements, and all mines, minerals, and quarries in and under the same and all rights and privileges appertaining thereto. (*Ibid.*, sec. 1482).

Assessors shall assess each division of lignite coal and minerals (separate mineral right) in the county in which it actually lies when the ownership is severed from that of the surface, whether the minerals are known to exist or not. (*Laws of North Dakota*, 1911, chap. 297).

OHIO

Constitutional Provisions

Uniformity. All property shall be taxed according to a uniform rule at its true cash value. (Constitution, Art. XII, sec. 2).

Corporation. Corporate property shall forever be taxed like the property of individuals. (*Ibid.*, Art. XII, sec. 4).

Mines. Laws may be passed providing for the imposition of taxes upon the production of coal, oil, gas, and other minerals. (*Ibid.*, Art. XII, sec. 10).

Statutory Provisions

Property tax. All property shall be subject to taxation. (*General Code*, 1910, sec. 5328).

Real property includes not only land, but all improvements and all rights. (*Ibid.*, sec. 5322). Property shall be assessed at its true value in money. Mineral rights, separately owned from the surface, shall be assessed and taxed independently of the surface and against the owner of the rights. (*Ibid.*, sec.

5560-5563). If the value of any petroleum, oil, and natural gas wells, coal and ore mines, limestone quarries, fire-clay pits, or works of any kind designed for the production of mineral of any kind increases or diminishes in value \$100 from the valuation in the quadrennial assessment, the assessor may make corrections annually when he lists personal property. (*Ibid.*, sec. 5562).

Capital-stock tax. All corporations, except public utility companies and certain financial companies, pay to the State for state purposes a tax of three-twentieths of one percent on the par value of outstanding stock of domestic corporations and on the proportion of the authorized capital stock of foreign corporations represented by property owned and used in business transacted in Ohio. (*Ibid.*, sec. 5381-5386).

OKLAHOMA

Constitutional Provisions

Uniformity. Taxation shall be uniform on the same class of subjects. (Constitution, Art. X, sec. 5).

Assessing. All property which may be taxed ad valorem shall be assessed for taxation at its fair cash value, estimated at the price it would bring at a fair voluntary sale. (*Ibid.*, Art. X, sec. 8). Nothing in the Constitution shall be construed to prevent taxation of different classes of property by different means or methods. (*Ibid.*, Art. X, sec. 22).

Specific taxes. The legislature shall have power to provide for the levy and collection of license, franchise, gross revenue, income and graduated income taxes; also production or other specific taxes. (*Ibid.*, Art. X, sec. 12).

Statutory Provisions

Property tax. All property shall be subject to taxation. (*Oklahoma Statutes*, 1910, sec. 7302). Real property shall be construed to mean the land itself and all buildings, structures, and improvements and all rights and privileges thereto appertaining, and all mines, minerals and quarries on or under the same. (*Ibid.*, sec. 7304). Oil and gas property shall be listed. (*Ibid.*, sec. 7332).

Upon persons holding more than 640 acres of taxable land there is levied a graduated land tax in addition to the ad valorem tax charged against all property. The rate is graduated from one-fourth percent of the value of land in excess of 640

acres when the person holds not to exceed 1280 acres, to 10 percent upon the excess over 10,000 acres and not exceeding 25,000 acres of average taxable value. The average taxable value is taken as twenty dollars. Three hundred twenty acres shall be exempt from the tax regardless of the value of the land. (*Ibid.*, sec. 7525). A similar graduated tax is levied upon leaseholders. When a person holds by lease more than 640 acres and not to exceed 1280 acres a tax of one percent per annum is levied on the income, rents, and profits of the excess over 640 acres. The rate is increased according to the acreage held, up to ten percent upon the income from the excess over 5000 acres and not exceeding 10,000 acres. (*Ibid.*, sec. 7526).

Gross output tax. Every person, firm, association, or corporation engaged in the mining or production within the state of asphalt or of ores bearing lead, zinc, jack, gold, silver, or copper or of petroleum or of other crude oil or other mineral or of natural gas, shall file quarterly with the state auditor a statement under oath showing the gross amount of mineral, oil, or gas produced, the cash value at the place of production, the amount of royalty payable thereon, if any, to whom payable and whether it is claimed that such royalty is exempt from taxation by law; and shall at the same time pay to the State Auditor a tax equal to one-half of one percent of the gross value of asphalt and of ores bearing lead, zinc, jack, gold, silver, copper produced, less the royalty interest, and equal to three percent of the gross value of production of oil or gas, less the royalty interest. The owner of the royalty interest shall pay the tax upon the royalty interest. (*Laws of Oklahoma*, 1916, House Bill No. 1, amending Oklahoma Revenue Laws, sec. 7464).

The payment of the taxes specified shall be in full and in lieu of all taxes by the State, counties, cities, towns, and townships, school districts, and other municipalities upon any property rights attached to or inherent in the minerals, upon leases for the mining of asphalt, and ores bearing lead, zinc, jack, gold, silver, or copper or for petroleum or other crude oil or other mineral oil or for natural gas, upon the mining rights and privileges for the minerals aforesaid belonging or appertaining to land, upon the machinery, appliances and equipment used in and around any well producing oil or natural gas, or any mine producing the aforesaid minerals and actually used in the operation of such well or mine; and also upon the oil, gas, asphalt, or ores bearing minerals hereinbefore mentioned

during the tax year in which the same is produced and upon any investment in any of the leases, rights, privileges, minerals or property hereinbefore mentioned; but any interest in the land other than that herein enumerated, and oil in storage, asphalt, and ores bearing any of the minerals named, mined, produced, and on hand at the date as of which property is assessed for general and ad valorem taxation for any subsequent tax year shall be assessed and taxed as other property within the taxing district in which such property is situated at the time. (*Ibid.*, sec. 7464, as amended).

The gross production tax is levied and collected for the following specific purposes:

(1) For current expenses of State Government, two-thirds.

(2) For and in aid of the common schools of the county from whence the oil or gas and other mineral is produced, one-sixth (five mills).

(3) For and in aid of the construction of permanent roads or bridges in the county from whence the oil or gas and other mineral is produced, one-sixth (five mills).

License tax. Domestic corporations pay a license fee of 50 cents per \$1000 of capital stock, and foreign corporations \$1 per \$1000 capital stock employed in the State. This does not apply to companies paying the gross receipts tax. (*Revised Laws*, 1910, sec. 7539).

OREGON

Constitutional Provisions

Uniformity. There shall be a uniform rate of assessment and taxation. All property shall be taxed at its just value. (Constitution, Art. IX, sec. 1).

Statutory Provisions

Property tax. All real property and all personal property shall be subject to assessment and taxation in equal proportion. (*General Laws of Oregon*, 1909, sec. 3551). Real estate includes the land itself, improvements, all rights and privileges, and all mines, minerals, quarries, fossils, in, under, or upon the land. (*Ibid.*, sec. 3552). Personalty includes improvements by persons on lands claimed by them under the laws of the United States. (*Ibid.*, sec. 3553).

Corporation license fee. Domestic mining companies having an output in excess of one thousand dollars pay annually a fee ranging from \$10 on \$5000 capital to \$200 if the capital

stock exceeds \$2,000,000. If the output is less than \$1000, they pay \$10 per annum as a license. (*Laws of Oregon*, 1913, chap. 73).

PENNSYLVANIA

Constitutional Provisions

Uniformity. All taxes shall be uniform on the same class of subjects. (Constitution, Art. IX, sec. 1, par. 153).

Statutory Provisions

Property tax. Companies pay locally a property tax. (*Pennsylvania Laws*, 1844, 486).

Anthracite tax. Every ton (2240 pounds) of anthracite mined shall be subject to a tax of two and one-half percent of the value when prepared for the market, which tax shall be assessed at the time when the coal has been mined and is ready for shipment or market.¹ The officer in charge of the mine shall assess the product daily as shipped and upon the first day of the month shall report under oath the assessed value of the shipment for the preceding month and a total for the year on January first. The officer shall receive one percent of the tax collected as compensation for the services imposed on him. If the officer fails or refuses to assess the product as required by law, the tax is increased by ten percent and the officer is subject to a fine of \$500 or one year imprisonment or both. Fifty percent of the proceeds of the tax is paid to the fund for the State Highways of the Commonwealth, and fifty percent to the cities, boroughs, and townships where the coal is mined. (*Laws of Pennsylvania*, 1915, Act 331).

Capital stock. Corporations pay an annual tax of 5 mills on each dollar of the actual value of its capital stock. (*Purdon's Digest of Pennsylvania Laws*, p. 6065, sec. 18).

Loans. A deduction of 4 mills on every dollar of the face value of bonds or certificates of indebtedness is made by the treasurer of corporations when paying interest to bondholders. This deduction is to be paid to the state treasurer. (*Laws of Pennsylvania*, 1885, P. L. 194; Act of June 8, 1891, P. L. 229).

¹After the law of 1915 was enacted the courts declared the law of 1913 to be unconstitutional. No taxes have as yet (1916) been paid under the law of 1915 and the Deputy Attorney General writes (October 20, 1916): "Whether settlements will be made under the Act of 1915 and that question re-heard I am not able to advise now."

RHODE ISLAND

Constitutional Provisions

Uniformity. All laws should be made for the good of the whole; and the burdens of the state ought to be fairly distributed among the citizens. (Art. I, sec. 2).

Assessment. The General Assembly shall, from time to time, provide for making new valuations of property for the assessment of taxes in such manner as they deem best. (Art. IV, sec. 15).

Statutory Provisions

Property tax. All property shall be subject to taxation. (*General Laws*, 1909, chap. 56, sec. 1).

All property shall be assessed at its full and fair cash value. (*Ibid.*, chap. 58, sec. 3).

SOUTH CAROLINA

Constitutional Provisions

Uniformity. Taxation shall be uniform on all property, except mines and mining claims, the proceeds of which alone shall be taxed. (Constitution, Art. X, sec. 1).

Statutory Provisions

Property tax. All real and personal property shall be taxable except as noted. (*Code of South Carolina*, 1912, Title III, chap. XIV, sec. 287).

All personal property used in connection with mines and mining claims and all land not actually mined connected with mines and mining claims shall be assessed for taxation and taxed as is done in the case of all other personal and real estate. (*Ibid.*, sec. 304).

Mining rights. When the fee of the soil in any tract or lot of land is in one person, and the right to any minerals therein or structures thereon in another, the proceeds of the minerals and the structures shall be valued and taxed as personal property, to the owners thereof, respectively. (*Ibid.*, sec. 380).

Gross proceeds. In all cases where land is actually mined, such land shall not be assessed for taxation or taxed, but in lieu thereof, the gross proceeds alone of such mines and mining claims shall be assessed and taxed. Such gross proceeds shall be determined by the cash market value of the material mined. (*Ibid.*, sec. 304).

Corporation license. Corporations shall pay a tax of one-half mill upon each dollar of capital stock. (*Ibid.*, sec. 364).

SOUTH DAKOTA

Constitutional Provisions

Uniformity. All taxes shall be uniform on all property. (Constitution, Art. XI, sec. 2).

Statutory Provisions

Property tax. All real and personal property shall be subject to taxation. (*Compiled Laws*, 1913, sec. 2053). Real property shall include all lands, improvements, and all rights and privileges thereto belonging, and all mines, minerals and quarries in and under the same. (*Ibid.*, sec. 2054). All property shall be assessed at its true value in money. (*Ibid.*, sec. 2085). In valuing any real property upon which there is a coal or other mine, or stone or other quarry, the same shall be valued at such a price as such property including the mine or quarry, would sell at a fair voluntary sale for cash. (*Ibid.*, sec. 2085).

TENNESSEE

Constitutional Provisions

Uniformity. All property, real and personal, shall be taxed according to its value so that taxes shall be equal and uniform throughout the State. No one species of property shall be taxed higher than any other species of the same value. (Constitution, Art. II, sec. 28). The legislature may tax incomes derived from stocks and bonds not taxed ad valorem. (*Ibid.*, sec. 28).

Statutory Provisions

Property tax. All property shall be assessed at actual cash value. (*Laws of Tennessee*, 1907, chap. 602, sec. 4). All mineral interests shall be taxed as real estate. (*Ibid.*, sec. 5). Machinery shall be taxed as personal property. (*Ibid.*, sec. 8).

Annual-charter tax. Every domestic corporation and every foreign corporation qualified to transact business in the state, shall be required to pay annually to the State for state purposes a tax in the nature of an annual-charter fee ranging from \$5 to \$150 according to the amount of authorized capital stock. (*Ibid.*, chap. 434, as amended by *Laws of 1913*, first extra session, chap. 13).

Corporation tax. All corporations shall pay an ad valorem tax upon the full value of corporate property,—not less than the actual value of all shares of stock, together with the actual value of the bonded indebtedness. (*Ibid.*, 1907, chap. 602, sec. 22). Deductions shall be made for property outside the state.

TEXAS

Constitutional Provisions

Uniformity. Taxation shall be equal and uniform. All property shall be taxed in proportion to its value which shall be ascertained as provided by law. (Constitution, Art. VIII, sec. 1). The legislature shall have no power to release from taxation. (*Ibid.*, sec. 10).

Income tax. The legislature may tax incomes of both natural persons and corporations. (*Ibid.*, sec. 1).

Statutory Provisions

Property tax. All property shall be subject to taxation and valued at its true and full value in money. (*Statutes*, 1911, Art. 7503, 7530).

Real property includes the land itself and all buildings, structures, and improvements thereon, all rights and privileges belonging thereto, and all mines, minerals, quarries, and fossils in and under the same. (*Ibid.*, Art. 7504).

Taxable personal property includes royalties. (*Ibid.*, Art. 7505).

Property held under a lease or a term of three years or more, or held under a contract for the purchase thereof, belonging to this State, shall be considered for all the purposes of taxation, as the property of the person so holding the same. (*Ibid.*, Art. 7529). In valuing any real property in which there is a coal or other mine, or stone or other quarry, the same shall be valued at such a price as such property, including the mine or quarry, would probably sell at a fair voluntary sale for cash. (*Ibid.*, Art. 7530).

Corporation tax. Individuals and corporations operating oil wells shall make a quarterly report showing the total amount of oil produced during the quarter and the average market value thereof. They shall pay to the state treasurer an occupation tax for the quarter equal to one-half percent of the total amount of all oil produced at the average market value. (*Ibid.*, Art. 7383).

Franchise tax. Domestic corporations shall pay fifty cents on each one thousand dollars of authorized capital stock, unless the amount of stock issued plus the surplus and undivided profits shall exceed its authorized capital stock; in that event said corporations shall pay fifty cents on each thousand dollars of outstanding stock plus the surplus and undivided profits. The minimum tax shall be ten dollars. The rate shall be twenty-five cents per thousand dollars when the capital stock or the capital stock and surplus and profits exceed one million dollars. (*Ibid.*, Art. 7393). Foreign corporations pay a similar tax but graduated. (*Ibid.*, Art. 7394).

UTAH

Constitutional Provisions

Mines. All mines and mining claims, containing valuable mineral deposits after purchase from the United States, shall be taxed at the price paid the United States therefor, unless the land is used for other purposes. If used for other purposes, it shall be taxed as is property similarly used. Machinery used in mining and all property and surface improvements having a value separate and independent of such mines and the net annual proceeds shall be appraised and taxed by the State Board of Equalization. (Constitution, Art. XIII, sec. 4).

Statutory Provisions

Property. Real estate includes all mines, minerals and quarries in and under the land and all rights and privileges appertaining thereto. (*Statutes*, 1907, sec. 2505). Surface improvements having a separate value from the mine or claim not to be exempt from taxation. (*Ibid.*, sec. 2572). Capital stock and franchises shall be listed and taxed where the principal office or place of business is located. (*Ibid.*, sec. 2530).

Net proceeds tax. All mines report annually the net proceeds which are taxed at the same rate as other property. From the gross yield, including coke made from coal, or bullion or matter made from ore not taxed, deductions shall be made for the actual expenditures in mining, transporting, and reducing the product, including expenditures for labor, machinery, supplies used, improvements and transportation; but money invested prior to the period covered by the annual report shall not be included nor the salaries of officers not actually engaged in the state in the operations. The balance shall constitute the net proceeds. (*Ibid.*, sec. 2566).

Annual corporation license tax. All domestic corporations and all foreign corporations hereafter engaged in any business in this state shall procure a certificate from the Secretary of State, authorizing such corporation to engage in business within this state and each of the corporations shall pay to the Secretary of State a corporation license tax as follows: All corporations with an authorized capital stock of \$10,000 or less, \$5; with an authorized capital stock of more than \$10,000 and not to exceed \$25,000, \$10; and graduated to \$250 on an authorized capital stock of more than \$4,000,000. (*Laws of Utah*, 1915, chap. 42).

VERMONT

Constitutional Provisions

Nothing specific on mines.

Statutory Provisions

Property tax. Real and personal property shall be taxable. (*Public Statutes*, 1906, sec. 488).

Property shall be appraised quadrennially after 1910. (*Ibid.*, sec. 525). Forges, furnaces, mines, and quarries where stone is quarried shall be set in a column separate from real estate and designated as first-class real estate. All other real estate shall be designated as second-class real estate. (*Ibid.*, sec. 525). The interest of a grantee in severance from surface ownership, in mines, quarries, or the right of mining and quarrying shall be set in the list as real estate. (*Ibid.*, sec. 491).

Exemption. Municipalities may exempt from taxation for ten years quarries, mines, and such equipment as is necessary for the prosecution of the business and all capital and personal property used in such business, if the amount invested exceeds one thousand dollars. (*Ibid.*, sec. 499).

VIRGINIA

Constitutional Provisions

Uniformity. All property, except as provided, shall be taxed. All taxes shall be uniform upon the same class of subjects. (Constitution, Art. XIII, sec. 168).

Assessing. Property shall be assessed at a fair market value to be ascertained as prescribed by law. Nothing in this Constitution shall prevent the General Assembly, after the first day of January, 1913, from segregating for the purposes of taxation the several kinds and classes of property, so as to specify and

determine upon what subjects state taxes and upon what subjects local taxes may be levied. (*Ibid.*, sec. 169). Real estate shall be reassessed every five years. (*Ibid.*, sec. 171). The General Assembly shall provide for the special and separate assessment of all coal and other mineral land; but until such special assessment is made, such land shall be assessed under existing laws. (*Ibid.*, sec. 172).

Income tax. The General Assembly may levy income taxes. (*Ibid.*, sec. 170).

Corporation tax. The State shall have the right to tax corporations. (*Ibid.*, sec. 64).

Statutory Provisions

Property tax. All real estate, except as exempted, shall be subject to an annual tax. (*Code of Virginia*, 1904, sec. 456). Machinery and fixtures to real estate in mining establishments shall be assessed and taxed against the owner thereof. (*Ibid.*, sec. 485). In assessing real estate, the actual value of the minerals shall be considered; if the title to the minerals is separate from the title to the surface, it shall be assessed and taxed to the owner. (*Laws of Virginia*, 1910, sec. 437a).

Capital-stock tax. A graduated state franchise tax is collected; the amount varies from \$10 on \$25,000 capitalization to \$200 on \$1,000,000 and \$10 for each \$100,000 in excess thereof. (*Ibid.*, 1910, chap. 58). This tax is levied on domestic corporations only.

Registration fee. An annual tax or registration fee is paid by all corporations, foreign and domestic. The tax is graduated and based on total authorized capital stock. It ranges from \$5, on a capitalization of \$15,000, or less, to \$25, when in excess of \$300,000. (*Ibid.*, 1908, chap. 227).

WASHINGTON

Constitutional Provisions

Uniformity. All property shall be taxed in proportion to its value. (Constitution, Art. VII, sec. 1). The legislature shall provide by law a uniform and equal rate of assessment and taxation on all property according to its value in money. (*Ibid.*, sec. 2). The legislature may provide for the taxation of corporations. (*Ibid.*, sec. 3).

Exemptions. The legislature may by general law provide for the exemption of property other than that listed in the Constitution. (*Ibid.*, sec. 2).

Statutory Provisions

Property tax. All property shall be assessed at its true value in money. In valuing any real property in which there is a coal or other mine, or stone or other quarry, the same shall be valued at such a price as such property including the mine or quarry would sell at a fair, voluntary sale for cash. Taxable leasehold estate shall be valued at such a price as it would sell at a fair, voluntary sale for cash. (*Code of Washington*, sec. 9112). All property shall be assessed at not to exceed fifty percent of its true and fair value. (*Laws of Washington*, 1913, chap. 140).

License. An annual license fee of \$15 is levied upon companies having capital stock. (*Code*, sec. 3714).

WEST VIRGINIA

Constitutional Provisions

Uniformity. Taxation shall be equal and uniform throughout the state, and all property, both real and personal, shall be taxed in proportion to its value, to be ascertained as directed by law. The legislature shall have power to tax, by uniform and equal laws, all privileges and franchises of persons and corporations. (Constitution, Art. X, sec. 1).

Statutory Provisions

Property tax. Personal property includes the value of mine or manufactured products. (*Code of West Virginia*, 1906, sec. 794).

Leaseholds. Mineral rights owned separately from the surface shall be assessed and taxed to their owner. (*Ibid.*, sec. 923). As the minerals are exhausted, if the actual decrease in value is in excess of one hundred dollars, the assessor shall make such reduction in value as shall be proper and if development increases the value more than one hundred dollars, the assessor shall increase the assessment to the actual value thereof. (*Ibid.*, sec. 923).

Capital-stock tax. Domestic corporations pay, in addition to the general property tax, an annual state license based on authorized capital stock. Those corporations having the principal place of business and chief works in the State pay a tax varying from \$10, when the authorized capital stock is \$5000 or less, to \$170, when the authorized capital stock is \$1,000,000, with \$60 additional tax for each \$1,000,000 additional capital

stock. (*Ibid.*, 1909, chap. 68). When the principal place of business or chief works is located without the State, the tax varies from \$15 on a capitalization of \$10,000 or less, to \$675 when the authorized capital stock is more than \$4,000,000, with \$50 additional tax on each \$1,000,000 authorized capital stock in excess of \$4,000,000. (*Code of West Virginia*, sec. 1050). Foreign corporations pay a tax based on the proportion of the capital stock represented by its property owned or used in the State, the minimum tax being \$100. The rates are graduated. (*Ibid.*, sec. 1052).

WISCONSIN

Constitutional Provisions

Uniformity. Taxation shall be uniform. (Constitution, Art. VIII, sec. 1).

Income tax. Taxes may be imposed on incomes, which taxes may be graduated, and progressive. (*Ibid.*, Art. VIII, sec. 1).

Statutory Provisions

Property tax. All property, unless specially provided for, shall be assessed locally. (*Statutes of Wisconsin*, 1911, sec. 1034). Real estate shall include all lands, improvements, rights, etc. (*Ibid.*, sec. 1035). Real property shall be valued by the assessor from actual view or from the best information that the assessor can practically obtain, at the full value which could ordinarily be obtained therefor at private sale. (*Ibid.*, sec. 1052). Mineral rights and reservations held by other than the owner of the surface shall be taxable. (*Ibid.*, sec. 1042j). The assessor in determining the value of land shall consider minerals, quarries, and other valuable deposits known to be available therein and their value. "But the fact that the extent and value of minerals and other valuable deposits are unascertained shall not preclude the assessor from affixing to such parcel of land, the value that would ordinarily be obtained therefor at private sale." (*Ibid.*, sec. 1052).

Lead and zinc mines and lands. "For purposes of assessment and taxation lands containing deposits of lead or zinc shall be valued in the following manner, to wit: The value of each parcel of such land, exclusive of its mineral content, shall first be determined, and to this there shall be added, in lieu of the value of such mineral content, one-fifth of the gross amount of sales of any ore, mineral or deposit extracted from

such land at any time and sold during the preceding calendar year. Nothing herein shall be construed to exempt from taxation the buildings, machinery, mills, equipment, stores, supplies or other personal property of any person, copartnership, corporation, association or company engaged in mining or extracting such deposits." (*Laws of Wisconsin*, 1915, chap. 388, sec. 1. To be numbered sec. 1053 of the Statutes). "Every owner of such land, and every person, copartnership, corporation, association or company engaged in mining or extracting such deposits shall furnish to the assessor of incomes of the district a verified statement or return giving a correct description of each such parcel of land, the name of the owner thereof, the amount of sales or purchases of all ore, minerals and deposits mined or extracted therefrom at any time and sold during the preceding calendar year. In the discretion of the assessor of incomes, similar reports may be required from each person, copartnership, association, corporation or company engaged in purchasing such ore, minerals or deposits." (*Ibid.*, sec. 2). "The assessor of incomes shall determine the gross amount of sales of such ore, mineral, or deposits from each parcel of land and shall certify the same to the assessor of each district. On the basis of such sales the valuation of each such parcel of land shall be computed by the assessor and shall be taxed as other property in the same district is taxed." (*Ibid.*, sec. 3).

Income tax. The State income tax is levied upon corporations and upon individuals. (*Laws of Wisconsin*, 1911, chap. 658. *Ibid.*, 1913, chap. 27, 443, 487, 554, 615, 720. See also *Wisconsin Income Tax Law*, 2d Ed., Wis. Tax Commission, Madison, 1913).

The rate upon the income of corporations is 2 percent on the first \$1000 of taxable income, and there is a graduation of the rate up to 6 percent on all taxable income in excess of \$7000. (*Laws of Wisconsin*, 1913, chap. 720).

The rate upon the taxable incomes of individuals is graduated from 1 percent on the first \$1000 to 6 percent on the excess over \$12,000.

The term income includes "all royalties from mines or the possession or use of franchises or legalized privileges of any kind". (*Ibid.*, sec. 1087m-2).

In determining taxable income, rentals, royalties, and gains or profits from the operation of any mine, or quarry shall follow the situs of the property from which derived. (*Ibid.*, chap. 720, sec. 1087m-2).

Deductions allowed a corporation include "ordinary and necessary expenses actually paid within the year out of income in the maintenance and operation of its business and property, including a reasonable allowance for depreciation by use, wear, and tear of property from which the income is derived and in the case of mines and quarries an allowance for depletion of ores and other natural deposits on the basis of their actual original cost in cash or the equivalent in cash." (*Ibid.*, chap. 720, sec. 1087m-3).

WYOMING

Constitutional Provisions

Uniformity. All taxation shall be equal and uniform. (Constitution, Art. I, sec. 28). All property, except as provided, shall be uniformly assessed for taxation and the legislature shall prescribe such regulations as shall secure a just valuation for taxation of all property. (*Ibid.*, Art. XV, sec. 11).

Exemptions. The legislature may by general laws provide for the exemption of property other than that listed in the Constitution. (*Ibid.*, Art. XV, sec. 12).

Mines. All mines and mining claims shall be taxed on surface improvements and, in lieu of taxes on land, also on the gross product, provided that the product of all mines shall be taxed in proportion to the value thereof. (*Ibid.*, Art. XV, sec. 3). All coal lands in the State from which coal is not being mined shall be listed for assessment, valued for taxation and assessed according to value. (*Ibid.*, Art. XV, sec. 2).

Statutory Provisions

Property tax. All property not exempted is subject to taxation in manner directed. (*Compiled Statutes*, 1910, sec. 2324).

Gross product tax. In addition to the taxes on surface improvements and in lieu of taxes upon the land on which the claims are being worked, there shall be levied and collected a tax on gross product of all mines, oil-wells, and quarries. (*Laws of Wyoming*, 1909, sec. 2449). The Commissioner of Taxation shall appraise the value of the gross products of all mines, and submit such appraisements to the State Board of Equalization. (*Ibid.*, chap. 66).

CHAPTER V

METHODS OF TAXING MINES AND MINERAL LANDS IN THE STATES

SUMMARY

An examination of the laws of the various states shows that taxes have been levied on mining property, as follows:

- A. A general property tax.
- B. A tax on the gross output or gross earnings, in addition to a property tax on improvements and, in some states, on land.
- C. A tax on net earnings, in addition to a property tax on improvements and, in some states, on land.
- D. A tax on some percentage of the gross and of the net earnings in addition to a tax on improvements and, in some states, on land.

In addition to one of the foregoing, there may be:

- E. A corporation tax, including a license or business tax.
- F. A state income tax.

Several states have previously used a tax which is not at present employed anywhere in the United States, namely,

- G. A tonnage tax.

GENERAL PROPERTY TAX

With the exception of South Carolina in the South; Oklahoma in the Middle West; and Colorado, Wyoming, Montana, Idaho, Utah, Nevada, and New Mexico in the West, all of the states now levy the general property tax on mining property the same as on other property.¹

As applied to mines the general property tax possesses the same advantages and disadvantages that prevail in its application to property in general, and in addition it may be said that the task of making a fair appraisal is more difficult for

¹In addition to the general property tax Pennsylvania has levied a tax upon anthracite mines. Oklahoma does not tax coal mines upon the gross proceeds but upon an ad valorem basis, while Wisconsin taxes all mines upon an ad valorem basis except those producing lead and zinc which are valued and assessed at one-fifth of the gross proceeds for the preceding year.

mines than for most other types of property. This is due to the fact that a technical knowledge of mines and mining operations is necessary on the part of the appraiser, if a proper valuation is to be made.²

The constitutions of most of the states have prescribed such limitations regarding taxation that the property tax as now employed is practically the only method which can be used in taxing mines, and it seems that the best plan of procedure in such states is to enact laws providing for the assessment of all property at full cash value, with competently trained and experienced mine appraisers to determine the value of mining property.

At the present time, with the exception of Minnesota, Michigan,³ Wisconsin, Arizona, Virginia, West Virginia, and Ohio, all the important mining states assessing mines under the general property tax, rely upon the work of local assessors. In those states in which the appraisal of mining property has been centralized or supervised by state officers there has been secured apparently a valuation of property which is generally recognized as being more equitable than is possible under the system of local and unsupervised assessment.

In 1913 the states taxing mines under the general property tax produced 82.66 percent of the total output of the mineral industry. In 1915, Arizona joined the list of state taxing mines under the general property tax and if Arizona had been included in the list of general property tax states in 1913, the percentage would have been increased from 82.66 to 85.56.⁵ From these data it is apparent that, at the present time at least, one of the greatest public problems to be solved in the mining states is that of valuation of mines, for the purpose of taxation under the general property tax.

A graduated tax may be levied upon land in order to discourage the holding of large estates or large tracts for speculative purposes. The graduated land tax in Oklahoma^{5a} has

²The appraisal of mines is considered in Chapter VII.

³For iron mines only.

⁵If the value of the coal output of Colorado, taxed under the general property tax, is included with the value of the output of the general property tax states, the percentage becomes 86.50.

^{5a}*Oklahoma Statutes*, 1910, sec. 7325, 7326.

^{5b}The mining law of Mexico which took effect July 1, 1916, calls for a general increase in taxation on all large properties with a corresponding

been noted in Chapter IV. In Mexico,^{5b} in Canada, and in Australia^{5c} this method of taxation is employed extensively.

GROSS OUTPUT AND PROPERTY TAX

In several states the gross value of the entire output of mines is entered upon the tax roll of the district and the mine is taxed on the value of its output at the same rate as is applied to property in general. This is in effect a declaration that the value of a mine is equivalent to the value of the product for one year. In addition, mines pay a property tax upon improvements. This plan is followed by Wyoming and South Carolina for all mines and, in a modified way, by Wisconsin and Oklahoma for certain types of mines.

Wyoming. A tax is levied on improvements upon mines in Wyoming⁶ and, in lieu of taxes upon the land, while the property is being worked, there is also a tax upon the gross product. This applies to all mines, oil-wells, and quarries.⁷

South Carolina. The Constitution of South Carolina provides that only the proceeds of mines shall be taxed.⁸ However, the statutes provide for the taxation of the personal property used in connection with mines and mining claims.⁹ When land is actually mined it is exempt from taxation¹⁰ and the proceeds are assessed at the cash market value and taxed at the same rate as other property.

Wisconsin. The lead and zinc mines and lands are valued for assessment at one-fifth of the gross amount of sales of ore

benefit for the small operators, the announced intention of the government being to break up holdings that are conserved more for speculative than for development purposes. The unit of taxation is the pertenencia, or mining claim, of one hectare or 2½ acres. The assessment on gold and silver mines is \$6 yearly on from 1 to 10 claims; 11 to 50 claims, \$12 each yearly; from 51 to 100 claims, \$18 per claim yearly; on 101 claims and upward, \$24 each yearly.

^{5c}Sleeman, H. R. Taxation in Australia. *Mining Magazine*, 1915, XIII, 92-96.

⁶*Laws of Wyoming*, 1909, sec. 2449.

⁷The assessment of all mines is based upon the gross output, allowance being made for operating expenses and also the valuation of the output at the mine, as regards distance from market, or railroads, quality of coal, etc. The State is districted and the same valuation placed upon the product of each district separately." Correspondence.

⁸Constitutions, Art. X, sec. 1.

⁹*Code of South Carolina*, 1912, Title III, chap. XIV, sec. 304.

¹⁰*Ibid.*, par. 304.

extracted from the mines or lands during the preceding calendar year. On this valuation the property is taxed at the same rate as other property in the district.¹¹ This valuation covers only the mineral content of the land and all buildings and surface improvements are taxed ad valorem.

Oklahoma. A variation from the preceding method has been used by Oklahoma. In this State in addition to the ad valorem tax on property, all mining and oil companies pay a tax on the actual cash value of the output, except coal mines which are taxed as other property.¹²

This is actually a gross earnings or gross output tax, the South Carolina and Wyoming method being practically a general property tax levied upon the value of the mine which is taken arbitrarily as the value of one year's output. The rate of the tax in Oklahoma is the same from year to year while in South Carolina and Wyoming the rate paid by mines depends on the levy upon all property.

Pennsylvania. In 1913 the Pennsylvania legislature enacted a law providing for a tax at the rate of two and one-half per cent of the value at the mine of every ton of anthracite when prepared for market.¹³ This follows the Oklahoma method in that the rate is fixed. However, the Pennsylvania tax is in addition to the property taxes which have been levied previously. The so-called "anthracite tax" is a state tax, but one-half of the proceeds of the tax is returned to the county.

A tax on output at a uniform rate throughout the State reduces mining practically to a leasing system. Title to the mine rests in the operator instead of the State as may be the case in the leasing system. In both instances the State receives a percentage of the value of the output.

The general objection made to this method of taxation is that usually no discrimination is made between mines producing at a high cost and those operating at low costs.¹⁴

NET EARNINGS AND PROPERTY TAX

Several of the Rocky Mountain states employ a tax upon

¹¹*Laws of Wisconsin*, 1915, chap. 388.

¹²*Laws of Oklahoma*, 1916, House Bill No. 1.

¹³*Laws of Pennsylvania*, 1913, Act 374. Amended by Laws of 1915, chap. 331. The law of 1913 was declared unconstitutional in 1915. See Chapter IV for the anthracite tax law of 1915.

¹⁴*Infra*, chapter VI.

both the net earnings and the improvements of productive mines. The net earnings tax was first used in order to encourage the development of mining property. It exempted unprofitable mines and attempted to place the tax burden according to ability. Instead of levying upon the net earnings of mines at a fixed or a graduated rate, all of the states now using this method of taxation tax net earnings at the same rate as other property, thus practically appraising each mine at its net earnings for one year.

The great difficulty in the use of this system is in the determination of the net earnings. The statutes of most of the states employing this method of taxation specify what deductions may be made from gross earnings in order to determine the net.

This system is now used in Idaho, Montana, Nevada, New Mexico, and Utah. Colorado uses a modified form of the system.

Idaho. Idaho taxes all mining claims purchased from the United States at the price paid the United States therefor, unless the surface, or some part of it, is used for purposes other than mining, in which event the land is taxed as is other land similarly used.¹⁵ All machinery and improvements on mines and mining claims are taxed as is other property.¹⁶ In addition to these property taxes, all mines pay a tax upon net profits. To determine the base for the net profits tax, deductions are made from the gross receipts as follows:

The actual expenditure for mining operations, for milling, concentrating, or reducing the ore, for transportation of the ore to the treatment plant, and for repairs, and improvements necessary to the plant used in all these operations. No deductions are allowed for the money invested in the mine, nor for the salaries of officers not immediately and consecutively employed in the working or management of the mine.¹⁷

Montana. Similarly, Montana taxes mining claims,¹⁸ improvements¹⁹ and the net proceeds.²⁰

Nevada. Nevada taxes surface improvements, net proceeds, and patented mining claims on which less than one hundred

dollars' worth of work has been done during the year, such a claim being assessed at five hundred dollars. The same rate is applied to net proceeds as to property in general.²¹

New Mexico. Mines and mining claims are taxed both upon surface improvements and the net product.²²

Utah. Utah appraises mining claims at the price paid for them to the government. Taxes are levied upon patented claims, all property and surface improvements,²³ and the net proceeds at the same rate applied to other property.²⁴

GROSS AND NET EARNINGS TAX WITH THE GENERAL PROPERTY TAX

The method of taxing a mine upon the gross earnings does not discriminate between profitable and unprofitable mines, nor between developing mines with a small output produced at a loss and developed properties. No distinction is made between two mines of equal output but operating under different conditions. On the other hand the system of taxing mines upon net earnings does not reach the unprofitable mine which may have some cash value and under the system of valuing mines at their net earnings for one year the rate applied to other property might not take from mines a fair share of the public revenue required.

By a combination of some percentage of the gross earnings with some percentage of the net earnings it has been thought that greater justice may be secured. This plan was used in 1913 and 1914 by Arizona and in a modified way is employed in Colorado.

Colorado. The law of Colorado divides mining property, except mines of coal, iron, asphaltum and quarries, into producing and non-producing. Mines having a gross annual output of less than five thousand dollars are classed as non-producing and all others are producing.²⁵ Producing metal mines are taxed upon a sum equal to one-fourth the gross proceeds or all the net proceeds as defined in the law in case the net exceeds one-fourth of the gross.²⁶ The net proceeds are determined by deducting from the gross value of the product, the actual cost

of mining, of transporting the product to the place of reduction or sale, and the actual cost of treatment, reduction or sale. Salaries of officers not actually and consecutively engaged may not be included.²⁷ The surface improvements of all mines are taxable as is other property.²⁸ Producing mines of coal, iron, asphaltum and quarries are assessed in the same manner as other property.²⁹

Arizona. In 1913 Arizona adopted a new plan for appraising mines under the general property tax. This plan was void after June 30, 1915, and as the legislature of 1915 failed to provide any special laws for the taxation of the mines, the mines hereafter will be taxed under the laws applying to property in general. While the act of 1913³⁰ specified that this method of taxation, adopted only for the time, was not to be considered as a method of taxing proceeds, yet the law in its wording, and in its operation apparently, was in no important detail different from the taxes on proceeds employed by the other states. All mines were taxed upon improvements. Mines were divided into two classes,—producing and non-producing. A producing mine was defined by the law as one which yielded net proceeds over and above the expenses enumerated in the law.³¹ All other mines were classed as non-producing and were taxed as other real estate. In addition to the taxes on improvements, producing mines paid a tax, at the same rate as property in general, upon the value of the mine which value was fixed arbitrarily by the law at four times the net proceeds plus one-eighth of the gross proceeds.³² The net proceeds were determined by deducting from the gross the actual expenses of operation and treatment including charges for repairs and betterment, and for transportation. It was specified that such expenses should not include money invested in the purchase price of the mine, in real estate, or in the construction of new mills or reduction works, nor the salaries or any portion of them of any persons not actually and consecutively engaged in working or managing the mine.³³

There was great dissatisfaction on the part of many of the tax payers of Arizona during the time this law was in force.

TONNAGE TAX

Mines may be taxed upon the tonnage basis, that is, there may be a fixed or graduated tax upon every ton of mineral product mined. When there is a flat rate there is no distinction in regard to the quantity, market price, or net value of the tonnage produced.

The tonnage tax was not employed by any state in 1915.³⁴ A tonnage tax was levied in Michigan from 1853 to 1891. The rate applied was fixed by the legislature and was changed from time to time as the finances of the State required and as the physical condition of the mines and the financial condition of the mining industry warranted. The tax was primarily a state tax and no attempt was made at graduation. That portion of the law which discriminated between ore smelted in the State and that shipped out of the State for treatment was declared unconstitutional in 1875, as being in restraint of interstate commerce.³⁵ Since the law has been repealed, there has been almost continually a demand for the enactment of a tonnage tax law. The State Constitution permits specific taxes but although the representatives of the mining districts constitute a minority of the State Legislature, tonnage tax bills have failed of enactment. In 1914 a movement was started to force legislative action by the "initiative" but when the facts concerning mine taxation in Michigan became generally known in the agricultural districts of the State, the movement lost force and in 1915 there was practically no support in the State Legislature for the tonnage tax measures.

In Minnesota a tonnage tax was employed from 1881 to 1897. In 1896 the law was declared unconstitutional and it was repealed by the Legislature in 1897. There was subsequently an effort to restore a tonnage tax system as the appraisal of mines by the local assessors was impractical. Since the appraisal of mines has been made under the supervision of the Tax Com-

³⁴Florida collects a graduated license tax from phosphate plants. The graduation is upon the basis of tonnage as follows: Plants of not more than 20 tons daily capacity, \$10 tax; 20 to 30 tons, \$15 tax; 35 to 50 tons, \$25 tax; 50 to 65 tons, \$40 tax; more than 65 tons capacity, \$75 tax. *Laws of Florida*, chap. 5597, sec. 8.

³⁵*Jackson Mining Co. v. Auditor General*, 32 Mich. 488, (1875).

mission there has been little sentiment in favor of a tonnage tax. It is recognized generally that in order to secure justice in Minnesota a tonnage tax should be graduated. In order to secure facts upon which such graduation might be based and then to apply this graduated rate would require as much labor and skill in appraisal as the system now in use.

Both Maryland and Pennsylvania formerly employed a tonnage tax on mineral products which tax was collected through the railroad carriers. The Pennsylvania Act of 1864 levying a tax of two cents on the product of mines, quarries, and clay-beds was declared unconstitutional in 1872.³⁶ The Maryland law was held unconstitutional in 1874.³⁷

In 1873 a special road tax was levied by townships in Pennsylvania at the rate of one and one-half cents per ton of ore hauled by teams.³⁸ The Pennsylvania franchise tax upon corporations was a tonnage tax and was in force from April 24, 1874 to July 1, 1881.³⁹

CORPORATION TAXES

Corporations may be taxed in three ways. "The first consists in subjecting corporations to the general property tax only, the second in imposing special taxes in addition to the general property tax, and the third in taxing selected classes of corporations by special methods solely for state purposes."⁴⁰

In summarizing the bases of corporation taxes Professor Seligman enumerates: (1) Value of the property; (2) cost of the property; (3) capital stock at par value; (4) capital stock at market value; (5) capital stock plus bonded debt at market value; (6) capital stock plus total debt, both funded and floating; (7) bonded debt or loans; (8) business transacted; (9) gross earnings; (10) dividends; (11) capital stock according to dividends; (12) net earnings; and (13) franchise.⁴¹

Other than the special methods of taxing all mines, no special method of taxation has been enacted applying to mining corporations as distinguished from other types of corporations. In certain states employing license taxes, licenses may be

required of mines or mining plants, as in Florida⁴² and Louisiana.⁴³

Many of the large mining companies are incorporated in states which do not rank among the important mineral producing states and are subject to taxation under the laws of the state in which they are incorporated as well as under the laws of the state in which they are operating.⁴⁴

STATE INCOME TAX

A state income tax is authorized by legislative enactment in Mississippi, North Carolina, Oklahoma, South Carolina, Virginia, and Wisconsin. In addition to the states noted taxation of income is permitted by the constitution of Arizona, California, New Mexico, Ohio, and Utah, but none of them is now taxing incomes.

Under the general property tax, Massachusetts taxes incomes in excess of \$2,000 derived from property not taxed. With the exception of Wisconsin, the taxes levied upon incomes are apparently directed at individuals, but the Wisconsin tax is levied upon corporations as well as individuals, firms and co-partnerships. The Wisconsin law⁴⁵ was enacted in 1911 and amended in 1913.

The rate levied upon the income of corporations is graduated as follows:

Two percent on the first \$1000 of taxable income or any part thereof, two percent on the second \$1000 or part, and increasing by one-half percent on each \$1000, to a maximum of six percent on all taxable income in excess of \$7,000.⁴⁶

The term "income" is defined to include "all royalties derived from mines",⁴⁷ and it is specified that "taxable income, rentals, royalties and gains or profit from the operation of a mine or quarry shall follow the situs of the property from which derived, and income from personal service and from land con-

⁴⁷*Ibid.*, sec. 1087-m-2.

tracts, mortgages, stocks, bonds, and securities shall follow the residence of the recipient."

In estimating the income from mines, a corporation is permitted to make deductions, "including a reasonable allowance for depreciation by use, wear, and tear of property from which income is derived and an allowance for depletion of ores and other natural deposits on the basis of their actual, original cost in cash or the equivalent of cash."⁴⁸ A similar deduction is permitted individuals owning mines. Depreciation is never allowed in excess of that actually recorded on the books of the corporation.

The dividends declared by a going corporation, including mining corporations, will be conclusively presumed for purposes of income taxation as against stockholders to be from net earnings or profits, so that it cannot be claimed, to avoid an income tax, that the dividends were really declared from the capital.^{48a}

Upon the rehearing in 1915, the foregoing ruling of the court was reaffirmed. Mr. Justice Barnes who dissented stated at length his concept of income and pointed out that dividends from mines are in a sense "gross income" if the word "income" may be applied at all. "The ore in the mine was a capital asset having a determinable tonnage value. Any profit made in the process of mining and marketing the ore was income. But the value of the ore in the mine was not income. The capital assets of the corporation were reduced to the extent of the value of that ore by taking it out. When the money received was distributed, the stockholders had money in lieu of an undivided interest in a quantity of iron ore equal in value to the money received." The change of one form of corporate assets into another is not in itself the production of income.^{48b}

A mining corporation, operating under a lease, was granted a deduction from its state income tax of \$16,173.58 for royalties paid but claimed that it was entitled to an additional deduction of \$65,000 for ore depletion during the year. The Supreme Court of Wisconsin held that a leasehold interest is not equivalent to ownership for purposes of income taxation and the deduction for royalties is the only deduction to which a mining lessee is entitled in respect to ore.^{48c}

The state of Connecticut has inaugurated "an income tax on corporations based upon the report to the federal government. The rate is two per cent upon the net taxable amount reported to the federal government."⁴⁹

The proposed equated income tax is discussed in Chapter VI.

TAX ON ROYALTIES OR LEASES

The practice of taxing income, as for example mining "royalties", has not been common in the United States. With the enactment and enforcement of income tax laws, the federal government will secure revenue from this source. In various states the income from mining leases is noted by the assessor who determines what the market value of the leasehold is on the basis of the returns. The holder of the lease is then assessed at this estimate and taxed at the regular property tax rate. Usually by the terms of mining leases in the United States, it is specified that the property owner shall pay all taxes.⁵⁰

As previously noted⁵¹ the license tax in Louisiana was interpreted by the courts to be a tax on the business of mining and, if the royalty was deducted before the tax upon the operator was figured, the owner of the land or mining right could not be forced to pay a license tax on the royalty as he is not in the mining business.⁵²

The Minnesota Supreme Court has held recently that iron ore royalties accruing to resident fee owners of St. Louis County mines are not taxable under the classification of "moneys and credits." In the opinion of the court royalties are rents and unaccrued rents are real estate. They are taxed under the laws by the taxation of real estate and not as personal property. They should therefore not be listed and taxed as "credits." This reverses the decision of the district court.⁵³

CHAPTER VI

THE SYSTEMS OF MINE TAXATION COMPARED

The various systems of mine taxation previously enumerated differ essentially in respect to the base upon which the rate is levied. In most of the states the same rate that is applied to all property, assessed under the general property tax, is applied to the value of mining property, to the value of output of the mine, or to the net proceeds of mines.¹ With a more or less uniform rate, it is, therefore, important to consider whether the base is a true measure of ability.

In the following section the principal points that will be discussed are: (a) Methods of determining the base and the rate; (b) the certainty and stability of public revenue from mines under the several systems; (c) the amount of the taxes paid during the life of a mine under the several systems; (d) the effect of taxation upon the method and the rate of development of mines; and (e) the systems as applied to unproductive mining property.

General property tax. Under the general property tax, mines are usually valued upon the same theory that other property is valued, namely, that ability to pay taxes is measured by the value of the property owned. The base that is determined by assessment and equalization is supposed to bear the proper ratio to other assessed values, whether the property be a mine, a house, or a farm, and all of these assessments are based on present value. Assuming it is intended that the burden of taxation shall be distributed upon all property in proportion to its present value and that all property will be valued upon the same basis and taxed at the same rate, the general property tax presents no greater evils when applied to mines than when applied to other property. The principal difficulty has been in the appraising of mines for taxation. Owing to the fact that the value of a mine changes from day to day as the quantity and the quality of the "ore in sight" change with the advance

¹The details of methods of appraisal will be considered later. *Infra* p. 153.

of the working faces and the removal of mineral, mine appraisal involves problems not found in the assessing of real estate of the ordinary type. These problems, however, are the same ones that mining engineers must deal with in determining the purchase price or the sale price of mining property. The changing conditions in many mines may require frequent inspection by the appraiser and the expense entailed may be entirely out of proportion to the public revenue derived. This difficulty of determining, without too great expense, a base which will result in justice to all taxpayers has been one of the most serious objections to the general property tax as applied to the taxation of mines.

Some of the state laws prescribe how property shall be assessed and the method by which the assessor shall arrive at an approved valuation. As an illustration, the laws of Pennsylvania prescribe that the assessors shall assess, rate, and value every subject of taxation according to the actual value thereof and at such rates and prices as the same would bring at a bona-fide sale after due notice.² Other states have similar enactments. Owing to the fact that sales of mines are not frequent it has become necessary for assessors to employ methods of mine valuation that have been used under other and somewhat different circumstances. In the anthracite fields of Pennsylvania the following methods have been proposed:

1. Valuation based upon sales.
2. Valuation based on foot-acres of coal remaining in the ground.
3. Valuation based on royalty rates.
4. Valuation based on capitalized estimated profits.³

According to the decisions of the Supreme Court of Pennsylvania, the sales-method is the only strictly legal one, but prices of coal lands have such a wide range owing to the location of the land, quality of the coal, etc., that the other methods enumerated have been used extensively by the assessors. The foot-acre method involves determining the total thickness of coal per acre remaining unmined. However, as it is practically impossible to determine the thickness and quality of coal in advance of working, the Supreme Court of Pennsylvania has declared

²*Laws of Pennsylvania*, 1841, Act 139.

³Norris, R. V. Taxation of coal lands. *Proceedings American Mining Congress*, 1913, XVI, 331.

that the foot-acre method is not a "proper measure" of the value of coal lands for the purpose of taxation.⁴

On the royalty basis the estimated tonnage of coal would be valued at the current royalty rate. To this practice the Supreme Court of Pennsylvania has objected in the following language: "Market value is its fair selling value for cash, not payable as royalty strung out through a long series of years, but payable at the time or as soon thereafter as the value could be determined. Such a method does not make allowance in undeveloped territory for the length of time coal may lay in the ground unmined, undeveloped, and unprofitable. It is impossible to reduce to a scientific basis and to mathematical precision the elements of value entering into the present selling price of a tract of coal land. The question is not what earning power coal lands may develop in the future, but what they are actually worth in the market at present."⁵

The method of capitalizing earnings has not been used in Pennsylvania. This method of valuation of property has been in use many years and has been emphasized in connection with mining by Mr. H. C. Hoover. "The cardinal principle of Hoover's system of valuation is simply that the value of a mine is a capitalization of future profits. Given the margin of profit in an ore, the amount of ore, and the time required to get the profit, the value is merely that profit as it will appear in a series of dividends discounted from the future date of payment."⁶

⁴229 Pa. 465, (1911).

⁵229 Pa. 470, (1911).

⁶Finlay, J. R. Valuation of Iron Mines. *Transactions American Institute of Mining Engineers*, 1913, XLV, 282. In order that the relation of taxes to the exhaustion of mines may be presented as forcibly as possible, a few of the most modern ideas of mining economics are introduced as notes at this point.

A mine has been defined as 'a limited deposit of valuable ore, and that to make the greatest profit from it requires that the deposit be worked out rapidly.' (Hoover, H. C. *Principles of Mining*, 142, New York, 1909.

"The main factor in this proposal is the time value of money; not only the money tied up in the investment, but of the money to be returned by the investment. It follows that the true interest of a mine owner is not to perpetuate an income, but to complete a job; not to prolong the life of his mine, but to shorten it by exhausting all profitable ore and getting the money into something else as soon as possible. Good economy, by Hoover's theory, demands that the ore reserves be ruthlessly slashed

The principle of capitalization of earnings assumes a definite output and definite earnings from a developed tonnage in the mine. It involves practically the same investigation as is required in the physical valuation of a mine. The physical valuation of a mine requires more than a listing of lands, buildings, equipment and tonnage and quality of material in reserve. It necessitates estimating the life of the property and the average annual earnings from the available data on the cost of production and the average price to be obtained for the product. The capitalization of these average annual earnings at an assumed rate of interest will give the present value of the mine.⁷

Both the method of physical valuation and that of capitalizing the earnings involve estimating the amount that shall be set aside for depreciation of the mine and of the equipment. These systems are well adapted to mines in which the total available tonnage of mineral may be known years in advance,—or completely when the mine is opened,—by drilling and by sampling. If no extensions of the mineral deposits are developed and no new deposits are opened, the value of the mine will decrease annually as the mineral is removed. A system of physical valuation or of capitalization of earnings allows properly for the depletion of the mineral reserves of the mine.

Assume that a particular mine, valuable for a deposit whose extent has been determined, is subject to taxation under the general property tax. During the first year the sum paid in taxes would be the largest in the history of the mine if the tax rate is maintained uniformly, for as the ore in the mine is worked out the tax burden on the mine would become lighter each succeeding year because the assessed value would be less. In order to raise annually the same amount by taxation, assuming that the value of other property remains constant, it would

by getting out the best ore first, in preference to poorer ore, there being no logical reason why any profit should be sacrificed in order to make a showing of stability." (Finlay, J. R. Mine valuation. *Engineering and Mining Journal*, 1912, XCIII, 1238).

Stability of income during a period of years has been, however, one of the ambitions of many enterprising and conservative mine operators. The fact remains nevertheless that the exhaustion of mines proceeds rapidly and inevitably, and the community in which mines are located must recognize the fact, that public revenue from mines may continue during a comparatively short period of time.

⁷Steele, H. Mine taxation, *Engineering and Mining Journal*, 1914, XCVII, 381.

be necessary to increase the rate on all property or, by equalization, to appraise all property higher. The continued decline in the value of the mine would thus gradually shift the tax burden upon other property until finally the mine would pay no taxes whatever.

If the finances of the property be managed judiciously the assets of the company, including the present value of the mine and of the sinking fund, will be practically and continually constant. The taxes paid upon the physical valuation of the mine may grow less from year to year as the mine is being worked out, but if the entire assets of the company are subject to taxation at the site of the mine, the total sum paid in taxes by the mining company may be maintained practically constant during the life of the mine. This latter condition however seldom prevails as the funds set aside for the redemption of the capital invested are frequently deposited or reinvested outside of the mining district and are subject to taxation where they are deposited or invested. Generally, then, it may be assumed that a mine with known mineral resources, operating with an uniform annual output, will pay a constantly decreasing sum for taxes if taxed under the general property tax and appraised upon a physical basis.

The taxes paid under the general property tax by a mine whose annual output, earnings, and life can be estimated approximately may be represented as a diminishing annuity through the period of production or life of the mine.⁸

Instead of the methods of valuation or assessment previously noted, the base may be determined by state law as some multiple or fraction (1) of the gross value of the output, or (2) of the gross earnings after certain specified deductions have been made, or (3) of the net earnings. Upon the base determined in this manner, the same rate may be applied as is levied on other property. In order to determine the suitability of each type of base, it will be well to consider whether justice will be secured among mines operating upon various kinds of mineral deposits as well as among different mines operating upon the same type of deposit.

⁸In comparing the tax burden of mines under the several systems it will be necessary to assume certain more or less theoretical conditions in order that the results under the several systems may be demonstrated. In each case the real measure of the public revenue from mines should be taken to be either the present valuation or the amount of all the taxes paid during the life of the mine.

If all mines produced minerals of the same net value per ton, the system of appraising upon the market value of the output would not work inequality among the mines; but it places upon the same basis gold mines, copper mines, iron mines, oil wells, etc., whose product annually may be of equal market value but whose earning power may differ widely. Similarly, a gold mine producing a large tonnage of low value and requiring a large capital investment, may be earning annually but a small profit while the gross value of the product may be the same as that of the product of a high grade mine with small investment. The assumption that ability may be measured justly by a tax on the gross value of output is entirely unwarranted. Table No. I is based upon statistics from the 13th Census, Volume XI, and shows the gross and the net value of the output of coal, precious metal, copper, iron, and lead mines and oil and gas wells of the United States for the year 1909.

TABLE NO. I.

STATISTICS OF MINES, SHOWING RATIO BETWEEN SURPLUS AND GROSS VALUE OF PRODUCT.

Product	Gross value	Expenses of operation	Surplus above expense of operation	Surplus in percent of gross value
Coal, anthracite.....	\$149,180,471	\$139,324,467	\$ 9,865,004	6.6
Coal, bituminous.....	427,962,464	395,907,026	32,055,438	7.49
Iron.....	106,947,082	74,071,830	32,875,252	30.74
Copper.....	134,616,987	107,679,312	26,937,675	20.01
Precious metals, deep mines.....	83,885,928	68,764,692	15,121,236	18.03
placers.....	10,237,252	6,810,482	3,426,770	33.47
Lead and zinc.....	31,363,094	24,453,299	6,909,795	22.03
Petroleum and natural gas.....	185,416,684	135,638,644	49,778,040	26.85

While the present value can not be estimated from the annual net earnings alone, yet an inspection of the table of gross value of output, operating expenses, and surplus above operating expenses shows that among the various divisions of the mineral industry there is a wide range in the ratio between gross value of product and surplus above operating expenses.

In the anthracite industry the surplus is 6.61 percent of the value of the gross output; in the bituminous coal, 7.49 percent; in the deep precious metal mines, 18.03 percent; in the copper, 20.01 percent; in the lead and zinc, 22.03 percent; in petroleum and natural gas wells, 26.85 percent; in iron mines, 30.74 percent; and in gold placers, 33.47 percent.

The iron mines of the United States produced ore which sold for about one-fourth as much as the bituminous coal mined, yet the surplus above operating expenses of the iron mines was practically the same as that of the bituminous coal mines. The operating expenses of the anthracite mines and of the oil and gas wells were practically the same, but the oil and gas wells had a surplus five times as great as the coal mines.

It would apparently be unfair to declare without further investigation that the value of the output of a mine should be taken as the true present value of the mine and be entered upon the tax rolls together with ordinary real estate and personal property which have been valued upon a sales basis. The present value of a mine is determined not by gross output but by net earnings throughout the life of the mine.

Between individual mines, as has been noted, there may be a great difference in operating costs. Two adjacent mines may produce the same volume of product of the same quality but the operating costs of the one may be much higher than those of the other. If the life of both mines is the same the present value of the one mine may greatly exceed the other on account of the difference in operating costs. There will thus be injustice in appraising mines simply at or in proportion to the value of the output.

The foregoing statements apply to producing mines. If a mine is not producing it would not be appraised at all on the output or on the earnings basis. A productive but non-profitable mine would be taxed on the basis of output but would be exempt if the basis is either net earnings or capitalized net earnings.

Non-productive mining property would be taxed only under the plan of physical valuation or appraisal upon the sales method. It has been claimed by some writers that the method of mine appraisal and the system of taxation may influence materially the method and rate of the development of the mine.⁹

⁹Zander, C. M. in *Proceedings of National Tax Association*, 1913, VII, 387.

This has been discussed particularly in connection with the general property tax when mines are valued upon a physical basis. The objection raised is that systematic development of the mine may open up large reserves of mineral which will not be removed from the ground for many years owing to the system of mining and the existence of sufficient developed mineral to maintain the current rate of production. If these new reserves are not mined for many years they may have but little present value. Their location may not warrant opening a new mine and they may be of little value to another operator owing to the cost of the separate shafts and the equipment which separate ownership would necessitate. If the mines and the mineral deposits are appraised on a scientific basis proper allowance is usually made for such contingencies. In a number of states, however, it has been held that such tonnage should be appraised upon the basis of average sales of mineral of equal quality.¹⁰

The essential value to the appraiser of information regarding developed mineral reserves is that it gives him a reliable basis for estimating the life of the mine. It has been held by some engineers that a mine may have too much ore developed if proper charges for the cost of development are made against each ton. Mr. Finlay has well emphasized the relatively greater importance of a small difference in the market price per unit of the product than of a difference of a few years in the life of a mine, assuming of course that the mineral deposit is of sufficient extent and value to return the capital investment. This applies to every kind of a mine except a gold mine. He cites an important mine earning over a million dollars a year, with an assured life of ten years and a possible life of twenty years. "If it lasts twenty years this mine will be worth, say \$12,000,000; if it lasts only ten years it will be worth \$7,500,000. If, however, the price of its ore falls eleven percent it will only be worth \$7,500,000 if it lasts the full twenty years. If, on the other hand the price of ore rises eleven percent, it will be worth well over \$10,000,000 with ten years life. This difference in price is no more than two men might readily disagree about; for instance, it is a difference about equal to that between 13.5 and 15 cent copper."¹¹

¹⁰Details regarding the classification of various grades of mineral reserves will be presented in Chapter VII.

¹¹Finlay, J. R. Mine Valuation. *Engineering and Mining Journal*, 1912, XCIII, 1238.

This same idea regarding the real future value of the mineral reserves has been forcefully emphasized by Mr. Norris in discussing the problems of valuation in the Pennsylvania anthracite fields.¹² Assuming that a company owns five tracts of coal land, each containing 2,000,000 tons of coal, to be worked, one tract at a time in sequence and at the rate of 100,000 tons per year, and assuming that this entire tonnage is appraised on the basis of the present royalty rate, each tract will have an assessed value of \$400,000 and will pay approximately eight thousand dollars annually in taxes. On a six percent basis the present value of each of the five tracts has been calculated and will be as follows:

	Start mining in year	Complete the min- ing in	Present value of royalties	Less pres- ent value of taxes	Net present value
First.....	0	20	\$344,100	\$ 58,880	\$285,220
Second.....	20	40	107,360	110,120	-2,760
Third.....	40	60	33,550	126,100	-92,550
Fourth.....	60	80	10,430	131,080	-120,650
Fifth.....	80	100	3,250	132,550	-129,300

According to these estimates the tract mined during the first twenty years will earn royalties having a present value of \$344,100. If the present value of the taxes, given as \$58,880, be deducted, the net present value is \$285,220. Estimates show by similar calculations that the present value of the royalties earned by the second tract is \$2,760 less than the present value of the taxes on this tract. The excess of the present value of the taxes over the present value of the royalties of the tract mined after the eightieth year is \$129,300.

The principal advantages claimed for the general property tax system as applied to mines are:

1. The public revenue secured in this manner does not vary much from year to year.

¹²Norris, R. V. Taxation of coal lands. *Proceedings American Mining Congress*, 1913, XVI, 331.

2. The cost of administration is not high for most types of mining property after an adequate system of appraisal has been established.

3. By adjusting the rate, considerable elasticity is possible.

4. All classes of mining property may be reached if the system is intelligently and forcibly administered.

5. The depreciation of mining property by the exhaustion of the mineral is properly recognized.

The most important disadvantages and objections raised against the system are:

1. The appraisal for taxation requires the services of technically trained men.

2. Certain types of property are difficult to appraise.

3. Certain assumptions must be made in many appraisals.

4. The expense of appraising certain types of property may be out of proportion to the value of the property and the revenue secured.

5. Mines in process of development and also unprofitable mines are taxed.

6. It may tend to hasten the mining of proven bodies of the best ore in order to shorten the period during which the ore is taxed.

7. It may restrain development.

Output taxes. It is assumed that by an output tax is meant a tax levied upon the gross value of the output at a rate different from the rate applied upon property appraised under the general property tax. Under this system the taxing district appropriates to itself a part of the gross income of a mine irrespective of the capital invested, of the operating expenses, of the net earnings, and of the life of the mine. Unless there is a graduated rate, each mine will pay taxes each year in proportion to the market value of the total product. It is evident that certain assumptions must be made by the officials who fix the rate that shall govern. This rate may be determined in several ways:

1. By requiring each industry to bear a certain proportion of the entire public expenses. In a certain state, for example, it is proposed that mining shall bear one-eighth of the tax burden. The apportioning of the tax burden among the industries and the interests of the State must be done more or less arbitrarily on the basis of capital invested, annual earnings, value of output, or some other basis upon which industries may be compared. Assuming that in some manner the amount to

be raised by taxing mines is known, and that the gross value of the annual output is known, the rate may be determined easily.

2. In the event that the tax burden has not been apportioned among the various industries, the tax rate may be fixed arbitrarily by law at a specified percentage of the gross value of the output. This procedure practically establishes a leasing system and differs from the system of taxing tonnage in principle in that the leasing rate or royalty is a percentage of the value of the output, rather than a specific amount per unit of quantity as is often the case in leasing.

3. Practically the only other method of determining the rate is by arbitrarily establishing a rate within the taxing district. This would be apt to cause inequality in the burden of taxation and the power to fix rates might be abused by local officials. As previously noted the output tax is not used extensively in the United States.¹³

Under the existing output tax, mines pay a specific percentage of the gross value of the output. In 1913, the Pennsylvania Legislature enacted a law providing for a tax of two and one-half percent upon the market value of each ton of anthracite. This tax is in addition to the general property tax.¹⁴ In South Carolina, mines are taxed upon the gross value of the output but at the same rate that property is taxed under the general property tax.¹⁵

If the output is maintained uniformly throughout the life of the mine, the tax would of course be uniform. All mines, having the same output in any year, would pay the same taxes irrespective of the capital invested, the net earnings, the life

¹³This method of taxation has been used extensively in Canada. Nova Scotia leases gold lands and collects two percent of the gross value of the output. In 1913 British Columbia levied two percent on all mineral products except coal. The gross value is the basis in this tax system. On producing mines yielding less than five thousand dollars a year there is granted a refund of half the tax, while placer mines yielding less than two thousand dollars are exempt entirely. Yukon Territory levied a tax of $2\frac{1}{2}$ percent on all gold shipped out of the Territory. The provinces of Canada have preferred taxing gross rather than net proceeds, fearing that the books would be "doctored" if the taxes were figured on the net. The mining companies would object to the inquisitorial powers of the tax assessor.

Metal mines in Mexico are taxed on the value of the output.

¹⁴*Pennsylvania Laws*, 1913, Act. 374. As to constitutionality see p. 68.

¹⁵*Code of South Carolina*, 1912, Title III, chap. XIV, par. 304.

of the mine, or the present value of the mine. Assuming that the rate is uniform and that the output of the mine is fairly regular from year to year, the public revenue would be uniform.

The system of taxing output is favored principally for the following reasons:

1. It is not difficult to administer if the tax law is specific.
2. It is economical as no appraisal of mines is necessary.
3. It offers little chance for tax dodging as the amount and value of the output can be determined readily.
4. Mines are taxed when they are producing, and it therefore is a convenient system for the mine operator.
5. If the tax is graduated the burden upon the poorer mines may be reduced and that upon the more profitable mines may be adjusted accordingly.

6. Taxes are collected during the entire period of production in proportion to the output and irrespective of the approach of a period of unproductiveness. Only the present is considered.

The following objections have been raised:

1. The revenue secured by such a system is uncertain in amount and may vary much from year to year.
2. Generally there is no discrimination between mines as to ability, for the gross value or volume of the output is only occasionally a measure of the value of the mining property.
3. The future or life of a mine is not considered.
4. Unproductive mines or lands held for speculation are not taxed.
5. Productive mines that are unprofitable and mines being developed are taxed.

Tonnage tax. On the tonnage basis there is a levy of a specific charge against every ton or unit of mineral produced. Most of the state constitutions will not permit the collection of specific taxes. Michigan,¹⁶ Minnesota,¹⁷ Maryland,¹⁸ and Pennsylvania¹⁹ have used the system. A tonnage tax is levied upon the coal produced in Canada.²⁰ During recent years there has

¹⁶*Supra*, p. 52.

¹⁷*Supra*, p. 54.

¹⁸In Maryland this was a tonnage tax on coal carried by railroads. See *State v. Cumberland & P. R. Co.*, 40 Md. 22, (1874).

¹⁹*Supra*, p. 66-67.

²⁰Nova Scotia collects ten cents a ton on all of the coal produced except that of one company which contracted to pay twelve cents for a period of 99 years. British Columbia levies a tax of ten cents per ton

been an agitation in Michigan to impose a tonnoge tax again instead of the general property tax.

A tax per unit of output is claimed by some to be a tax levied on the principle of ability. This would be true if all mines were producing at the same cost per unit of output, but this is never the case and the burden is greater upon the less profitable mines. The percentage of earnings per unit of product which goes into the taxes is therefore greater for the poorer mines than for the richer ones.

The determination of the rate, which makes the tax practically a royalty, is a problem which requires careful attention. In order to determine this rate, either there must be some effort to equalize the burden of taxation on mines as compared with other property, or the rate must be set arbitrarily at some figure which meets the general approval of the tax payers and of the voters of the district. Where the tonnage tax is used in Canada it is practically a royalty and approximates the royalty rate and no other taxes are paid by the mining companies on property used exclusively for mining purposes. In some provinces however the tonnage tax is levied in addition to the royalty paid to the Crown. In Michigan and Minnesota when the system was used the tonnage tax rate was much lower than the royalty rate. The title to the mineral lands is in individuals and corporations in Michigan and Minnesota, while in Canada the title to the mineral lands upon which the mines are operating is in the government.

In the accompanying table are shown the tonnage rates in Michigan and Minnesota when a tonnage tax was employed, and also the expenditure for taxes per unit of product under the general property tax.

<i>Michigan</i>	Tonnage tax	General prop- erty tax
Copper mines, per lb. copper in 1891.....	\$.000375	
Copper mines, per lb. copper in 1912.....		\$.003 to \$.006
Iron mines, per ton in 1891.....	.01	
Iron mines, per ton in 1909-1913.....		.1095

on coal and fifteen cents on coke, if produced from untaxed coal; previous to 1907 the rates were five and nine cents respectively. In Alberta and Saskatchewan there is a tax or royalty of five cents a ton on coal. (Morine, A. B. *Mining Laws of Canada*., chap. VIII. Toronto, 1909).

<i>Minnesota</i>	Tonnage tax	General prop- erty tax
Iron mines in 1896, per ton.....	\$.01	
Iron mines in 1914, per ton.....		\$.0566 ²¹
Iron mines in 1914, per ton.....		.23 ²²

It has been suggested that a graduated tonnage tax be employed. But the problem of graduating the rate would be in effect appraising the product as is now done in a number of states employing the general property tax.

The advantages claimed for the tonnage tax are briefly as follows:

1. Simplicity of administration and economy.
2. The taxpayers would know definitely in advance what taxes must be paid.
3. Only productive mines and mineral lands would be taxed.
4. The state would take a large share of the profits secured from mineral deposits.²³

It is urged that the system is not a good one because:

1. Volume of output is not often a measure of ability as mines producing a large tonnage may have the smallest profit per ton; conversely, mines having a small output may have a large profit per ton.
2. A fixed rate per ton may make mining unprofitable if the market price of the mineral product declines.
3. There is no tax upon non-producing mines and mineral lands held for speculative purposes.
4. The public revenue from such a tax is uncertain as it will vary directly with the tonnage, which may change from year to year.

Earnings tax. When a tax is levied on earnings it becomes necessary for the legislative body or for tax officials to determine what deductions from the value of the output shall be

²¹State taxes only.

²²Includes all taxes.

²³The Minnesota Tax Commission in 1908 recommended that a tonnage tax be employed instead of the general property tax. "Considerations of justice and sound fiscal policy make it desirable; in no other feasible way can the heritage and the diminishing value elements involved be recognized." (*First Biennial Report*, Minn. Tax Com., 1908, p. 224). By the "heritage element is meant the state's right to a share of the value of the earth's possessions found within the borders of the state." (*Ibid.*, p. 145).

permitted in calculating the net earnings. Unless stated otherwise, the term "earnings" will be understood to mean net earnings.

A number of the states employ a tax on earnings, the state laws attempting to define earnings so that the assessor shall have no difficulty in verifying the data filed. In most of the states in which a net earnings tax is used there has been considerable discussion in regard to the deductions which shall be allowed. In mine accounting, as will be noted later, it is now the customary practice with some of the best companies to charge all ordinary development to operating expenses. The term "permanent improvement" includes very little about a mine operated on this plan. Everything is immediately charged to expense unless the item is properly one which represents an unusual improvement, the cost of which may be distributed over a period of years.²⁴

However the net earnings tax as employed in the several states is practically a general property tax, for the mine is assessed at its net earnings or the full amount of the net earnings is arbitrarily taken to be the actual value of the mine and on this base the rate of the general property tax is applied. A true net earnings tax is rather a tax which like an income tax takes annually a fixed percentage of the income or earnings. Levying a tax on net earnings at the general property tax rate

²⁴A notable example of this type of improvement is the stripping of ore in an open-pit mine. Most of the "dead expense" is incurred at the beginning or in the early stages of the operations. When the waste material overlying the ore-body has been removed, the deadwork, corresponding more or less to the sinking of a shaft, is completed and every ton of ore subsequently mined should be charged with a portion of this preliminary expense. In the case of several large open-pit mines, which are still stripping waste, the claim has been made that the total cost of stripping should be deducted from the earnings during the year in which the stripping is done, and that taxes should be figured on the net above this development expense. On the books of the company however this cost of stripping is carried as a suspense account and against each ton of ore as it is mined there is charged its share of the entire development expense. The question at issue seems to be whether the state shall collect a larger share now or defer its claim until later. It is not a matter of tax-dodging but rather a postponement of taxes. The extent and the quality of the ore-body are assumed; the variables that might later affect the earnings, and therefore the taxes, are the future cost of mining and the market price of the metal produced.

is in effect actually appraising the mine to be worth only one year's earnings. The fallacy of this plan in its general application is evident.

If the earnings of a mine are maintained uniform throughout its life, the annual sum of taxes paid will be uniform, during the years immediately prior to the exhaustion of the mine as well as in the first years of production. The tax burden therefore would be distributed throughout the life of the mine.

The objections to the net earnings tax that have been presented are notably as follows:

1. The difficulty of determining what deductions shall be made from the gross earnings.

2. The necessity for more or less inquisitorial inspection of the accounts of the mine.

3. The fact that there may be little relation between the capital paid in and the earnings of a company.

4. Non-productive and unprofitable mines pay no tax whatever.

5. From the view point of the tax officials, there is the objection that the state revenue derived from mines in this way would not be nearly as uniform from year to year as when the general property tax is used, unless the earnings of the mines are uniform.

6. The rate would have to be high in order to collect from mines the same proportion of the earnings as is collected from real property under the general property tax.

In support of the net earnings tax, the following advantages may be noted:

1. As a rule, the taxing unit will secure more revenue from the mines, if the entire life of each mine is considered, than if mines are taxed under the general property tax. The assumption is made that under both systems the same taxes are collected the first year.

2. If depreciation has been properly provided for, and the earnings are uniform, the amount of taxes paid each year during the life of the mine will be uniform, although the value of the mine may be declining at a regular rate.

3. Physical valuation or appraisal is not necessary.

4. There is less expense for administration.

5. Development of mines is encouraged as the unprofitable and unproductive mines are exempt.

From the view point of the mine operator, this system is desirable for the following reason:

6. If the rate is maintained uniform, the taxes will be heaviest when the mine is most profitable and there will be no burden during the development period.²⁵

Income tax. As previously noted, the Federal Government and a few of the states levy a tax upon the income of individuals and of corporations. The essential difference between the so-called "net earnings" tax and an income tax is that every state employing the former levies the tax at the general property tax rate thus practically valuing a mine at one year's earnings, while under the income tax there is a fixed or graduated rate specified which applies only to income. As will be noted in Chapter IX, it has been urged that mines should be taxed upon income and at a rate graduated according to the earnings upon paid-in capital. This proposal contemplates also a definite consideration of the deferment of dividends until after a mine is developed.

The advantages claimed for an income tax as applied to mines are the same ones that apply to income taxation in general, but the following have the more specific application:

1. Income of mines is the true and only measure of ability.
2. The administrative problems have been simplified for the states by the enactment of the federal income tax law.
3. Mines would be taxed when productive, therefore the tax is convenient as compared with the general property tax.
4. There is no pressure or inducement tending to cause careless and wasteful mining.
5. Exploration and development are not impeded.

The objections raised against an income tax or an ad valo-

²⁵The system of mine taxation inaugurated by the Province of Ontario by the Act of 1907 is a good example of the net profits or earnings tax. "All mines which yield an annual profit above the exempted amount of ten thousand dollars pay a flat rate of three percent on such excess. In ascertaining the profits, the gross receipts, or value at the pit mouth, are taken and from this sum is deducted the cost of transportation of the output sold, if borne by the shipper, and actual working expenses including mine wages and salaries, cost of fuel, explosives, power, insurance, and sinking new shafts, and an allowance for depreciation of the plant,—not of the mine. The tax levied in any year is based upon the profits of the preceding year." (Ch. 9, 7 Edw. VII).

rem tax based on capitalization of net income have been summarized as follows:

"1. American property taxes are in general so high and take so large a part of the annual income that if converted into terms of income taxation they would appear excessive. Few legislatures could be persuaded to impose an income tax on mines equal to the share of the net income regularly taken from farms, railroads, and similar enterprises.

2. The property tax is imposed from year to year on idle property or property which for speculative purposes is held out of production, whereas the income tax applies only when the property is worked.

3. With the income tax, uncertainty and possible inadequacy of the tax are likely to result unless the minimum output is regulated by the state."²⁶

Equated income tax. Owing to the difficulty of appraising annually mines having a short life and those having little ore in sight, it has been proposed that typical mines be appraised carefully and the net earnings or income determined for the entire life of the mine; that the ratio between earnings and property value be determined; and that a factor be calculated so that the general property tax rate may be applied to earnings or income and the same tax burden be thereby applied to properties regularly appraised and to those whose income alone is known.²⁷ This would mean that if the general property tax rate is 3 percent and the factor is determined to be 2.4, then the rate applied to incomes of mines would be 7.2 percent.

The advantages claimed for this system of equating income with the value of property are as follows:

1. Ease of administration.
2. Mines are taxed upon actual and not prospective earnings.
3. Taxation according to ability is approximated.
4. Royalties are taxed at the source.
5. There is no effect on conservation of mineral resources and no penalty on development.

The disadvantages are:

²⁶Report of the Committee on Taxation of Mines and Mineral Lands, *Proceedings National Tax Association*, 1913, VII, 390.

²⁷Uglove, W. L. *Bulletin XLI, Wisconsin Geological and Natural History Survey*, 1914, p. 59.

1. The system is based upon the average life for a district or for a group of mines, and occasionally an individual mine may suffer or may escape its just share of taxes.

2. The revenue derived will fluctuate with the earnings.

3. Unprofitable and unproductive mines are not taxed. Unprofitable mines on a royalty basis are taxed.

4. Land held for speculative purposes is not taxed.²⁸

²⁸*Ibid.*, p. 64.

CHAPTER VII

PROBLEMS OF ADMINISTRATION

The administrative problems of mine taxation differ in a number of points from those of taxation of other kinds of property. Particular attention may be directed to the problem of appraisal of mineral properties, to mine accounting and depreciation of mines, and to the cost of administration.

APPRAISAL OF MINERAL PROPERTIES FOR TAXATION. As most of the states employ the general property tax and a number of the others tax the property of non-producing mines, the appraisal of mineral properties for taxation is a problem practically of national interest. In but few states, however, has the subject received the serious attention which its importance warrants. This may be due to several causes: (1) The failure to develop or apply a scientific system of appraisal of property in general throughout most of the states; (2) constitutional limitations upon the methods of assessment; and (3) the opposition of the various interests involved.

In Minnesota, Michigan, Wisconsin, Arizona, Colorado, Nevada, Utah, and Pennsylvania considerable attention has been given to the problem and in the first three there have been appraisals made which have gone a long way toward solving the problem.

In discussing the appraisal of mineral lands, Mr. H. M. Chance suggested that the purpose for which an appraisal of mineral property is desired will determine the choice of method or combination of methods to be used. Among the methods which have been applied are the following:¹

1. The value may be determined by adding to the cost of the land the cost of improvements, and a reasonable remuneration to the party which has successfully developed the property.

2. After the common-practice of real-estate appraisers, the value may be determined by the prices at which property of a

¹Chance, H. M. Appraisal of the value of mineral lands. *Transactions of American Institute of Mining Engineers*, 1904, XXXV, 347.

similar character in the immediate neighborhood has recently been sold.

3. A method elaborated by Mr. J. S. Harris several years ago for the purpose of appraising the value of coal-lands owned by the Philadelphia and Reading Coal and Iron Company has been adopted by many experts for general purposes. By this method the total workable coal in the ground is first determined and valued at a certain sum per ton, this estimate being based either upon what the coal would produce, if leased upon a royalty, or upon the profits of mining it. Using as a basis the rate of increase in production, as shown by past experience, the probable yearly increase of output is calculated, and for these figures the probable revenue is calculated for each year of the period during which the assumed output can be maintained, or until all the coal is mined. Then the probable future earnings of the land, either by royalty or through production, are capitalized at their present money value, by the usual formulas for deferred payments, at a certain assumed rate of discount. The present money-value of coal-land depends largely upon the time at which development is to be commenced, the time elapsing before maximum output is attained, and the time to be occupied in exhausting the tract,—the present money-value decreasing rapidly as any of these variables is increased.

4. The appraised value of the property may be taken as the capitalized value of the yearly earnings which it is estimated will result from the operation of the property at a certain yearly output maintained for a fixed term of years at an average profit per ton extending throughout the whole period, and not providing for any increased output beyond what may be already in sight.

5. The value may be based upon the actual net earnings allowing for such increases and improvements as seem warranted by industrial conditions, treating the property as a business investment and worth the price which the earnings justify, provided it be not greatly in excess of the appraisal value of the land, plant, and improvements as reached by other methods.²

²In commenting on these methods, Mr. Chance said: "The first method may be dismissed without serious consideration, because it is impossible to determine what would constitute a reasonable profit to the operator developing a tract of land, and, further, because this method ignores the value of the business that the operator has established and the enhancement of land-values due to the development of the property.

The second method is discarded for similar reasons, also because

The fifth method is now generally employed in valuing mining properties by representative engineers.³

In appraising mining property, other than improvements and broken ore or stored mineral product, it has been customary for tax officials to classify the various kinds of property as follows: productive mines, non-productive mines, mineral reserves, unexplored mineral lands, mining rights, and leaseholds. Many of the representative and the most important points in the appraisal of mineral properties for the purpose of taxation may be noted in connection with the methods of valuing productive or developed mines which methods will be discussed first. As suggested by Mr. Hoover,⁴ the field of valuation of productive mineral properties may well be treated in sections. In the following discussions an effort has been made to present data and methods in the following order: (a) copper, lead, zinc and precious metal mines; (b) iron mines; (c) coal mines; (d) gold placers; (e) petroleum and natural gas wells; and (f) mineral rights.

it fails to recognize the fact that the price paid for coal property is a measure only of the value placed upon it by the vendor, who, if not in a position to operate it, may be willing to part with it for much less than its real value. In buying from original owners coal operators rarely pay full prices, but almost invariably what they believe to be a small fractional part of the real value.

The third method is most valuable for the purpose for which it is used by Mr. Harris, namely, as a basis upon which reorganizations may be planned, and a new company financed. It may not be adapted for general use, because it is cumbersome, and also because it does not include allowances for the value of established trade and connections.

The fourth method is useful in a majority of cases as corroborative of valuations reached by the fifth method."

COPPER, LEAD, ZINC, AND PRECIOUS METAL MINES

It has been suggested that both positive and speculative factors must be considered in determining the value of a metal mine. The positive value or character of the ore as it is known to exist in the ground may be determined by an examination and the sampling of the mine and the metallurgical testing of the ore. The quantity of mineral product actually available must be determined by measurements made upon the blocks of ore exposed. The mining engineer in making an examination of a mine may find it necessary to cut samples from the solid ore in place every five or ten feet along the exposed faces of every block of ore. This work of taking the samples, together with the work of surveying the mine in order to determine the location of the points at which samples were taken and the volume of blocks sampled, followed by the task of assaying each sample may require the full time of several trained men for many days and may cost several thousand dollars for each large mine examined. It cost \$7,000 to sample one well-known mine, and it cost \$12,000 to do the same work in a neighboring property. This does not include the fee of the engineer in either instance.⁵ In appraising an operating mine for taxation it would usually be unnecessary for the mine valuer to do more than to check and verify the sampling which had previously been done. It has been held by some opponents of the ad valorem system of mine taxation that the expense even of checking the sampling of large precious metal mines will make the system prohibitive in those states in which there are many mines of this character.

There is also to be considered the question of developing, equipping, and operating the mine and this involves the variable of technical skill and managerial ability. Finally, there are the speculative elements of continuity and character of the orebody beyond the ore visible at the time of examination and the possibility of a change in the market price of the product for all except gold mines.⁶

Speculative features have entered in various ways into the appraisal of mines for taxation. In some states it has been urged that the interest rate used in valuing a mine should be as high as the rate that investors normally expect to receive from mining investments; others favor the practice of making

⁵Rickard, T. A. *Sampling and Estimation of Ore in a Mine*, p. 14.

⁶Hoover, *Principles of Mining*, p. 1.

percentage deductions for various factors of risk⁷ such as the following:

“1. The risk of continuity in metal contents beyond sampled faces.

2. The risk of continuity in volume through the blocks of ore estimated.

3. The risk of successful metallurgical treatment (due to changing character of the ore).

4. The risk of metal prices, in all but gold.

5. The risk of properly estimating costs.

6. The risk of the extension of the ore beyond exposures.

7. The risk of management.”⁸

It is to be assumed that in valuing mines for taxation the risk factor will be given the same weight as it is usually given by engineers in appraising mines for sale or purchase.

The basic factors in the valuation of a mine are (1) average market prices for the product; (2) average costs of mining and marketing the product; (3) the life of the mine, and (4) the interest and discount rate.⁹

With these data determined or given, the present worth of a mine producing annually a fixed tonnage of a uniform quality may be readily calculated from the following formula:¹⁰

$$\text{Present value} = \frac{100 \text{ p } A (z \text{ S })}{x \text{ z } (z \text{ S } + 100)}$$

A = number of tons in the deposit; x = number of years required to mine this tonnage; p = profit per ton; z = rate of return expected; d = rate + 1 at which the sinking-fund can safely be invested.

$$S = \frac{d (d^x - 1)}{d - 1}$$

With certain types of mines, as has been noted, the sampling and estimation of the ore-body may mean a difficult and expensive task which would be practically out of the question for the appraiser to undertake annually for each mine in the tax district.

⁷*Infra*, p. 191.

⁸Hoover, *op. cit.* p. 182.

⁹Finlay, J. R. *Cost of Mining*, p. 5.

¹⁰*Ibid.*, p. 16. See also Hoskold, H. D. Valuation of mines of definite average income. *Transactions of American Institute of Mining Engineers*, 1902, XXXIII, 777.

In the two types of metal mines, other than iron, which have been appraised on an ad valorem basis by state appraisers, no attempt has been made to sample the mines. In the Michigan native copper mines, sampling would be impractical. In the Wisconsin zinc district it has been customary to estimate ore reserves from plated drill holes, put down in exploring the deposit. Experienced mine operators having the records of the holes can estimate very closely the value of a deposit and the same data are available to the appraiser for the tax commission.¹¹

The problem then is rather one of verifying the data available, of checking tonnages, of verifying sales, prices, and costs, and of estimating profits. With a known life of the mine, the present worth may easily be calculated.

In appraising the short-lived mine or the mine whose development is generally not sufficient to warrant an estimation of life, many factors must be considered,—and these can be estimated only by the experienced appraiser who is familiar with the geology of the district.¹² Arizona was the first state to attempt an appraisal of precious metal mines, or mines carrying important quantities of precious metals as by-products.¹³

IRON MINES

The Minnesota, the Michigan, and the Wisconsin Tax Commissions have had considerable experience in appraising iron mines. The important features of the work of each commission will be presented later.¹⁴

The valuation of iron mines rests fundamentally upon the same basal factors as the valuation of gold, silver, copper, zinc, and lead mines,—namely, (1) average costs per unit of product, (2) average prices per unit of product, (3) average number of units produced annually, (4) life of the mine, and (5) rates of interest and discount. The economic conditions controlling the iron industry, and regularity and extent of iron-ore deposits, and the wider distribution of iron-ores have caused many appraisers to consider iron-ore deposits separately from those ores which carry commercial quantities of the precious metals.

¹¹Uglove, W. L. Methods of mine valuation and assessment. *Bulletin XLI, Wisconsin Geological and Natural History Survey*, 1914.

¹²This will be discussed later in considering the experience of the Wisconsin appraiser in the Platteville zinc district.

¹³*Infra*, p. 198.

¹⁴*Infra*, Minnesota, p. 175; Michigan, p. 194; Wisconsin, p. 185.

Eckel in discussing the valuation of iron-ore properties suggests¹⁵ that for such properties there may be three different bases on which the valuation may be placed: (1) Capitalization of smelting profits, (2) capitalization of royalties or mining profits, and (3) market or replacement valuation. In capitalizing the smelting profits, the same line of thought is followed as is followed in gold mining, namely, that the treatment and reduction of ores is incidental to mining and therefore for example, the profit of the reduction of the gold ores is simply a part of the profits of gold mining, defining mining in a comprehensive way. Similarly, iron smelting may be considered as a branch of the iron mining business. Logically, iron smelting stands in the same relation to iron mining as gold milling does to gold mining,—but the trade customs have been different. The “method of valuation which has been here suggested¹⁶ is clearly justifiable,¹⁷ but has not been adopted in the past.”

In summarizing the problems of iron-ore property valuation, Eckel emphasizes¹⁸ the importance of finding a market for the iron-ore of the particular chemical composition of the deposit to be valued. In a going concern the appraiser would have available the accounts of the company showing the actual prices received for ores and could estimate the value of the deposit or blocks of the deposit upon these records of sales.¹⁹

The interest and discount rate is of importance particularly in valuing deposits of iron ore or other minerals of such extent that the mines operating upon them will have a comparatively long life. It has been suggested that some mines may have too much “ore in sight.” This statement may apply to either of two conditions. The company may have bought lands or mineral rights in order to secure assured reserves, and the price paid for these reserves may at compound interest amount to so great a sum that by the time the ore is mined, no profit will result from the investment. Or, the company, upon lands previously owned, may

¹⁵Eckel, E. C. *Iron Ores*. The basal factors in ore valuation, p. 109.

¹⁶*Ibid.*, p. 110.

¹⁷It is interesting to note the complications that such a system of valuation might provoke if the State of Minnesota should attempt to tax iron-ore on the basis of the profits earned by the iron and steel plants located at Pittsburgh.

¹⁸*Ibid.*, p. 113.

¹⁹The question of composition of ores, marketability, etc., is of importance, however, in determining the prospective value of unproductive mines and mineral lands containing known tonnages of sampled ore.

make expenditures for driving development openings and thereby may open additional reserves; but the expenditure upon these new openings, when considered as an investment and charged with interest compounded, may amount to so great a sum by the time the ore is mined that no profit may result. It is evident therefore that the interest and discount rates and the carrying charge are important in estimating the present worth of extensive mineral deposits.

The determination of the carrying charge upon ore or other mineral in the ground has aroused much discussion particularly in the iron-mining and the coal-mining states. "The selling value of a natural agent—be it agricultural, an urban site, a developed mine—is a capitalization, at the current rate of interest, of the fixed income which accrues to its owner. It varies, therefore, inversely to the rate of interest."²⁰ In the Finlay appraisal of the iron mines of Michigan the rates used were six percent on the investment and four percent on the sinking-fund. In the so-called Hill ore lease four percent was taken as a basis for calculation. "Taking everything into consideration, it does not seem justifiable, in considering long-time ore calculations, to assume a carrying rate of less than six percent. It does not seem probable that under any ordinary conditions in the American money market, any steel company whatever could secure money at a lower rate if ore reserves were the only security offered."²¹ All things considered, we are not likely to under-estimate the matter much by assuming six percent as the minimum carrying charge or discount rate. Even at this rate the discounting effect is more than might casually be expected. If ore is being mined on a royalty basis of twenty-five cents per ton, the royalties for the tenth year of the lease can be given a present value of only fourteen cents per ton; while those to be earned in the fortieth year have a value now of only two and one-half cents a ton. In other words, a property which can not be worked out in forty or fifty years does not derive much additional present value from the ore still in the ground at the end of that time."²²

In commenting upon the method of valuation of iron mines used by Mr. J. R. Finlay, the importance of the assumption of the interest and discount rate was discussed at length by Mr.

²⁰Taussig, *Principles of Economics*, II, 97.

²¹In 1907 the Spanish-American Iron Company attempted to make a loan by a series of 6 percent bonds, secured by Cuban iron-ore deposits. These bonds were sold at 98 1/2. Eckel, *op. cit.*, p. 177.

²²*Ibid.*, p. 177.

E. E. White.²³ He cited various authorities to show that in addition to a fund for the redemption of capital, the conservative investor generally expects a return of not less than ten per cent upon mining investments. He suggested that Mr. Finlay's method of valuing the Lake Superior iron mines might be successfully used if the five factors should be determined as follows:

"1. The average cost of production at lower ports for five years, plus or minus the difference in cost per ton of taxes due to such revaluation.

2. The estimated ore reserves; ore based on diamond drilling to be estimated very conservatively.

3. The average production per year for the last five years, if the mine has been equipped to produce actively for that length of time; otherwise, for the number of years during which it has been so equipped.

4. The average selling price at lower lake ports for 18 years.

5. The present value of a \$1 per year dividend based upon a 10 per cent return on the investment and capital returned in ten years of operation by investment of an annual sum at 3 per cent. This would mean 12 to 15 years from the beginning of development before capital would be replaced."

COAL MINES AND LANDS

The valuation of coal mines has received much attention from mining engineers, but the appraisal of coal mines for the purpose of taxation has not received the attention of taxing officials to the same extent that metal mines have in the Lake Superior region. However, the coal mines of Michigan were appraised for taxation in 1911 and the assessment of anthracite mines in Pennsylvania and of bituminous coal mines in Virginia and West Virginia has provoked much discussion and some litigation. In most of these coal mining districts the problem of coal mine valuation has been almost inseparably identified with the valuation of lands and leaseholds.

A survey of the field of valuation as applied to coal lands has been made by the United States Geological Survey in connection with the examination and classification of the mineral lands of the public domain. The Geological Survey investigated the royalty value, the sale price, the bonding value, and the

assessed value of coal lands in the United States in 1910.²⁴ It was found that county assessors commonly assess only developed coal lands and these upon the coal actually being worked. Where the coal land is most valuable the method of assessment has usually been worked out with much care.

Table No. 2 gives data from selected points, including the range of assessment of coal in developed properties (exclusive of improvements) down to assessments on undeveloped lands off railroads and of small or unknown value, the ratio between the assessed and the assumed real value, and the assumed real value as estimated from the assessments.²⁵

In 1914, Mr. H. M. Chance collected data²⁶ upon the county assessments of coal lands in the leading coal mining states as shown in Table No. 3.

Iowa.....	"Undeveloped lands not assessed as coal lands."	10.00 to 30.00	6.00 to 25.00
Kansas.....	"Supposed to be at its market value."	20.00 to 60.00	5.00 to 10.00
Kentucky.....	"Assessors often adopt statement of owners as to value." (Data not complete).	2.00 to 15.00	1.00 to 4.00
Ohio.....	"Attempt to approximate value." "More guesswork than anything else." "Actual values tried to be ascertained."	20.00 to 80.00	10.00 to 20.00
Pennsylvania	Methods vary greatly. (Bituminous region only).	10.00 to 900.00	5.00 to 50.00
Tennessee.....	Data incomplete	20.00	3.00
Utah.....	Data incomplete.	20.00	10.00
Virginia.....	At fair market value as per Act of March 7, 1912.	100.00 to 500.00	1.00 to 8.00
W. Virginia....	"Supposed to be at voluntary sale value."	6.00 to 180.00	3.00 to 15.00
Wyoming.....	"On net value of output." (Data incomplete).	20.00 to 30.00	20.00

The investigation made by Mr. Chance discloses the fact that few of the states have adopted uniform methods applying to all parts of the state. In general, four methods of assessment of coal lands have been attempted or suggested.²⁷

First: Valuations based on actual sales.

Second: Valuations based on foot-acres of coal remaining in the ground or remaining available.

Third: Valuations based on royalty values.

Fourth: Valuations based on capitalized estimated profits.²⁸

The application of these methods in Pennsylvania will be considered later.²⁹

In discussing these methods in a general way, Mr. Norris concludes that "none of the suggested or attempted methods has resulted, or can result, in an equitable valuation, fair and just to both the public and the owners of coal land."³⁰ On the other hand, Mr. Chance in appraising the coal mines of Michigan for taxation in 1911 used as a "logical method" the following procedure: The present value of the proved and developed coal tonnage was determined, using as a basis an assumed present money value of a ton of coal in the ground existing under average mining conditions. The present value of undeveloped coal was assumed to be a definite percentage of the present value of developed coal. Various factors were adopted by which the assumed base was reduced in order to allow for local irregularities, risks, etc. A valuation for a property was thus determined, it being practically a capitalization of estimated profits during the life of the mine.

As previously noted the United States Geological Survey has placed a valuation upon the coal lands of the public domain.³¹ Various factors have been considered and definite rules have been formulated from which may be determined the price to be charged for lands containing coal of a certain quality and thickness. Deductions are allowed according to the variations in

²⁷Norris, R. V. Appraisal of coal land for taxation. *Bulletin, American Institute of Mining Engineers*, April, 1915, No. 100, p. 868.

²⁸These same methods have been used in principle at least in some of the metal mining districts.

thickness, inclination of bed, depth below the surface, and proximity to railroads.³²

"In certain counties in western Pennsylvania, a fixed value of coal land for a certain location is placed upon a certain amount of coal land in connection with a going operation, and all acreage in excess of this fixed amount, which is called operating coal, is assessed at a lower value, usually about one-half to three-fourths of the value attached to the operating coal, and each year the amount of coal actually mined during the year is deducted from the cheaper or back coal."^{32a}

GOLD PLACERS

Only a few states have important placer deposits and little literature is available to show the actual methods employed by assessors in appraising mines operating upon such deposits. The

methods of valuing alluvial gold deposits employed by mining engineers have been described in various works upon gold dredging and placer mining and in numerous articles in the technical press.³³

The valuation of gold placers that have been drilled thoroughly may be made upon the same basis as the valuation of other types of mineral properties, notably by determining the present value of the profits which may be expected from working the deposit. Experienced operators have had opportunity to compare the recovery of gold with the reports of drillers and various factors have been determined for different kinds of dredging ground, as, for example, one factor for compact gravel, and others for medium gravel, for loose gravel, and for loose gravel and sand with much water. Factors may be applied for the gross amount of gold recoverable under general working conditions, although many of the largest operators report that it is impossible to give any fixed percentage to offset the various conditions of operation.³⁴ "The life of dredging propositions differs from that of vein mines in that dredging propositions can be closely figured, and, unlike the latter industry where the profit in sight is figured as a guarantee for the return of only a part of the capital invested, the redemption of the cost of the property and equipment must be allowed for during the life in sight, which is usually determined by having the dredge equipment of sufficient capacity to turn over the ground in ten years, as the life of a dredge with a wooden hull is generally figured at this length of time."³⁵ The rate of interest, after proper allowance for the

sinking-fund has been made, is generally taken at a minimum of ten percent.

In California mines are appraised on an ad valorem basis.

PETROLEUM AND NATURAL GAS WELLS

The appraisal of oil and gas wells has offered many difficulties to assessors in the states appraising and taxing mineral properties upon an ad valorem basis.

The important oil producing states in 1912 and 1913 were Oklahoma, California, Illinois, West Virginia, Pennsylvania, Ohio, Texas, Louisiana, and Indiana. The states leading in the production of natural gas were West Virginia, Pennsylvania, Ohio, Oklahoma, Kansas, Louisiana, and California. With the exception of Oklahoma all of these states tax mines and oil and gas wells under the general property tax. Except for the reports published by the Tax Commission of West Virginia there are available but few data upon the experience of the officers of oil and gas states in taxing oil and gas wells. The logical and practically the only method of valuing an oil and gas well or property is upon production and profits. Definite instructions on valuation of oil wells are given to the local assessors in but ten states.

It has been said that few of the oil-producers appreciate what the real cost of production is.³⁶ Obviously, it is essential that producers should know what is really income if property is to be appraised on the basis of earnings and if Federal taxes are to be collected on income.^{36a}

In discussing "depreciation as applied to oil properties," Mr. P. W. Henry has presented valuable data on the cost of production and has demonstrated what items may properly be taken into account in estimating the depreciation of oil properties.³⁷

Data used in the study of the subject were based upon estimates of the United States Geological Survey for the State of California as a whole. Considering the constant annual increase in production and the danger from water intrusion, it seemed prudent to adopt a life of 25 years for the field. A

³⁶*Requa*, M. I. Present conditions in the California oil-fields. *Transactions of American Institute of Mining Engineers*, 1911, XLIII, 841.

^{36a}As noted in Chapters III and IV, Louisiana imposes a license tax upon the business of mining. The tax is based upon the gross value of the product of wells and mines.

³⁷Henry, P. W. Depreciation as applied to oil properties. *Bulletin, American Institute of Mining Engineers*, 1915, No. 97, p. 31.

depreciation rate of 4 percent per annum was used for the oil lands. For individual wells the life may be shorter and the rate would necessarily be correspondingly higher. An average life of all wells drilled, including dry wells, is suggested as 10 years. In case the land should be valuable for other purposes after the oil has been exhausted, a depreciation rate corresponding to the actual depreciation due to the exhausting of the oil should be used. The depreciation rate on equipment is figured at 7 percent. Summing up the depreciation charges which were calculated for particular operations, Mr. Henry concludes that the following charges are appropriate:

	Per barrel
Depreciation of oil lands (royalty).....	\$0.555 to \$0.110
Depreciation on field equipment.....	0.029 to 0.052
Depreciation on wells and appurtenances...	0.052 to 0.071
Total depreciation	\$0.136 to \$0.233

These figures were presented with the idea, not of supplying absolute data that could be applied in general, but rather in order to show what effect a "proper charge for depreciation has upon the cost of producing oil in a state where, during the past few years, prices at the well have ranged from \$.30 to \$.85 per barrel."³⁸

In addition to this charge for depreciation, allowance must also be made for renewals and repairs. The actual cost of California oil is shown by the following statement:

	Per barrel
Pumping	\$0.04 to \$0.05
Miscellaneous field expense	0.04 to 0.06
Repairs and renewals.....	0.04 to 0.05
General expense	0.02 to 0.04
Total direct cost	\$0.14 to \$0.20
Depreciation as above	0.14 to 0.23
Total cost ³⁹	\$0.28 to \$0.43

³⁸*Ibid.*, p. 28.

³⁹The foregoing data have been introduced in order to give a basis for comparison with other fields. It should be noted particularly that these data are based on a 4 percent rate of depreciation for oil lands, 7 percent for equipment, and 10 percent on the cost of individual wells and appurtenances.

Mr. William Forstner in discussing the valuation of oil lands⁴⁰ divides oil properties into eight classes as follows:

1. Properties with producing wells and surrounded by producing properties.
2. Properties surrounded by producing properties, but not developed.
3. Properties with producing wells, but only partly surrounded by producing territory.
4. Properties partly surrounded by producing territory, and undeveloped.
5. Properties with producing wells, but at a short distance from other producing territory.
6. Properties at a short distance from producing territory, but undeveloped.
7. Properties with producing wells, but at a great distance from other producing territory.
8. Properties at a great distance from other producing territory and undeveloped.

In the opinion of Mr. Forstner, the yearly returns of California properties in the several classes should be at the following rates:

Class 1, 16 to 25 percent; Class 2, 23 to 28 percent; Class 3, 18 to 27 percent; Class 4, 24 to 33½ percent; Class 5, 24½ to 33 percent; Class 6, 30 to 42 percent; Class 7, 31 to 40½ percent; Class 8, no estimate made as the property can not be valued.

Data on the Illinois field have been collected by Mr. R. S. Blatchley.⁴¹ The cost of drilling wells⁴² and of operating leases⁴³ furnishes a basis for valuation of Illinois oil properties. The cost of operating the lease is almost negligible when considered in connection with the earning power of the wells. In some of the counties the operating profits have been low, while the Clark county fields "have been among the most profitable in the world because of the low cost of development and the high returns. The essential feature in operating is to overcome first cost and the interest on the investment. In the shallow fields eight wells steadily making two and even one barrel per day are found to be profitable."⁴⁴ Statistics are given to show that the profits

⁴¹Blatchley, R. S. The oil fields of Crawford and Lawrence counties. *Bulletin 22, Illinois Geological Survey*, 1913.

⁴²*Ibid.*, pp. 153, 160.

⁴³*Ibid.*, p. 161.

⁴⁴*Ibid.*, p. 161.

resulting to one company operating 100 wells will give an average net income of \$3,000 per month. The valuation of producing wells is considered on a strictly commercial and conservative basis. Purchasing companies gauge the output of a well for ten days and determine the average daily yield. The price per barrel for a producing lease is from \$400 to \$500. A 40-acre lease producing 500 barrels per day would sell at approximately \$200,000 and with a reasonable decline in production should pay for itself in about three years.⁴⁵ The total yield per acre of oil fields varies widely; some have produced only 500 barrels or less per acre while others have produced from 10,000 to 50,000 barrels.⁴⁶ The reports do not indicate what amounts may properly be charged off to depreciation.

In West Virginia the appraisal of oil wells is made by the local assessors acting under instructions from the State Tax Commissioner. "The royalty interest in a well-settled producing well is worth in the market for commercial purposes \$1250 for each barrel of oil produced every 24 hours; while the working interest is worth \$1000 for each barrel produced in 24 hours."⁴⁷

From the foregoing it is evident that oil properties are bought and sold on the basis of production and it seems logical to presume that oil properties can be appraised on much the same basis.

MINERAL RIGHTS

The subject of mineral rights has been discussed at some length under several of the foregoing headings, but it may be well to review in general the experience of the states and to note the present tendencies in valuing this type of property. In general the coal-mining right, when not owned by the owner of the surface, is assessed as the property of the individual or corporation claiming ownership. In a number of the states exceptions to this rule are made when there is no definite knowledge of the quantity and quality of the coal. In several of the ore mining states laws have been enacted which prescribe that mineral rights shall be taxed to the owner.

⁴⁵*Ibid.*, p. 162.

⁴⁶According to the U. S. Census Reports, 1910, Vol. XI, the oil fields of Illinois had a surplus above operating expenses amounting to \$5,491,869 in 1909. Out of this surplus taxes amounting to \$72,107 were paid, or 1.32 percent of the surplus.

⁴⁷*Instructions to Assessors*, 1910, West Virginia, pp. 8, 15, 16.

In many instances the mineral rights of unexplored lands have been reserved when the surface has been sold. When Mr. Finlay appraised the mining property in Michigan he made the statement that no means were found for placing a value on unexplored iron ore formation. "If we could compare an area of fresh iron lands with another area that had been explored and had proved to contain a certain tonnage of iron ore, we might then rationally assume that the undeveloped land would reduce somewhat in the same proportion, but it has been impossible to make any such comparison."⁴⁸

Professor A. C. Lane in discussing the valuation of mineral rights points out that there is a demand for mineral rights, that they are bought and sold, and that they can be appraised on this basis. He discussed the problem carefully for the Lake Superior copper district and concluded "that mineral rights have a value which is but a small fraction of the selling price. It is possible to determine an average value for them which may be called the taxation value. The actual return to a given small holder of a small area of mineral rights will depend partly upon its accessibility but largely upon the ability of himself or his neighbors to hustle and get his tract developed sooner than the tract of someone else. This personal ability is a thing which the state can not foresee nor tax."⁴⁹

In discussing the taxation of leaseholds, Mr. Chance calls attention to the great difference among the states in the taxation of leaseholds. "The equity of a lessee in the coal is not assessed as taxable property in Alabama, Arkansas, Colorado, Kansas, Missouri, Utah, and Virginia. Such equity may be assessed as taxable property in Illinois, Iowa, Kentucky, Tennessee, Ohio, Pennsylvania, West Virginia, and Wyoming, but the practice is not uniform throughout any one of these states; in the aggregate only a comparatively small number of leaseholds being assessed for taxation. The whole value of the coal held under lease is usually assessed to the owner of the property, the equity of the lessee being disregarded."⁵⁰

VALUATION OF MINES AS AFFECTED BY TAXES

Many mining engineers have assumed that the effect of all taxes upon mining property is to reduce the earning power of the property and likewise the value of the property. In general this assumption is correct but there are times when the burden of the tax may be shifted to the consumer of the mineral product and the earning power of the mine would not be reduced directly on account of the tax.^{50a}

The general presumption is that taxes upon mines are levied for the sole purpose of raising the necessary public revenue. It is usually argued:

1. If the tax is general or continuing or permanent, the burden will fall upon the consumer. A tax which affects mines nationally will usually result in an increased price for mineral products (except gold) and the margin of profit will not be reduced materially if the demand for the product is not affected by the higher prices.

2. If the tax is local or statewide it can not be shifted for the product of the mine must be sold in competition with that of competing mines in other states. These competing mines in other states may not be taxed as heavily and are in a position to continue selling their product at the same price. Therefore the tax levied within state boundaries can not be shifted easily.

3. If a tax varies with the proceeds or with the quality of the product it can not be shifted. Such a tax falls more heavily upon rich mines than upon poor ones and, as it can not be shifted, it obviously reduces the amount available for the payment of dividends.

4. If the tax falls upon a product which is monopolized the effect is not definite as it may be difficult for the producer to increase the price of the product, particularly when the consumer may substitute something else for the product which is taxed. The effect of a tax on anthracite would undoubtedly mean that in certain localities and industries less anthracite would be burned and more bituminous coal. Generally, however, the consumer pays the tax, the amount available for the payment of dividends is not lessened, and the value of the mine is not reduced.

^{50a}For a general discussion of this problem in taxation see:

Adams, H. C. *Science of Finance*. Book II, chapter IV.

Seligman, E. R. A. *Shifting and Incidence of Taxation*.

Plehn, C. C. *Introduction to Public Finance*. Chapter X.

Professor Seligman says that a tax is paid by the man who owns the property at the time the tax is first imposed. To illustrate this he cites the levying of a tax amounting to \$.25 an acre on land that has been valued at \$20 an acre. This land has been valued at \$20 on account of earnings of \$2 per acre, money at 10 percent. The tax will reduce the earnings to \$1.75 per acre and the value of the land will fall immediately to \$17.50. There has been no change in the productiveness of the land but the government has automatically become a joint owner to the extent of the capitalized value of the tax, namely \$2.50. He continues that in a sense the owner of the property at the time the tax is first levied pays the tax for all time, although there is an annual payment of taxes during the continuance of the tax upon this property.

The usual effect of a tax is to reduce the level of profit for taxes generally come out of income if they can not be shifted. The value of mining property is reduced as taxes become heavier and unproductive property may have no present value due to the facts that the annual taxes at compound interest may amount to more than the earnings.

An investigation of the problem of interests and discounts in connection with the mining of ore bodies subject to annual taxation led Mr. W. L. Uglow to the conclusion that "an ore body held in reserve for $33\frac{1}{3}$ years has no present value if taxes are levied at three percent. The effect of this tax factor may even be great enough to impede the development of a reserve for more than five or six years in advance, or to cause the wasteful depletion of ore that would normally last longer than that period."⁵¹

In discussing the taxation item in the valuation of mines, Mr. R. B. Brinsmade presents⁵² the following:

Let V = value or present worth of a \$1 dividend to be assessed by taxation.

a = annuity to be paid to sinking-fund.

r = rate of interest earned on sinking-fund.

R = rate of interest earned on investment.

t = current rate of taxation.

n = number of years dividend is to be earned.

⁵¹Uglow, W. L. Methods of mine valuation and assessment. *Wisconsin Geological and Natural History Survey*, 1915, Bul. XLI, 46.

⁵²Brinsmade, R. B. Valuation of iron mines. *Transactions of American Institute of Mining Engineers*, 1913, XLV, 324.

$$\text{Then by suggested system } \$1 = (R + t) V + a \quad (\text{A})$$

$$\text{and from algebra } a = \frac{V r}{(1 + r)^n - 1} \quad (\text{B})$$

Substitute in (A) the value of a in (B) and

$$1 = (R + t) V + \frac{V r}{(1 + r)^n - 1} \quad (\text{C})$$

Solving (C) for V ,

$$V = \frac{1}{R + t + \frac{r}{(1 + r)^n - 1}} \quad (\text{D})$$

EXPERIENCE OF MINING STATES

The experience of several of the important mining states will be considered in detail in order to present adequately the problems of appraisal of the various types of mineral properties.

Minnesota

When the system of taxing iron mines upon the tonnage of ore produced was discontinued in Minnesota in 1897, the general property tax was again made effective and it became necessary to appraise the mines. Two distinct types of mines are operated in this state, namely, open-pits and mines worked through shafts. Until 1907, practically the same methods of appraisal that had been used in other mining states were used in Minnesota but there prevailed generally a sentiment that the mines were not paying their full share of taxes. The Minnesota Tax Commission was created in 1907 and a resolution of the State Legislature passed in April, 1907, called the attention of the Commission to the need of a revision of the assessment of the mines and mineral lands,—the resolution advising that the total assessed value should be raised to approximately \$225,000,000. During the session of the legislature a committee was appointed to “investigate the best methods of taxing the iron ore properties.” This committee reported that the ore properties were assessed at only one-fifth the amount at which they should be assessed. The Tax Commission collected all data available concerning the iron mines and prospects, at that time numbering 2,116, and proceeded to classify the mines upon the technical and commercial data that were secured. After this

classification had been made, the mines and lands were valued and the operators were given an opportunity to show at a public hearing why the increased valuations should not be entered upon the tax rolls.⁵³

The full plan and the method of classification and valuation were presented at this meeting. The factors taken into consideration in the valuation were: (1) Geological conditions; (2) difficulty of mining; (3) character of the ore; and (4) character of mining rights.

Classification and Rates in 1908. Mining properties were divided into two grand groups,—operating mines and prospects. The operating mines were classed in five groups, as follows:⁵⁴

Class I. (a) Properties where mining was comparatively inexpensive and the ore high grade.

(b) Properties where mining was comparatively easy and the ore of lower grade.

Class II. Properties where mining was somewhat more difficult and the mining cost greater than in the case of Class I, and the ore of mixed grade.

Class III. Underground properties where the expense of mining was comparatively low for that kind of mining and the ore of high grade.

Class IV. Underground or milling-pit properties of distinctly second grade, determined by a higher cost of mining and lower grade of ore than in the case of Class III.

Class V. Mines of inferior character where expenses of operated were high.

Prospects were divided into four classes or groups, as follows:

Class I. Lands that had been drilled and test-pitted, and where stripping of the overburden had been carried on. In other words, where the property was about to become a mine.

Class II. Lands that had been drilled and test-pitted and ore found in some abundance.

Class III. Unexplored lands near good mining properties.

Class IV. Lands that had not been explored but were in the well known ore-belt.

The rates of valuation per ton in the ground were fixed as shown in Table No. 4.

⁵³Minnesota Tax Commission, *First Biennial Report*, 1908, p. 119.

⁵⁴*Ibid.*, p. 120.

TABLE NO. 4.
MINNESOTA IRON ORE RATES IN 1908.

	Class I	Class II	Class III	Class IV	Class V
Operating mines (a).....	33c	27c	23c	19c	14c
“ “ (b).....	30c				
Prospects.....	15c	10c	8c	\$3 to \$50 per acre	

“In the determination of the rates, the Commission was confronted by a number of serious problems,—how to get a taxable valuation of iron properties that would be fair to the state and to the owners of the properties. The rates arrived at were in the main determined by several factors:

(1) The difference between the cost of mining and the average price of iron ore during the preceding three years.

(2) By the present worth of the difference for a period of twenty years on a basis of four percent rate of interest.

(3) By the percentage of the assessed valuation of real property in the state to the full value of such property.

The classes referred to and the rates established for them were determined as far as possible by the differences between mines in cost of operation, difficulty of mining, and grade of ore.

No better method of valuation was suggested at the hearing of mine owners, and it was the best that the commission could do under the ad valorem requirements of the law.”⁵⁵

The report of the commission shows that there was a disposition on the part of the mining companies to give all help that would lead to a fair valuation.

During subsequent years some improved methods have been used. The Second Biennial Report of the Commission gives further details,⁵⁶ describing how the estimate of tonnage was made and how the ore was graded.

Prior to 1909, the classification of iron ore and the tonnage estimates were based largely on blue prints of explorations furnished by owners, lessees, or operators of the various properties. It was deemed advisable to have the exploration, computations, and estimates verified by disinterested and competent engineers. In June, 1909, the faculty of the Mining Department of the

⁵⁵*Ibid.*, p. 122.

⁵⁶*Second Biennial Report*, 1910, p. 56. See also *Third Biennial Report*, 1912, p. 65.

University of Minnesota entered upon this work for the Tax Commission and has continued the work to date.

Classification and Rates in 1909. In 1909 a rearrangement of classes was made, the various mineral properties being classified as active mines, reserves, and sub-reserves.⁵⁷ "Reserves are described as mineral properties that have been drilled and tested, and upon which measurable tonnages of merchantable ore are known to exist but have not been developed, because of remoteness from or lack of transportation facilities, market conditions, or other causes that would render the present operation unprofitable. Sub-reserves are a secondary class of reserves and are valued at a lower rate than either of the other classes."⁵⁸

The classes and rates in 1909 are shown in Table No. 5.

TABLE NO. 5.
MINNESOTA IRON ORE RATES IN 1909.

	Active mines cents	Reserves cents	Sub- reserves cents
Class 1.....	33	21	15
Class 2.....	30	18	10
Class 3.....	27	15	-----
Class 4.....	23	11	-----
Class 5.....	19	10	-----
Class 6.....	14	8	-----

The only change made in the active mines in the new classification was in the class number, 1-b being eliminated, and the classes numbered from 1 to 6 consecutively. Considerable change, however, was made in the reserve classes, five new classes being added and a substantial increase in rates made in two other classes. It was felt that certain reserves adjacent to active

⁵⁷*Second Biennial Report, 1910, p. 80.* "In addition to reserves there is a class of unexplored lands that from surrounding deposits and other circumstances justify the belief that they contain merchantable ore. In such cases the assessed value is usually placed at a much higher figure than adjoining lands that are known to be outside of the mineral belt, or on lands that have been drilled and no merchantable ore found on them."—*Ibid.*, p. 85.

⁵⁸*Third Biennial Report, 1912, p. 85.*

mines and shortly to become shipping mines should take a higher rate than the one first imposed by the commission.⁵⁹

After the work of re-classification had been completed in 1910 and new tonnages and reserves had been added to the assessment rolls, the commission made a general increase of 5 percent on all mines, reserves, and other lands in the ore belt. The rates after this increase had been applied are given in Table No. 6.

TABLE NO. 6.
MINNESOTA IRON ORE RATES IN 1910.

	Active mines cents	Reserves cents	Sub- reserves cents
Class 1.....	34.65	22.05	15.75
Class 2.....	31.50	18.90	10.50
Class 3.....	28.35	15.75	
Class 4.....	24.15	11.55	
Class 5.....	19.95	10.50	
Class 6.....	14.70	8.40	

Rates in 1911 and 1912. The tonnage rates in 1911 were the same as in 1910 for the same classes. In 1912 a general increase of 5 percent was made. The 1912 rates are given in Table No. 7.

Classification and Rates in 1914. The standard classification employed in 1914, as given in the Tax Commission Report for 1914,⁶¹ follows:

Active Mine Tonnage

Class

1. Open pit, low mining cost, high grade ore.
2. Open pit, moderate mining cost, medium grade ore.
3. Open pit, high mining cost, mixed grade ore.
4. Underground, low mining cost, high grade ore.

⁵⁹*Ibid.*, p. 80.

⁶⁰Applied to shipping mines, Itasca county.

⁶¹*Fourth Biennial Report*, chap. VI and VII.

5. Underground, moderate mining cost, medium grade ore.
6. Underground, high mining cost, excess rock and water, mixed grade ore.

Reserve Tonnage

Class

1. Undeveloped reserve ore of active mines, class 1.
2. Undeveloped reserve ore of active mines, class 2.
3. Undeveloped reserve ore of active mines, class 3.
4. Partially developed and stripped, high grade ore.
5. Partially developed, not stripped, medium grade ore.
6. Partially developed not stripped, mixed grade ore.

TABLE No. 7.

MINNESOTA IRON ORE RATES IN 1912.

	Active mines cents	Reserves cents	Sub- reserves cents
Class 1.....	36.3825	23.1525	16.5375
Class 2.....	33.0750	19.8450	11.0250
Class 3.....	29.7675	16.5375	
Class 4.....	25.3575	12.1275	
Class 5.....	20.9475	11.0250	
Class 6 ⁶⁰	16.5375	8.82	
Class 7.....	15.4350		
Class 8.....	14.70		

In 1907 classes 3, 5, and 6 were numbered 1, 2, and 3 and corresponded with standards described in classes 4, 5, and 6. Class 3 is also a sub-reserve rate for class 1 and for active mines of wash ore. Class 5 is also a sub-reserve rate for class 3.

General rate increases of 5 percent have been made in 1910, 1912, and 1914. These represent a total increase over the 1907 valuation of 15.75 percent.

The assessed rates per ton which have been used since the appraisal has been made by the Tax Commission have been as shown in Table 8.

TABLE No. 8.
CLASSIFIED ASSESSED RATES PER TON.

Class	Rates per ton 1907-1908		Rates per ton 1909		Rates per ton 1910-1911		Rates per ton 1912-1913		Rates per ton 1914	
	Mine cents	Reserve cents	Mine cents	Reserve cents	Mine cents	Reserve cents	Mine cents	Reserve cents	Mine cents	Reserve cents
1.....	33	15	33	21	34.65	22.05	36.38	23.15	38.20	24.31
2.....	30	10	30	18	31.50	18.90	33.08	19.85	34.73	20.84
3.....	27	8	27	15	28.35	15.75	29.77	16.54	31.26	17.36
4.....	23		23	11	24.15	11.55	25.36	12.13	26.63	12.73
5.....	19		19	10	19.95	10.50	20.95	11.03	21.99	11.58
6.....	14		14	8	14.70	8.40	15.44	8.82	16.21	9.26

This classification is adjusted so that proper allowances can be made for the following conditions:

The classification provides automatic rate adjustments to meet: (1) the greater value of the better grades, and the shorter periods of discount for active mine ore exhaustion, or both; (2) the various grades and the longer periods of discount for the reserves of active mines and of all other reserves; (3) the proper rate to apply, as a reserve passes into the active or operating mine class.

The effect of this method of valuation is exhibited by the data in Table No. 9.

TABLE No. 9.
ASSESSED VALUE OF PROPERTY IN MINNESOTA.

	1906		1912	
	Assessed value	Percent total	Assessed value	Percent total
All real property.....	\$ 751,887,611			
Acre property.....	392,979,128	52.27	\$ 492,172,962	42.78
City and village property	294,422,074	39.16	398,802,305	34.67
Mineral property.....	64,486,409	8.57	259,418,277	22.55

Factors in Present Valuation. The essential and controlling features of this method of valuation seem to be based upon the following:

1. Gross tonnage of ore in the state.
2. Total annual output.
3. Average rate of exhaustion.
4. Classification of mines and reserves, according to quality of ore, marketability, present cost of mining, and average profit per ton.
5. On the basis that money is worth 4 percent and that the average period of exhaustion for all the mines of the state would be 20 years, the present worth of the ore was determined for each class.
6. Upon this base equalization has been effected, first, between individual mines, on account of any important local

conditions which were not made factors in the classifications; and later between the mines and other property.

According to the laws now in force property is assessed as follows:

Class I. Iron ore whether mined or unmined shall constitute class one (1) and shall be valued and assessed at fifty (50) percent of its true and full value. If unmined, it shall be assessed with and as a part of the real estate in which it is located, but at the rate aforesaid. The real estate in which iron ore is located, other than the ore, shall be classified and assessed in accordance with the provisions of classes three (3) and four (4) as the case may be. In assessing any tract or lot of real estate in which iron ore is known to exist the assessable value of the ore exclusive of the land in which it is located, and the assessable value of the land exclusive of the ore shall be determined and set down separately and the aggregate of the two shall be assessed against the tract or lot. *Minnesota Laws of 1913*, chap. 483.

Class II. Household goods shall be valued and assessed at 25 percent of the full and true value.

Class III. Live stock, stocks of merchandise, tools, machinery, and all unplatted real estate, except as provided in Class I, shall be valued and assessed at thirty-three and one-third percent of the true and full value thereof.

Class IV. All property not included in the three preceding classes shall be valued and assessed at forty percent of the full and true value.

The reason given for appraising mined and unmined ore at 50 cents on the dollar while other property is valued at a lower rate is that property in general continues the object of taxation, but mines and the ores they produce are taxed for a relatively short time.⁶² By some it is claimed that this is practically a method of taxing unearned increment, or what might be called a "natural increment".

The legislature of 1905 enacted the following law:

⁶²There is, therefore, a question whether taxes are levied, as claimed, simply upon profits; apparently there is an effort made to take for the state a share in the proceeds of the ore. The ultimate effect of such practice will undoubtedly be to reduce the value, to the mine operator and land owner, of ore in the ground, on account of this increased expenditure for taxes.

“That whenever any mineral, gas, coal, oil, or other similar interests in real estate are owned separately and apart from and independently of the rights and interests owned in the surface of such real estate, such mineral, gas, coal, oil, or other similar interests may be assessed and taxed separately from such surface rights and interests in said real estate, and may be sold for taxes in the same manner and with the same effect as other interests in real estate are sold for taxes.”⁶³

Owing to the decisions of the courts in *Washburn v. Gregory Company*,⁶⁴ it is recommended by the Tax Commission⁶⁵ that the legislature change the present law in the preceding paragraph, and “provide that an assessment on any land by its ordinary description shall be deemed to cover all mineral reservations. If the legislature should deem it wise to change the law as above indicated it should also make a provision that in case the owner of the surface or the owner of the mineral rights asked to have them separately assessed his request should be complied with.”

Engineering Field Work. The appraisal as carried on at present through the Mining Department of the University of Minnesota meets with the hearty co-operation of the mining companies and the complete records of prospecting and development, as well as data on costs, analysis, and prices of ore are available for the use of the engineers of the Tax Commission. The drill records and other data of ore development are checked as far as possible and the tonnages are determined by the engineers. Properties are inspected from time to time and as frequently as developments of new ore-bodies and exhaustion of old ones indicate important changes in a mine. The tonnages are classified and the mining companies have an opportunity to file a protest against both the tonnage and the classification.⁶⁶ The rate for each class is determined by the Tax Commission and each mine is then appraised at half the amount resulting from adding together the value of the ore in each class figured at the rates for that class.⁶⁷

⁶³*General Statutes*, 1913, sec. 1973.

⁶⁴125 Minn. 491.

⁶⁵*Fourth Biennial Report*, 1914, p. 152.

⁶⁶In 1914 there were but eleven applications for reduction in the assessment of mineral properties and these were all of minor importance. (*Ibid.*, p. 84).

⁶⁷The rates have been increased 5 percent three times since the first appraisal; this represents a total increase of 15 3/4 per cent over the

Cost of Appraisal. The cost of the appraisal by the engineers is comparatively small when the gross value of the properties appraised is considered. At the present time the engineers are not making any analyses of ores as there is sufficient checking of analyses at the mine, at the docks, and at the iron furnaces. The engineers do not investigate titles as this is done by other employees of the commission. The entire expense of the engineering work together with a pro rata share of the entire expense of the Tax Commission is approximately \$14,000. The assessed valuation of the iron ore of the state in 1913 was \$256,676,686 and the total taxes paid by the mining companies amounted to \$6,258,291. This represents an expenditure of \$.0000545 per \$1000 appraised and \$.00224 per \$1000 of taxes collected.

Michigan

FINLAY APPRAISAL. For a number of years following 1891, the year in which the tonnage tax was repealed, there was considerable dissatisfaction on the part of tax-payers, particularly the owners of farm lands, with the results of the assessment of the mineral properties in Michigan.⁶⁸ The work done in Minnesota in appraising the iron ore mines and lands attracted attention and in 1911 the Michigan legislature instructed the State Tax Commission to secure competent technical assistance and make a complete appraisal of all the mines of the state. The time allotted for doing the work was short but a comprehensive report was submitted which laid the foundation for a systematic procedure for appraising the mines of the state. In Minnesota there were only iron mines to appraise, while in Michigan there were iron, copper, coal, salt, and gypsum mines as well as quarries. These latter, however, the appraiser did not consider advisable to classify as "mines" and limited his

1907 valuation. The instructions now are that mining property shall be valued at 50 cents on the dollar. Formerly it was estimated that property was appraised at 43 cents on the dollar; a 15 3/4 percent increase on this basis would mean 6.77 cents which would raise the basis for mines to 49.77 cents on the dollar. It is evident that the new law will make little change in the results of the appraisal of mines.

⁶⁸The following data will illustrate the reason for this dissatisfaction:

A mine was listed by the assessors, on 1/3 valuation	\$ 50,000.00
Cash paid in by stockholders	1,200,000.00
Company's estimate of real estate, plant, equipment	807,334.95
Market value of stock	300,000.00
Gross earnings for year	178,727.53

report to the copper, iron, and coal mines. As the mines that were appraised included some types distinct from those valued by the Minnesota Tax Commission, the appraiser's report will be considered in some detail. The appraiser endeavored to determine the "value of the mines to the permanent owner for the production of minerals"⁶⁹ and did not consider the market value of the stock of companies, insisting that speculative value should not enter into a conservative appraisal.

Factors in Valuation. The valuation was based on three factors,—average cost of production, average prices, and an estimate of the future period of production. Average costs of product and average prices of product were determined by experience but the trend of future prices was considered. "The life of the mine is based partly on developed ore and partly upon an assumption of continuance of known ore bodies beyond the present bottom levels of the mines. The assumption of continuance is based mainly upon the extent to which the continuity of the deposits has been proved for the district and for the type to which the mine belongs. The future value of a series of dividends is reduced to a present value by the annuity method; that is, a sum is calculated upon which the series of dividends shall pay 5 percent interest and also provide each year a sinking-fund installment which, invested each year at 4 percent interest, and added to prior installments similarly invested and reinvested, will equal the sum taken. This sum is the amount which an investor can afford to pay for the property." On this basis no present value was given to unprofitable mines. Likewise unproductive property could not be assessed on this basis.

In appraising the copper mines, the market value of mining stock was not considered nor the equipment of the mines, but simply the earning power and the life of each mine. In order to determine the value of the mines, the data of costs and production for five years were collected together with the prospective tonnage and content of rock from unmined areas.⁷⁰ Only nine copper mining companies paid dividends from 1905 to 1910; the record of twelve mines was such that they could be

⁶⁹Finlay, J. R. *Appraisal of Mining Properties of Michigan*. p. 10.

⁷⁰From the production to date, an estimate for such mine was made to determine the output of mineral per acre. Allowing a factor for decrease in value with depth, the probable output from the unmined areas was determined.

classed as probably profitable in the future. All of the other mines were appraised at zero on account of their records of cost of production. Attempts to determine an acreage value for unproductive mines and undeveloped lands were not successful. According to the appraiser it seemed "ridiculous to place a valuation upon lands which have no showing at all when costly operations upon lands that have considerable showings of copper have not proved those showings to have any value, but, on the contrary, in most cases have proved them not to have any value."⁷¹

Mr. Finlay discussed at some length the value of iron ore, the possible effect upon Michigan iron-mining of foreign competition, and the effect of taking off the tariff on manufactured iron and steel. He concluded that "the iron ore market will continue in the future on substantially the same course it has pursued in the past; that the demand is sure to increase, and that prices are more likely to be higher than they are to be lower than the average of the past seven years."⁷² Attention was called to the fact that many iron mines operate upon leased lands and pay a royalty per ton of iron ore mined. Such royalties may be considered from the viewpoint of the mining operator as an expense; from the viewpoint of the state they represent a net profit of the iron mining business.

On the basis of iron ore reserves and records of costs and profits, it was estimated that productions and earnings could be continued on the iron ranges on the same basis for sixteen years, and probably a longer period. The estimates of ore reserves were based on (a) ore found in drill-holes, (b) ore reported by companies as being in sight above the bottom levels of the mines, and (c) an additional amount of ore added on the judgment of the appraisers based upon the conditions on the bottom levels. In some of the districts extensive drilling made it possible to estimate the extent of the ore-bodies with sufficient accuracy for such an appraisal. The following paragraph from the discussion of the valuation of the Menominee Range indicates the manner in which generalizations as to the continuity of the ore-bodies of the districts were made.

⁷¹*Ibid.*, p. 32.

⁷²*Ibid.*, p. 37.

“The total amount of ore accounted for above the 1,160 foot level is 50,645,807 tons. This means that the average horizontal area of the ore-bodies has been in the past approximately 440,000 square feet. If we assume that this area is normal for the 580 foot level and that for the 1,160 foot level the area is only 263,000 square feet, we get a diminution of approximately 180,000 square feet in 600 feet. This means that each additional 100 feet in depth means a diminution of area of 30,000 square feet. On this basis we might assume that the ore would vanish at a depth of 1,900 feet. This assumption would leave us below the present bottoms approximately 9,000,000 tons.”⁷³ “A continuation of life (of a mine at the assumed rate of production) beyond 20 years adds to the present value very slowly, and wherever the ore supply is sufficient to maintain output for even 15 years, it is not worth while to be critical about the amount of addition that might be made.”⁷⁴

The problem of determining the length of the period from which average operating costs and average market prices shall be determined has aroused considerable discussion. In Great Britain this has been fixed by law.⁷⁵

Mines which are being exhausted rapidly and whose output and value are declining rapidly would obviously benefit by being assessed on a three-years' average. One effect of the five-years' average period is that Mr. Finlay determined the average price of copper for the period of twenty years and found that

⁷³*Ibid.*, p. 51.

⁷⁴*Ibid.*, p. 57.

⁷⁵The Income Tax Act of 1842 specified that collieries, in common with other mines, shall be assessed on the full gain of one year, or an average of the five preceding years, but if, from some unavoidable cause, any mine has been decreased and is decreasing in the annual value, so that a five-years' average will not give a fair and just estimate of the annual value, such annual value can be computed on the actual amount of profits for the preceding year, subject to the usual abatement, on account of diminution of duty within the current year; and if any mine shall have wholly failed, the assessment can be wholly discharged. (*Transactions of Institute of Mining Engineers*, 1914, XXIX, 93).

By the Act of 1866, mines were transferred to the schedule for property assessed on the three years' average. Quarries were transferred from the class of property assessed on a one-year basis to the class on the three-year basis. However, mines are generally appraised on the average of five years' returns.

there has been a gradual increase in the price. He also considered the average over ten-year periods and came to the conclusion that the trend was upward. The average for the last ten-year period was 14.702 cents per pound, and he used 14 cents as the average price in his valuation. For most of the mines the average cost was figured on a five-year basis.

In estimating the price of iron ore, the average quotations for standard ores for a period of seven years were taken; this average, however, differed but little from the average for five years. In determining the probable cost of mining iron ore the average cost for the period of five years preceding was taken and allowance made for any expected increase or decrease in operating expenses. To illustrate the method of calculation used in determining the present value of the iron mines the following summary of data (Table No. 10) for the five-year period for District I is given.⁷⁶ Similar data were compiled for the other districts.

As a result of the Finlay appraisal there followed considerable discussion and many protests were made by the iron mining interests. The officers of the Michigan Tax Commission arranged for hearings of the complaints of the mining interests and a number of changes were made in the valuations of the appraiser before they were placed upon the assessor's lists.⁷⁷

MICHIGAN SYSTEM OF APPRAISAL. Since 1911, the Tax Commission has had technical assistance in appraising the iron mines and, beginning with 1913, the State Geologist has been Mine Appraiser for the Tax Commission.

In order to show the essential characteristics of the methods at present in use by the Michigan Geological Survey, it may not be inappropriate to point out specifically the points in which departures have been made from the Finlay appraisal of 1911.

(1) The Finlay method followed more or less rigid rules while the present method is comparatively elastic.

(2) The interest rate now used is 6 percent on both capital and redemption fund, while Mr. Finlay used 5 and 4 percent respectively.

⁷⁶Finlay, *op. cit.*, p. 61.

⁷⁷Mr. Finlay valued the iron mines of the four counties at \$119,485,000; the supervisors had appraised the same mines at \$19,623,508; the Tax Commission adopted the figures \$85,567,500. Mr. Finlay's figures for the copper mines were not placed on the tax roll in any of the counties.

TABLE NO. 10.
DISTRICT NO. 1.
GOGEBIC COUNTY, MICHIGAN.

	Totals	Per ton
Number of mines and explorations reported	20	
Wages and salaries paid.....	\$16,632,296.40	
General expenses (not including taxes).....	\$ 1,558,705.93	\$.098
Construction, development and explorations.....	4,083,864.20	.260
Mining expense.....	21,207,105.10	1.355
Total cost at mine.....	\$26,849,675.23	1.72
Rail freights paid.....	6,002,288.37	.40
Lake freights paid.....	10,585,921.64	.71
Commissions paid.....	695,520.57	.046
Total expense.....	\$44,133,405.81	2.876 ⁷⁸ F. O. B. Cleveland
Total tons sold.....15,183,842		
Total tons shipped.....15,393,642		
Total tons mined.....15,711,053		
Receipts from sale of ore.....	65,694,536.07	
Total operating profit of 12 mines.....	21,944,683.57	
Taxes.....	992,272.42	
Proportion taxes to operating profits (%).....	4.55	
Royalties.....	5,960,403.65	
Profit to companies (12 mines).....	15,212,854.39	
Total profits 12 mines including royalties.....	20,957,419.53	
Total loss to three mines (Exploration and development properties not included).....	678,579.85	
Total tonnage reported in sight.....	17,354,100	
Tons added by appraiser.....	25,645,900	
Total tonnage expected.....	43,000,000	
Average yearly value (expected) per ton.....	\$ 4.22	
Average cost per ton expected F. O. B. Cleve- land.....	2.87 ⁷⁹	
Average profit per ton expected.....	1.35	
Annual tonnage expected.....	2,875,000	
Present value of mines.....	\$41,560,000.00	

⁷⁸The average cost per ton includes mines worked at a loss.

⁷⁹The expected cost per ton is only for mines expected to work at a profit.

(3) At present in the valuation of undeveloped or unproductive mines when earnings will be deferred, proper allowance is made.

(4) The Finlay valuation did not include ore in stock piles. At present such ore is included in the valuation.

(5) Mr. Finlay did not appraise unprofitable operating properties. These are now valued according to the judgment of the appraiser because the mine is supposed to be worth something or otherwise it would not be operated.

(6) Mr. Finlay appraised for taxation on the basis of value to the owner. The present method attempts to determine the value on the market.

(7) With the higher rate of interest now used, hazard rates or "cuts" are applied to the various factors according to the judgment of the appraiser. These hazards vary with the mine. This has been found preferable to a sliding scale of interest.

(8) Mr. Finlay figured on future prices of the product. The present Michigan method is based on the prices and profits for an average of the last five years. Mining costs are figured in about the same manner.

Capital Account. Capital account is not allowed in the cost sheets of the mining companies as the appraiser considers this in a uniform manner in valuing all the mines. Taxes are allowed as an item of cost but royalties are not allowed.

Stock Piles. Mined and unmined ore are now treated practically alike, although the mined ore is classed as personalty. The rate on real estate and personal property is the same so it is immaterial to the mining company whether the ore is taxed in the stock pile or in the mine provided it is not subjected to double taxation. On December 31, the total amount of ore in the mines and on the stock pile is determined. On April 2 following, a report of the ore in the stock pile is filed and any increase in the tonnage reported stocked April 2, as compared with the tonnage of December 31, is deducted from the tonnage in the mine December 31, so that the mine is taxed on the total tonnage of December 31.

Inspection. Mines are not classified or grouped except in a general way in counties or districts for the purpose of comparison and equalization when the properties are of the same

character. Mines are inspected annually. There were in all 132 valuations in 1914.⁸⁰

Copper mines. The copper mines were included in the Finlay valuation, but have not been appraised since. It is apparently the opinion of most of the interested parties that the copper mines have generally been entered upon the tax rolls at more than their present value. Local officials have requested the Tax Commission to appraise these mines and it seems probable that when the mines are operating under normal conditions a careful appraisal will be made. The Finlay appraisal returned the mines at \$69,000,000, but these figures were not used. In 1916 the mines were rated by the local assessors and boards at \$80,000,000. In general, the copper mines of the Lake Superior district have been appraised on the basis of the current market quotations of copper stocks. The equalization for 1914 was based on the stock quotations for April 13, 1914. Producing dividend-paying mines were valued at 80.5 percent of the stock valuation; producing but non-dividend-paying mines, at 67 percent; non-producing and non-dividend-paying mines at 53.6 percent. It was found that the dividend-paying mines were returning on an average 7.31 percent in the market value of the stock.

For 1916 the valuation was based upon the average stock quotation throughout the year. The closing bid price every Monday was used in determining the average for the year ending the second Tuesday in April, 1916. For the year mentioned the producing dividend-paying mines were appraised at 66 percent of the average quotation, the producing non-dividend-paying mines at 55 percent, and the non-producing properties at 44 percent.

Coal and Other Mines. At the present time the appraiser of mines does not place a value upon the coal mines, salt plants, and other mineral properties. The figures submitted by the appraiser in 1911 for the coal mines have not been placed upon the tax roll. The practice of the local assessors is to value the plant, but generally the coal rights are not assessed.

Mineral Lands and Prospects. Mineral lands are no longer classified and valued by the commission as it has been found impractical to apply the classification from year to year to lands whose mineral content is merely speculative. The prob-

⁸⁰There were no protests by any mining company against the valuations for 1914.

lem is left in the hands of the local officials and the State Tax Commission intervenes only on request and in specified instances when protests are made by owners of speculative mineral lands against valuations made by local assessors and boards of review.

Plant. Surface plant and improvements used exclusively for mining purposes are not taxed as in this system of valuation no value is attached to them. Only those improvements which are directly connected with the mining operations are exempt; stores, houses, hospitals, etc., are taxed. A mine power-plant furnishing power only to the mine of the owner is not taxed. In the case of a mine power-plant located outside of the taxing district in which the mine is located, the power-plant is taxed as a power-plant where it is located, but the valuation of the mine in the other district is reduced by the amount at which the power-plant is valued. In this way the mine operator pays no more taxes than if the power-plant were located contiguous to the mine. A mine whose power-plant sells power is permitted to charge itself for power at the custom rate, but the power-plant is then taxed as if it were not owned by the mine.

Royalties. Royalties are not taxed except that they are included in profits and taxed to the operators.⁸¹

Local Assessments. The local taxing units in the iron mining districts use the valuation of the tax commission whenever such a valuation is made. When the local officials do not use the commission's valuation, the commission may ask for a review. In one instance this was done and the proper figures were thus insisted upon in spite of the apparent unwillingness of the local officials.

Cost of Appraisal. The expense of the annual appraisal of the iron mines of Michigan including the pro rata expense of administration of the Michigan Geological Survey is approximately eight thousand dollars. The valuation of these mines January 1, 1914, was \$92,090,349. In 1913 the valuation was \$82,534,221 and the mines paid taxes amounting to \$1,579,124.13. This makes the cost of appraisal \$0.005067 per \$1000 of taxes collected and \$0.000097 per \$1000 appraised. It should be noted that this is the cost of appraisal of individual mines which are inspected annually.

⁸¹According to the Michigan laws of 1891 all annuities and royalties are taxed as personal property. (*Laws of Michigan*, 1891, Act No. 200).

Wisconsin

Profiting by the experience of Minnesota and Michigan, Wisconsin, acting through the Tax Commission, has provided for the appraisal of the mineral properties of the State by the State Geological Survey. As previously noted two widely different types of properties are being operated, namely, the iron mines and the zinc mines.

IRON MINES. The iron mines produce only two percent of the Lake Superior iron ore, so that the task of appraising the iron mines is a small one when compared with the work in Minnesota and Michigan. There are five operating iron mines on the Gogebic Range, three on the Menominee, two on the Baraboo, and two at Mayville. The first state appraisal of mines for taxation was made in 1912, the methods employed being somewhat similar to those in use in Michigan. Owing to the small number of operating iron mines no classification has been employed as each mine is appraised as nearly as possible upon its present value.

At first in estimating the value of a mine on the basis of earnings and life, the interest rate was taken at 5 percent; it is now taken at 6 percent. The sinking-fund is figured on a 4 percent basis. The various hazards of mining are considered and deductions of from 10 to 15 percent may be made if conditions justify. The Wisconsin Tax Commission in 1912 decided that mine royalties are taxable as income after allowance is made for depreciation. Mine owners claimed that royalties were a depletion of the original capital.

In general, except at Mayville and in the zinc district the effect of the appraisal by the Geological Survey has been to increase the valuation of the mines. In one instance the assessed valuation was increased from \$45,000 to \$1,500,000. The local assessors and the boards of review have generally accepted the valuation of the Geological Survey. One exception has been conspicuous; the valuation of an iron mine was reduced by the Board of Review from \$300,000 to \$75,000.

ZINC MINES. The zinc mines of the Platteville district presented a number of problems which had not arisen in the appraisals in Michigan and Minnesota. The Wisconsin Geological Survey made a careful study of conditions in the Platteville district and a comprehensive report on "Method of Mine Valuation and Assessment" with special reference to the zinc mines

of southwestern Wisconsin was prepared by Mr. W. L. Uglow.⁸²

Part I of this report discusses carefully the conditions in the Platteville district which have an important influence upon mining costs, operating profits, and the value of mining property. Owing to the type and the extent of the ore deposits, the life of the individual mine is generally short and the methods of valuation developed in the iron-mining districts cannot be applied justly without the introduction of many factors for variations from the assumed standard conditions.

It was found that prior to 1913, as a general rule, little increase in assessment had been placed upon lands on account of the mineral contained. The common practice in the district has been for the mining operator to own simply a lease, and the leasing company often did not undertake to pay any taxes with the exception of those on income and personal property.

Estimating Ore Bodies. In estimating the value of a drilled ore body, it is customary for experienced operators to compute, from a map showing the location of the drill holes, the actual area underlaid with ore and to determine the total tonnage of ore that may be expected from the records of the drilling. In computing the value of the product of the mining and milling operations, the market price of various proportions of the zinc, lead, and iron minerals must be considered carefully. In spite of the painstaking work of competent engineers, the statement is made that, "sufficient mining has not been done in the district on well-drilled ore bodies to admit of a reliable set of average factors for mill recoveries, etc. It is doubtful if such a set of average factors will ever be derived."⁸³

However, mines and mineral lands are bought and sold on the basis of drilling and it is logical to conclude that appraisal for taxation can be made upon the same data with a degree of accuracy that will approximate that of the engineer upon whose estimates the valuations for sale and purchase are made.

In order to demonstrate the results of appraising zinc mines upon different bases, Mr. Uglow assumed a "hypothetical zinc mine." The assumptions were based upon the actual records of eight operating mines. The hypothetical mine was assumed to have a definite tonnage of ore available which will be worked out in four years. Upon the basis of the operating costs and

⁸²Bulletin XLI, *Wisconsin Geological and Natural History Survey*, Madison, 1914.

⁸³*Ibid.*, p. 16.

profits of mines in the district, the profits of the hypothetical mine were determined for each year of operation. Upon these data Mr. Uglow determined the assessed value of the hypothetical mine under the (1) ad valorem method, (2) the Arizona method, (3) the Colorado method, and (4) the equated income method.⁸⁴

Wisconsin Method for Zinc Mines. The actual method of appraisal⁸⁵ employed in 1914 in the Platteville district was a modification of the method used by Mr. J. R. Finlay in appraising the mines of Michigan in 1911. The most important changes were as follows:⁸⁶

1. "In properties with a considerable tonnage of ore drilled out and assayed, it was found advisable to base estimates of future grades of ore on this drill-hole information, viewed of course in the light of past production; and not to lay too much stress on the grades of ore produced in the past.

2. In the smaller properties which have very little probable ore in sight (and consequently an estimated short life) and no drillings in advance of the workings, the forecast of future production was based almost entirely on the production of the past year or fraction thereof, almost regardless of the grades of ore produced previous to that time.

3. It was assumed (in the absence of information to the contrary) that each ore body extended 200 feet in advance of each ore breast or the last drill holes in ore, with present dimensions.

4. The average price of spelter was assumed to be \$5.15 per cwt. The average price to be expected for ore of any grade for purposes of this calculation, was based partly on this spelter market, and partly on the average of a series of ore prices obtained from several operators and ore buyers of the district.

5. The cost per ton of dirt used in the calculation was based in a general way on the average cost obtained from the past records of each individual mine. The appraiser, however, did not hesitate to use a higher or lower figure, if, in his judgment, this was demanded by conditions liable to be met with in the near future. This variation became of

⁸⁴A description of the proposed equated income method will be found in Chapter VI, p. 151, and Chapter IX, p. 243.

⁸⁵Uglow, *op. cit.* p. 38.

⁸⁶*Ibid.*, pp. 38, 39.

considerable importance in the case of mines with a probable life of a year or less.

6. On account of the difficulty of estimating future probable profits in the form of an annuity, and on account of the short lives of the mines, the table of strict present values given by Hurd's Manual was used instead of the Finlay table.

7. A six percent rate of interest was used.

8. Reductions varying from 10 to 15 percent were made from the valuations thereby obtained. The figure used in each case depended on the judgment of the appraiser as to the probable extent of unforeseen risk."

Mining properties were divided into four classes for the purpose of valuation:

- (1) Operating mines, which were making a profit or were likely to make a profit on a \$5.15 spelter market.
- (2) Mines closed down, but which have ore reserves not likely to be worked at a profit on a \$5.15 spelter market.
- (3) Prospects with sufficient tonnage of ore drilled to warrant the undertaking of mining operations.
- (4) Prospects with small ore bodies drilled, but not sufficiently large at the time of assessment to insure the profitable undertaking of mining operations.

Valuations were placed on classes (1) and (3) but not on (2) and (4).⁸⁷

A number of objections to this method of valuation have been raised but none, in addition to those previously mentioned, has been offered by Wisconsin operators except the claim that prices of zinc ore and spelter fluctuate more than the prices of iron ore and copper. An investigation showed that this claim is not warranted by statistics.

The system "implies the necessity of predicting reserve tonnage, annual production, grades of ore, costs of mining, and future ore prices. The importance of these difficulties in southwestern Wisconsin can hardly be exaggerated."⁸⁸

Cost of Appraisal. The only estimate of the expenses of appraising the mines has been approximate owing to the small number of mines and the fact that the appraisers have been engaged simultaneously upon other work. The best estimate is that the total expense does not exceed \$1500 per annum.

⁸⁷*Ibid.*, p. 40.

⁸⁸*Ibid.*, p. 68.

Arizona

The Arizona Tax Commission faced the task of formulating a plan for the appraisal of metal mines producing copper, gold, silver, lead, and zinc. As previously noted the mines are now taxed upon the same basis as other property, that is, under the general property tax.

"The method used comprehended a four-year average net (proceeds), based upon actual operations, a classification of the properties and capitalization at different factors according to the class.

Eight classes were made as follows:

Class 1. Copper mines whose ore bodies are found in veins, fissures, and lenses, and do not show evidence of exhaustion.

Class 2. Copper mines whose ore bodies consist of porphyry deposits and large acreages of contiguous ground largely unexplored and undeveloped.

Class 3. Copper mines whose ore bodies consist of developed low-grade porphyry deposits.

Class 4. Copper mines whose ore deposits show evidences of exhaustion.

Class 5. Gold and silver mines whose ore deposits show evidences of exhaustion.

Class 6. Gold and silver mines whose ore bodies have not shown evidence of exhaustion.

Class 7. Zinc and lead mines.

Class 8. All producing mines of irregular output.

In addition to these eight classes, three subdivisions were made: Subdivision 'A', which shall include all such properties as have entered the profitable productive stage during the year 1915; also so as to contain Subdivision 'B', which shall include all properties that have suspended profitable production during the period under consideration, for reasons other than market or physical conditions; also so as to contain Subdivision 'C', which shall include all such properties that have suspended profitable production when said properties could have been operated at a profit during the period under consideration.

The net earnings of classes 1, 2, and 3 were capitalized at 15 percent; classes 4, 6, and 7 at 20 percent; class 5 at 25 percent, and class 8 at $33\frac{1}{3}$ percent.

These capitalizing factors were considered sufficiently large to take into account all amortization, depreciation, and capital charges, and on this account no charges for these items were

allowed against the net. The average net of the past four years was used.

The total assessment of productive mines amounted to \$212,301,620.55, and was a raise of \$60,000,000.00 over 1915. Under the Colorado law it would have been about \$60,078,792.12. Under the law of New Mexico, Nevada, Utah, Idaho, and Montana it would have been about \$81,415,310.76.^{'88a}

Other Western Ore Mining States

As previously noted,⁸⁹ a number of the western states have either levied a special tax upon production or output or have applied the general property tax rate to some arbitrary valuation of mines. This is in effect taxing mines upon a valuation which is assessed or determined by legislative enactment rather than by inspection or appraisal at true cost or market value. These programs of assessment usually include the appraisal of the improvements. In many instances the actual value of the so-called "improvement" is negligible. In the following discussion attention will be directed to the assessment of the mine itself and no further reference will be made specifically to improvements.

The special methods of assessment which have been employed recently in the mining districts under consideration include the following:

1. Gross output or gross proceeds.
2. Gross proceeds, less certain specified items of expense.
3. Gross proceeds and a percentage of the net proceeds.
4. A percentage of the gross plus a percentage of the net proceeds.
5. Net proceeds or a percentage of the net proceeds.

A comparison of the valuations that would be placed upon an operating property under each of the foregoing programs demonstrates how widely some of the programs are separated.

Mr. Uglow has shown for a hypothetical zinc mine how widely the appraisal under several programs would vary, as follows:

^{88a}Zander, C. M. Assessment of mining property in Arizona. *Bulletin of National Tax Association*, 1916, II, 20.

⁸⁹*Supra*, chap. VII, p. 156.

	Present value
Standard ad valorem method.....	\$250,000
Colorado method	360,000
Arizona method ⁹⁰	580,000
Equated income method, using actual annual profits...	350,000
“ “ “ “ average “ “	350,000 ^{90a}

The actual ratio existing between the assessed valuation and the gross production of the metalliferous mines is shown in Table No. 11, prepared by Mr. C. M. Zander.⁹¹

It is important to note that any system of appraisal which considers either gross or net proceeds, or both in any ratio, and which does not consider the life of the mine misses the mark entirely if the actual value of the property is the basis of comparison or the standard set. This statement is made under the assumption that the appraiser has simply the arbitrary directions of the law to guide him.

CALIFORNIA. In reporting to the County Assessors Association of California upon his procedure in appraising mines, Mr. C. E. Jarvis, County Assessor of Amador County, California, stated that he divided mining property into four classes, namely, mining locations, patented quartz claims undeveloped, valuable patented claims temporarily unworked, and producing quartz mines. He pointed out the difficulties of appraising and taxing unimproved and unpatented claims, suggesting that a law be enacted authorizing a uniform valuation of \$100 per claim. All patented quartz claims situated on the Mother Lode or main lode are valued at \$500 while claims on spur lodes are valued at \$250. The valuation of an idle property is based largely on the price asked for such a property by the owner. The valuation of producing mines is based in part upon the report of production and costs secured from the officers of the mine. If the mine is not profitable, the improvements are assessed at fifty percent of their cost, while upon the claim is placed a value that "will encourage further development." If the mine is earning a profit, the improvements are assessed at fifty percent of their cost. Stamp mills are assessed at \$500 per stamp. Other improvements are valued as carefully as possible. The mine itself

TABLE No. II.

1913 PRODUCTION AND 1914 ASSESSMENT OF METALLIFEROUS MINES.

Assessment includes non-producers. Lead and zinc taken from 1910 production.

State	Per cent of full value	Assessment	Assessment at full value	Gross production	Ratio of full assessed value to gross	Method of assessment
New Mexico.....	33½	\$ 3,700,000	\$ 11,100,000	\$ 10,500,000	1	General property by local assessor.
California.....	50	26,526,000	53,052,000	26,526,000	2	General property by local assessor.
Nevada.....	45	6,000,000	13,333,000	34,481,682	2-5	Net earnings.
South Dakota.....	100	18,840,000	18,840,000	7,500,000	2	General property supervised by Tax Commission.
Colorado.....	100	41,455,055	(Inc. coal) 41,455,055	(Not inc. coal) 32,542,290	1½	Combination of gross and net.
Idaho.....	40	8,089,000	20,225,000	18,767,553	1	Net earnings.
Utah.....	33½	14,483,000	43,449,000	39,703,548	1	Net earnings.
Arizona.....	100	146,672,395	146,672,395	70,875,027	2	Combination of gross and net.
		\$ 265,765,440	\$ 348,126,450	\$ 240,896,100	1½	

is rated at 125 percent of the earnings for the preceding year.⁹²

In 1912, California mines in the Mother Lode district were paying on the average approximately 7.5 percent of the gross receipts in taxes.⁹³

NEVADA. The experience of Nevada in dealing with the evasion of taxes by the mining companies handling the ore produced through subsidiary milling companies has already been cited. In this connection it is interesting to note that in 1913 the accounts of a large corporation show that the net earnings from the mine amounted to \$332,055.81 while the subsidiary milling company reported net earnings of \$1,118,603.97. The gross value of the ore shipped to the mill was \$3,144,173.11. An agreement has been made by the Nevada Tax Commission and the mining companies so that proper charges are now made for milling.

West Virginia

The assessing of mineral properties in West Virginia has developed many interesting points particularly in connection with royalties, leaseholds, and oil and gas properties.

Assessors are instructed in appraising mineral rights as follows:

“In assessing coal, oil, gas and other lands of similar character, you should constantly bear in mind that the fee simple, or what is commonly known as the ‘royalty interest,’ is assessable upon the land books as a part of the body of the land, while the ‘working interest’ or that interest in such land operated by the ‘lessee’ is assessed upon the personal property books under the head of ‘chattels real’ or ‘leaseholds’.

“The royalty interest in a well-settled producing well is worth in the market for commercial purposes \$1,250. for each barrel of oil produced every twenty-four hours; while the working interest is worth \$1000 for each barrel produced in twenty-four hours. That is, on a tract of land that produces 200 barrels of oil per day, the owner of the royalty interest of one-eighth the production receives 25 barrels of oil per day, and his interest would be worth \$31,250; while the owner of the working interest, who receives 175 barrels

⁹²Mr. Jarvis favors this method for mines generally, but suggests that other factors must be employed for other types of mines.

⁹³Jarvis, C. E. Assessment of mining properties. *Min. and Sci. Press*, 1912, CV, 210.

per day, could sell the same at \$100 for each barrel produced in twenty-four hours and his interest would be worth \$175,000. The difference between the value of the royalty interests and the working interest, based upon the production, is in favor of the royalty interest, the reason being that there is no expense attached to the production of the royalty interest; whereas, there is more or less expense attached to the working interest, in keeping up the wells. Thus, instead of valuing B's 100 acre tract of land, as per example hereinabove set out, at \$1,360. per acre, experience has shown that on account of the short life of such an investment, \$1,250. per barrel for every barrel received as royalty in twenty-four hours would be a fair market price for such interest, which would be for oil purposes alone, \$31,250. for the 100 acres of land, or \$312.50 per acre. B's 100 acre tract is certainly well worth, for oil purposes alone, \$312.50 per acre, when you consider that during the year he receives as royalty, according to the calculation above set out, the sum of \$136.87 per acre per annum. The working interest in said tract of 100 acres, according to this basis of valuation, would be worth, and would sell for upon the market, \$175,000. which interest, if the lease was for a term of years, not being a free-hold estate, would not be charged upon the land books but would be charged upon the personal property books.

"But suppose B instead of leasing his 100 acres for oil purposes and drawing a royalty, is the operator and is producing and receiving from his 100 acres, two hundred barrels per day, which two hundred barrels production is worth, and would sell for \$200,000., then would not his 100 acre tract for oil purpose alone be worth \$2,000. per acre? In other words if the oil wells on the one hundred acres, are producing two hundred barrels per day, not being encumbered by a leasehold, and could be sold in the open market for \$200,000., this tract of land for oil purposes alone would be worth the price of \$2,000. per acre.'⁹⁴

It is suggested that for gas wells the annual royalty per well be capitalized at six percent and this amount be entered on the tax rolls.⁹⁵ But if the life of the gas wells in the community

⁹⁴*Instructions to Assessors*, West Virginia, 1910, pp. 8, 15, 16.

⁹⁵*Ibid.*, p. 19.

is short the rate should be increased in order to allow for the shorter life.

Kansas

In the Kansas coal fields the practice of assessing is practically as follows:

Where the fee to proved coal lands is entirely in one person, it is assessed at \$80 per acre. Mineral reserves owned in fee, separate from the surface ownership, are listed at \$60 per acre; mineral reserves worked out or not proved, \$10 per acre; mineral leases on proved coal land, \$40 per acre; when the surface owner has leased the coal, \$20 per acre is added to the surface value; farm land adjoining proved coal land is assessed \$5 in addition to the surface value.⁹⁶

Pennsylvania Anthracite Mines and Lands

The taxation of anthracite mines and lands has attracted much attention, particularly during the last ten years. Prior to 1890, the assessors in valuing anthracite lands returned appraisals of nominal values irrespective of the coal contents, or, if the land was valued on account of the coal the valuation was low. Following 1890 there was a demand among tax payers in the anthracite fields that the mining companies should bear a larger part of the tax burden. "An effort to adjust this more equitably evolved assessment by the foot-acre of coal in the ground—usually reported by the owner or operators, occasionally under oath, as an average thickness spread over the area of the lowest bid. The valuation placed on the foot-acre base, while irregular and frequently objectionable, was not, up to 1907, confiscatory, and the taxes assessed were paid without serious resistance. In 1907, stimulated by a renewed newspaper agitation, great advances were made in the assessed valuation, still on the foot-acre basis, and assessments of from \$60 to \$100 per foot-acre were imposed; these were resisted in the courts and are still (1915) in litigation, resulting in a condition of almost intolerable chaos. Despite court rulings reducing the assessments from \$40 to \$50 per foot-acre, the valuations have been continuously increased, until at the present time assessed valuations of from \$175 to \$300 per foot-acre are attempted to be imposed. In the tax appeal cases tried, sales have shown prices varying from two or three hundred up to ten thousand dollars per acre, the smaller values for lands containing only relatively

⁹⁶Correspondence, Kansas Tax Commission.

thin coal, or practically exhausted; medium values (from two to three thousand dollars per acre) for relatively small areas with normal coal contents, but unopened and generally not of sufficient area for separate operations; and extreme values, in a few cases, for going concerns, or for lands strategically located and thus having inflated values to particular purchases."⁹⁷

Mr. Norris considers the foot-acre method unfair to the mining operator because no allowance is made for lack of uniformity in the quality of coal and also for the greater cost of mining of thin beds as compared with thick beds. Valuations on the basis of royalties paid at the present time have failed to consider the fact that much of the coal will not be mined for years, and that royalty value is not the true present value for such coal.

In 1908 there were a large number of appeals made by the owners of coal properties on the valuations made by the assessors of coal districts in Northumberland County. These valuations had been adjusted by the Commissioners sitting as a Board of Review and when the County Court considered the appeals, it proposed that a Commission be appointed "to ascertain the actual cash value of the coal properties in the districts from which these appeals were taken, including the values of properties not appealed from as well as those appealed from, so as to enable the court to fix the cash value of properties appealed from, which is necessary, because values of coal properties are largely obtained by comparison with other property located in the district." There was no objection raised by the interested parties and the Court appointed a Commission of three to appraise the coal properties. The County Commissioners had reported a total assessment of \$11,130,557 for coal properties in the county. There had been nearly one hundred appeals.

The Commission, consisting of William Griffith, George E. Stevenson, and Samuel B. Morgan, was appointed on March 4, 1908 and submitted its report on May 29, 1909.

While the work of this Commission was limited to one county and to one type of mineral deposit, it is particularly interesting to mining engineers and tax officials on account of some of the conditions prevalent. Some of the coal tracts contained originally all of the sixteen or seventeen veins of coal known in the region. The character and thickness of coal, dip

⁹⁷Norris, R. V. The valuation of anthracite mines. *Proceedings of International Engineering Congress*, 1915.

and depth of beds, and other important factors affecting mining varied widely over the district. There had been "no sales of coal lands in Northumberland County, with the exception of one or two isolated cases, since 1872 or 1873. No sales since that time throw any light upon the value of the coal in place" and no evidence had been offered as to the holding price or asking price for coal lands since that date.

The Commission considered the experience of Luzerne and Lackawanna counties and the decisions of the courts that the foot-acre method could not be legally employed. From the best data available, the tonnage of coal contained in each tract was calculated. The report of the Commission describes the procedure as follows: "The estimator then determines what he believes from all of the evidence he has found in the course of his investigation the number of tons per foot-acre the property will yield on final mining, after making all reasonable deductions and allowances for uncertainties, and upon that tonnage and the probable cost of mining it, he bases his estimate of the value of the tract."⁹⁸

The total valuation of coal properties in the county was increased by the Commission from \$11,130,557 to \$12,539,753.

The Court, after making a few changes, adopted the report of the Commission. The mining companies appealed to the Supreme Court but the decision of the lower court was affirmed.

According to the Pennsylvania Supreme Court decisions the only strictly legal method of valuation is that based on actual sales. Exception has been taken to the "foot-acre" method, to valuation on the basis of royalty values, and to valuation based on the capitalized estimated profits.^{98a}

In Lackawanna County, by agreement between the County Commissioners and the coal mining companies, the valuation is based upon a standard of \$175 per foot-acre. In Luzerne County an engineering commission for the county assessors fixed the base rate at \$150 per foot-acre.^{98b}

MINE ACCOUNTING AND REPORTS TO TAX COMMISSIONS

In order to secure justice among the mines in appraising for the purpose of taxation it is obviously necessary that uniform methods of accounting be followed, at least in so far as the accounts affect the reports filed with the Tax Commission. In a number of the states there has been friction due to irregularities in accountancy. The laws of certain of the western states are not sufficiently specific in the statement of what deductions may be made from gross earnings in order to determine the net.

It is possible that the requirements enforced by the Federal internal revenue officers in connection with the Federal income tax may be of some assistance to the state officials in prescribing similar rules controlling the accounting as it affects the records upon which the state appraisal is made. Uniform accounting has been urged by the state associations of operators in several of the important coal mining states and by the Federal Trade Commission.

The tendency of the tax commissions is to refrain from interfering in any way with the private records of the operators so long as the data requested are furnished in good form and are found to be accurate and complete. The recent law of New Mexico has been cited previously.⁹⁹ The Tax Commission is given power to prescribe the method of keeping accounts of mine companies.¹⁰⁰

In determining the net income of a corporation for a given year on which it is subject to the excise tax under the Act of August 5, 1909, the corporation is entitled to a "reasonable allowance" for depreciation of its property.¹⁰¹ Under such provision a mining corporation engaged in extracting ore from its mines is entitled to an allowance for depreciation equal to the value in place of the ore extracted and disposed of during the year.

REDEMPTION OF CAPITAL AND DEPRECIATION

While the subject of depreciation¹⁰² of mines¹⁰³ had previously received consideration, the enactment of the Federal

⁹⁹*Supra*, chap. IV.

¹⁰⁰*Laws of New Mexico*, 1915, chap. LV, sec. 2.

¹⁰¹*United States v. Nipissing Mines Co.*, 202 Fed. 803, (1912).

¹⁰²See Saliers, E. A. *Principles of Depreciation*. New York, 1915.

¹⁰³Mr. Finlay uses the term "depreciation" as meaning current construction costs. He says: "By depreciation I mean current construction costs; improvements. Depreciation means literally the process of losing

corporation excise tax and of the Federal income tax focused attention upon this phase of mining finance. Under the Federal income tax a deduction of not to exceed five percent of the gross value of the output at the mine may be permitted, but this depreciation must be based upon the actual cost of the properties containing the deposits. Unearned increment will not be considered in fixing the value on which depreciation shall be based. A general rearrangement of the system of accounting of some of the large companies has resulted from this ruling.¹⁰⁴

value: practically it means the exact opposite; it means expenses undertaken to counteract loss of value. It *is* maintenance. It only *seems* not to be maintenance because the items that compose these charges have the appearance of being new plant, not merely replacements of old plant." *Cost of Mining*, p. 42.

¹⁰⁴The following quotation, from the annual report for 1912 of the North Star Mines Co., illustrates this forcibly:

"The cost price of the mining property as at January 1, 1909, when the excise-tax law went into effect, was taken as \$1,778,245, which distributed among 1,039,871 tons of ore, the amount estimated to have been contained in the mine at the beginning of the company's operations in 1899, gives a cost rate of \$1.71 per ton. The application of this rate for the period up to January 1, 1909, on the 464,871 tons of ore then milled, reduced the cost value of the mining property to \$983,316; while the continuation of the principle through the years 1909, 1910, 1911 and 1912, according to the tonnage milled, has reduced the cost value of the original property to \$336,420 on which depreciation will continue at the rate of \$1.71 per ton until the balance of cost price is extinguished. In making this adjustment of the original cost of the property as at January 1, 1909, the company has also written up the value of the property as at that date, to the extent of \$1,136,684 to represent with the remaining cost value a fair estimate of the salable value of the mineral contents at January 1, 1909, according to data furnished by the company's engineers. The total amount charged against property account, therefore, on January 1, 1909, was \$2,120,000, which has been reduced by subsequent allowances for depreciation as above stated, to the sum of \$1,473,104. The company has been inclined to hold that the additional value written up to property account representing unearned increment accrued before the excise tax went into effect should also be subject to an allowance for depreciation; but the present ruling of the Treasury Department is not favorable to this view."

Another interesting complication is that resulting from the accounting methods of a large Nevada Corporation. The estimated average cost per ton of ore to the company for its entire tonnage was found to be \$16.36. The factors employed in establishing this per-ton-unit were the mine property cost and the estimated total tonnage acquired at the time

Corporations leasing oil or gas territory are permitted to base depreciation upon the cost of the lease and not upon the estimated value, in place, of the oil or gas. Operations carried on only upon a royalty basis may not make any deductions for depreciation.

An investigation of the records of a number of American mining companies demonstrated that sinking-funds are now being established in order to replace the capital invested.

the mine was purchased. During the early years of the operations, the best ore was mined at a considerable profit. By the time the Federal excise corporation tax was levied practically all of the best grades of ore had been mined and operations were being continued on the poorer grades of ore which, however, were returning a good profit. According to the regulations of the Internal Revenue Department, the income of the company might be determined in part from apparent profits measured by the net recovery per ton in excess of the estimated cost per ton. The accounts of the company showed in 1912 that the net realization from operations was \$11.75 per ton while the estimated cost per ton of all the ore at the time of purchasing the mine was \$16.36. On this basis the amount written off for depreciation of the property during 1912 exceeded the net earnings by \$2,043,888.61. During the calendar year of 1912, the dividends paid aggregated \$5,694,636.80. Under the present Federal income tax, not more than five percent of the gross value of the ore may be charged to depreciation.

CHAPTER VIII

THE TAX BURDEN

In this chapter it is proposed to present the available data showing the amount of taxes paid by various types of mining properties and to compare the taxes paid per unit of product by mines operating under the different tax systems. The data used have been secured from tax commission and other official state reports, United States census reports, annual reports of mining companies, and by correspondence with tax officials and mining companies.

Tables No. 12 to 26 inclusive are based upon data selected from Volume XI of the Thirteenth Census. They show the taxes paid in 1909 by the mines of the various states.

Table No. 12 includes data on the value of the product of the entire mining industry of each state; the total cost of securing this product, but not including taxes; the surplus above operating costs before taxes are paid; and the total amount of taxes paid by the mines in each state. From these data the ratio between the amount of taxes paid and the surplus above operating expenses has been calculated and the total amount of the taxes paid is given as a percentage of the surplus. For a number of the states the census statistics are not detailed enough to determine this percentage.

Under the assumption that the data as given are complete or at least representative, it is at once evident that the ratio of surplus and of gross earnings to taxes varies widely among the states. If the data for the twenty-one leading mining states are considered, it will be noted that the percentages of surplus paid as taxes range from 3.56 to 12.78, except for five states three of which are above this range and two below. Examining the list of sixteen still closer, it will be noted that nine of them range from 3.56 to 6.44 percent and seven from 8.01 to 12.78 percent. Each group includes some states employing the general property tax and states using a system of taxing output or earnings. The aggregate of the taxes paid in 1909 by all mines in the United States was \$17,796,793, which was 1.44 percent of the reported

value of the product and 8.33 percent of the surplus above operating expenses, not including taxes.

It should be noted that these percentages of surplus paid in taxes must not be compared with similar percentages for other types of property because the mining percentages have been calculated without any allowance having been made for the redemption of the capital invested in the mine. As previously noted the operation of the mine destroys the resources of the mine and proper allowance must be made for this fact whenever comparisons are made between the taxes paid upon mines and the taxes upon other classes of property.

TAXES PAID IN THE STATES BY ALL MINES PRODUCING THE
SAME MINERAL

In Table No. 13 are given data for the coal mines of the principal coal producing states. According to the census report the mines of seven of the states were operating at a loss; this conclusion is based upon the statement of operating expenses (including taxes) and of receipts from the sale of the product. In two additional states the percentage of surplus going into taxes was over forty, although the total tax paid was \$234,021

for one state and \$83,020 for the other. The range in percentage of surplus paid in taxes was from 3.06 for Washington to 53.89 for Ohio. In those states in which coal mines were being operated at a loss the tax burden was of course greater than the burden in Ohio.

Most of the coal mining states tax coal mines on an ad valorem basis. Oklahoma taxed on output, but the census showed the Oklahoma mines to be operating at a loss. Utah

imposes taxes upon net proceeds, and the mines in 1909 paid taxes amounting to 5.81 percent of the surplus above operating expenses. Montana, taxing in a similar manner, took 5.95 percent of the surplus. According to the statistics given, the anthracite industry of Pennsylvania paid 15.39 percent of the surplus in taxes,¹ while the bituminous mines paid 10.83 percent. Data for individual mines do not correspond closely with these results obtained from the census statistics.

Taxes paid by all of the copper mines in each of the important copper mining states are given in Table No. 14. Owing to the fact that the mines of a number of important copper mining districts produce gold and silver as by-product, the statistics given are not absolutely correct as showing the tax burden upon the copper produced. It is generally conceded that the copper mines of Michigan are assessed in excess of their actual value. The taxes paid in 1909 by the copper mines of Michigan were 14.28 percent of the net and 3.15 percent of the gross receipts. In none of the other important copper-producing states did the taxes amount to more than 6.1 percent of the net.

The percent of surplus paid in taxes by iron mines, as exhibited in Table No. 15, does not vary much among the states

¹The anthracite tax of two and one-half percent was not levied until 1913.

Wyoming.....	Data inc	omplete			

producing important quantities of iron ore. Only three states produced more than four million tons per annum, namely, Minnesota, Michigan, and Alabama. The percentages paid in taxes in 1909 were 9.83, 11.83, and 10.53 respectively. The percentage paid by the iron mines in other states was as a rule much lower, as, New Jersey, 1.51 percent; New York, 5.01 percent; Pennsylvania, 4.51 percent; and Wisconsin, 3.83 percent.²

The census data on the deep gold and silver mines are not conclusive, as much gold and silver is produced as a by-product in the mining of copper and lead. Practically the only states for which the data can be used are South Dakota and California. In the former the percentage of the surplus paid in taxes was 7.34, while in the latter it was 35.43. The available data are given in Table No. 16. Statistics on gold placers are given in Table No. 17. California is the principal state in this group,

²Since 1909 the taxes of the iron mines in a number of these states have been increased greatly.

the percentage of surplus in taxes in 1909 having been 2.82.

It is difficult to secure data for the lead and zinc industry by states as many mines produce lead and zinc with other metals. The only important lead and zinc states for which data were given were Wisconsin and Missouri. In the former 1.14 percent of the surplus was paid in taxes; in the latter, 3.62 percent.

Table No. 19 presents statistics for the petroleum and natural gas industries in the various states. In only one state was the percent of surplus paid in taxes over 9.01 percent. In West Virginia it was 12.15. In the eleven states for which data are

available, the oil and gas wells in three states paid less than 3 percent in taxes, and six of the others paid between 4 and 7 percent.

In the states producing phosphate rock the percent of surplus paid in taxes ranged from 2.27 to 3.84. The available data are given in Table No. 20.

According to the census statistics given in Table No. 21 the percent of surplus paid in taxes in the gypsum mines varied widely among the states. In three states it was between 1 and 1.5 percent; in four states, between 4.75 and 6 percent; in two states between 8.5 and 9 percent; in one state 17.53 and in another 22.43 percent. Data on the quarrying industry are given in Tables No. 22 to 26 inclusive.

Before passing to a consideration of the taxes paid by individual mines, attention may be directed to a comparison between the taxes paid in the same state by different divisions of the mineral industry.

TABLE NO. 24.

TAXES PAID IN 1909 BY MARBLE QUARRIES IN THE LEADING STATES.

State	Value of product	Expenses not including taxes	Surplus before taxes are paid	Taxes paid	Percent of surplus paid in taxes
Georgia.....	\$ 767,349	\$ 323,751	\$ 443,598	\$ 1,678	.38
Massachusetts.....	252,557	220,832	31,725	1,984	6.25
New York.....	344,981	303,813	41,168	2,878	6.99
Tennessee.....	613,741	481,182	132,559	2,934	2.21
Vermont.....	3,277,651	2,547,573	730,078	50,660	6.94

The mineral industry of California paid as taxes 22.8 percent of the surplus. The copper mines paid 2.02 percent; the deep gold mines, 35.43 percent; the placer mines, 2.82 percent; the petroleum and natural gas wells, 6.32 percent; the granite quarries, 3.03 percent; the limestone quarries, 2.06 percent; and the sandstone quarries, 10.74 percent.

In Illinois, the mining industry paid taxes amounting to 3.56 percent of the surplus. The coal mines paid 8.14 percent; the petroleum and natural gas wells, 1.32 percent; and the limestone quarries, 1.94 percent.

In Indiana, the entire mining industry paid 10.04 percent in taxes; the coal mines, 42.79 percent; the petroleum and natural gas wells, 9.01 percent; and the limestone quarries, 2.46 percent.

In Michigan, the mineral industry paid taxes amounting to 11.01 percent of the surplus. The coal mines paid 7.09 percent; the copper mines, 14.28 percent; the iron mines, 9.83 percent; the gypsum mines and plants, 5.20 percent; and the limestone quarries, 9.01 percent.

In Ohio, coal mines paid taxes amounting to 53.89 percent of the surplus; the petroleum and natural gas wells, 6.53 percent; while the mineral industry of the entire state averaged 8.01 percent.

In West Virginia, the mineral industry paid in taxes 17.35 percent of the surplus. The coal mines paid 24.95 percent; the petroleum and natural gas wells, 12.15 percent; the limestone

quarries 0.85 percent; and the sandstone quarries, 2.25 percent.

Statistics collected by the West Virginia Coal Association show that the coal industry of West Virginia paid in taxes for the year 1915 the sum of \$2,242,311.51. The total assessed value of coal properties in the state amounted to \$186,843,411. In addition to the state taxes on property the mining corporations pay a corporation tax in the form of a license fee and also an excise tax.

The total assessed valuation of the coal industry was second only to the taxes paid by the steam railroads, namely \$188,910,-745. The oil and gas companies were assessed \$99,434,636.³

In Pennsylvania, the following may be noted:

	Percentage of surplus paid in taxes
All mineral industries, in 1909.....	10.69
Bituminous coal mines.....	10.83
Anthracite mines	15.39
Iron mines	4.51
Petroleum and natural gas wells.....	2.94
Granite quarries	3.86
Limestone quarries	2.52
Sandstone quarries	6.24
Slate quarries	19.16

³*Black Diamond*, 1916, LVII, 347.

TAXES PAID BY INDIVIDUAL MINING COMPANIES

In many of the published reports of mines the amount of the taxes paid is combined with other expenses so that it has been impractical to secure data for these mines. In Tables No.

27 to 30 inclusive are grouped the taxes paid in recent years by copper, iron, coal, and gold and silver mining companies. Additional historical data, of interest for comparative purposes, are included in the text. In addition to the statistics of taxes paid, data showing the assessed valuation of mining property are included in order to show present tendencies in valuing mines and mineral lands.

22-32 Footnotes on page 229.

According to Mr. J. Ross Browne³³ the Eureka Gold Mining Company, operating a gold placer in California, produced \$147,529.50 between June 5, 1863 and August 11, 1864. Of this sum there was credited to dividends \$66,000 and there remained a balance above taxes of \$4,078.45. The taxes paid amounted to \$108.40.

It has frequently been urged that many precious metal mines have not paid to the state a proper share of the profits. The following data are interesting as they show the amount of taxes paid and the ratio between the taxes and earnings during the "bonanza" period in several of the western mining states.

Data on two Nevada mines as reported by Mr. Browne³⁴ and by Mr. James D. Hague,³⁵ are given in Table No. 31.

²²General property tax.²³Bullion tax.²⁵Net proceeds tax.²⁴Gross and net earnings tax.²⁶Per cubic yard.²⁷Net value per ton increased from \$1.52 in 1908 to \$4.45 in 1911.²⁸Net value per ton increased from \$2.67 in 1911 to \$3.70 in 1913.²⁹Property tax.³⁰Federal income tax.³¹Increases due to change in assessing.³²Based on dividends paid.³³*Mineral Resources of the United States.* 1867-68. p. 189.³⁴*Mineral Resources of the Pacific Slope.* p. 375.³⁵*Mining Industry. Exploration of the 40th Parallel.* p. 154.

The Consolidated Virginia mines in the year 1875 produced bullion worth \$16,957,538.99. Dividends amounting to \$12,204,000 and taxes amounting to \$152,795.13 were paid.³⁶ The taxes amounted to 1.252 percent of the dividends.

Table No. 27 shows the taxes paid per ton of ore mined and per pound of copper, and, when the data are available, the percent of the net earnings paid in taxes.

Data are given in Table No. 28 for the average of the iron ranges of Minnesota and Michigan. Comparison may be made of the taxes per ton of ore mined and shipped and the percent of the net earnings paid for taxes.

But few data are available on coal mines, and these are chiefly on anthracite mines. The available data are given in Table No. 29 and are expressed principally as taxes per ton and as percentages of the net earnings paid for taxes.

Data on gold and silver mining companies are given in Table No. 30. Most of the data are for the years since 1910 and therefore offer little basis for comparison with the census data in Tables No. 16 and 17. It has not been possible to determine the net value upon the same basis for all mines, but in general the figures given are accurate enough for comparison between the different systems of taxation.

Taken as a whole the data in Table No. 30 show that the precious metal mines, in the five states for which data are given, pay as taxes a smaller percentage of the net earnings or surplus above operating expenses than most mines of the same type operating under other systems of taxation. None of the Nevada mines for which data are given was paying more than 3.80 percent in taxes until 1914. In all of the other states listed, most mines are paying more than this. The foregoing statement does not imply that the mines in each state were not paying their share of the taxes as compared with other classes of property in the same district.

Some of the typical gold mines may be compared. The North Star in California paid 5.12 percent in taxes in 1913, while the Homestake in South Dakota, also taxed under the general property tax, paid 5.495 percent. Operating under a net proceeds tax were the Tonopah Mining Company of Nevada

³⁶Raymond, R. W. Statistics of mines and mining in the states and territories west of the Rocky Mountains. *8th Annual Report, Commissioner of Mineral Statistics*. Washington, 1877. p. 155.

which paid 2.96 per ton in 1914,³⁷ and the Bunker Hill and Sullivan of Idaho which paid 3.33 percent in 1911.

Arizona. In 1911 the valuation of mining property as equalized by the Territorial Board of Equalization was as follows:

Productive patented mines, 526.....	\$ 10,568,560.80
Improvements on productive patented mines.....	685,254.00
Non-productive patented mines, 81,031 acres.....	2,898,465.38
Improvements on non-productive patented mines...	1,919,748.00
Patented mill-sites, 714.97 acres	28,667.58
Improvements on productive unpatented mines and claims	74,400.00
Improvements on non-productive mines and claims	526,666.50
Smelters, not included in improvements on mines and claims	2,540,569.00
All mining property, 93 percent of the total.....	19,242,331.36
All property subject to taxation.....	98,032,708.64
All mining property, 1912, 31.7 percent of total....	42,145,084.49
All mining property, 1913, 37.2 percent of total....	140,488,649.30
All mining property, 1914, 35.7 percent of total....	134,247,752.59
All productive mines, 1916 ^{37a}	212,301,620.55

Colorado. The assessed valuation returned by the county assessors of Colorado in 1913 and 1914 was as follows:

	1913	1914
Non-productive metalliferous mining claims	\$13,796,749	\$14,433,012
Improvements on metalliferous mining claims	8,929,872	9,048,223
Assessment on output from metalliferous mining claims.....	18,728,434	13,309,939
Total as returned by assessors.....	41,455,055	36,791,174
Total as corrected by the tax commis- sion	46,042,067	41,468,531

The increase from \$18,012,830 in 1912 to \$46,042,067 in 1913

³⁷The report of the Tonopah Mining Company for the year ended February 28, 1915, shows that the taxes paid during the previous fiscal year amounted to 7.95 percent of the net earnings.

^{37a}Zander, C. M., Assessment of mining property in Arizona. *Bulletin of National Tax Association*, 1916, II, 20.

was due to the change in the law.³⁸ The metal mines in 1912 were assessed at 4.27 percent of the total for the state; in 1913, 3.52 percent; in 1914, 3.17 percent; and in 1915, 2.64 percent.

In the fifteen principal metal mining counties of Colorado the mines have paid a large proportion of the taxes, as shown by the following statistics of assessed valuation:

	1912	1913	1914
Assessed value of all mining property	\$17,896,173	\$43,546,803	\$38,667,874
Assessed value of all other property	36,974,647	109,446,426	107,134,265

Coal land and improvements were returned by the county assessors of Colorado as shown in Table No. 32.

TABLE No. 32.

ASSESSED VALUE OF COAL LANDS AND IMPROVEMENTS IN COLORADO.

	Acres	Assessed value	
		Total	Per acre
1913			
Productive coal land.....	58,812	\$7,239,380	\$ 123.10

Utah. According to the Report of the Utah State Board of Equalization⁴¹ for 1913-14 the assessed value of the mining property for the state was as follows:

	1913.	1914
Mining companies	\$ 3,721,407	\$ 3,990,283
Net proceeds	11,393,366	9,649,932
Mining claims		1,131,952
Total of all property.....	213,868,897	221,720,400

Virginia. The assessed value for 1913 of mineral lands in Virginia⁴² is shown by the following data:

	Per acre	Total
Lands under development		
Value of land	\$ 5.06	\$ 640,323
Value of minerals	21.42	2,715,422
Value of improvements and machinery	49.80	6,323,651
Total	\$76.28	\$ 9,676,376
Lands not under development		
Value of land	2.84	6,409,530
Value of minerals	4.56	10,277,093
Value of improvements and machinery	.49	1,113,220
Total	\$ 7.89	\$17,799,843
Total value of land		\$ 7,049,853
Total value of minerals		12,992,515
Total value of improvements and machinery.....		7,433,871
Total		\$27,476,239

Wyoming. The state and county taxes on the output of the mines of Wyoming amounted to \$62,878.48 in 1908 and to \$30,094.51 in 1910. The mines in Sweetwater and Uinta counties paid over \$40,000 in 1908, the rate being approximately \$19 per \$1000; in 1910 the mines in these counties paid \$27,000, the rate having been reduced to less than \$8 in both counties. In 1913, the output tax of the mines of the state amounted to \$47,734.95. The mines of Sweetwater county were taxed at a rate of \$8.88 and paid \$22,164.14 of the total of \$47,734.95.

CHAPTER IX

SUGGESTED METHODS OF TAXATION AND REFORMS

The prevailing methods of taxing mines have provoked much discussion and have frequently been criticised as being unjust and inefficient. From time to time there have been made many suggestions for the correction of apparent or imagined faults in the system. At the present time there seems to be generally a sincere desire, on the part of the mine owners and the tax officials alike, to discover the facts and to equalize the tax burden. In a number of the western states the mine operators have realized that within the local taxing district at least there is little to be gained by attempts at concealment of the physical condition of the mine and of the financial condition of the mining company. The value of the real estate in the mining districts usually varies directly with the aggregate value of the mines, and as the mines become exhausted the value of the real estate diminishes unless there are other local industries that can support the population previously engaged in mining.

This interdependence of interests has been demonstrated recently in several mining districts in which the important mines have depreciated in value. When the mining companies asked the Boards of Equalization for a reduction in the assessed value of the mines, the other property owners demonstrated the fact that the depreciation suffered by the mining companies was no greater than that suffered simultaneously by owners of dwellings and business houses in the mining community and that a reduction of the assessed value of the mines would result in greatly increased taxes upon other property. It was shown in a number of instances that the mining companies were no less able to pay taxes than were the other property owners.

The criticisms of the methods of taxing and appraising mines have come principally from four classes of writers, namely, (1) mining engineers, (2) mine operators and officers, (3) state officers and tax commissions, and (4) economists.

The criticisms of mining engineers have usually been directed at the methods of appraising mines for taxation rather

than at the system of taxation employed. The mining capitalist has frequently made a protest against increased assessment and changes in rates or in the system of taxation. In a number of instances protests have been filed against heavy public expenditures within the local taxing district. The mine operator and the mine capitalist are probably no less public spirited than those who furnish the capital for other industries; in fact, in many of the western and of the Lake Superior mining districts, the mining companies pay most of the taxes and realize that they must continue to do so.¹

The view point of the state officer is occasionally influenced by the demand made upon him for additional funds to meet the increased expenditure of the state. This criticism is not justified in general as, in most of the mining states, the members of the tax commissions and the other state officers have been broad-minded and fair in dealing with the mining industry, particularly when all property has been assessed at its true and full cash value. The mining companies have come to realize that they are more apt to secure justice by presenting all the facts in regard to the condition of their property, than if attempts are made to conceal part of the facts.

The criticisms of a number of the economists who have written upon the taxation of mines have been founded upon and formulated from their personal conceptions of public rights in minerals and have not been directed at the method of taxation itself.

In presenting the suggestions and criticisms of the various contributors, an effort has been made to point out suggestions that (1) can be formulated into laws not conflicting with existing state constitutions; (2) that may be feasible in most of the mining states; (3) that may be practical and economical of administration; (4) that will apply to all types of mines without discrimination; and (5) that will cause mines to contribute a fair portion of the necessary public revenue.

MINING ENGINEERS AND MINE OPERATORS

As previously noted, most of the criticisms and suggestions made by mining engineers and geologists have been directed at the methods of appraisal rather than at the system or method

¹In Ishpeming, Michigan, the 1912 tax roll was \$279,393 of which three mining companies paid 85 percent. The same condition prevails in Minnesota on the Mesabi iron range, and in some districts the mines pay more than 90 percent of the taxes.

of taxation. In this discussion attention will be directed particularly to the system or method of taxation, the purpose of this discussion being to show what the mining men themselves think of the systems of taxation and what changes they would advise.

Mr. James R. Finlay recommends that mining property be taxed for local purposes upon the value of the surface and of the equipment, and for state purposes upon the excess of receipts over expenditures. The combined taxes should not exceed the average levied on other forms of property. Undeveloped mineral lands should be valued exactly as unused real estate is valued, namely, at a fixed price per acre, "according to the prices fixed by mere trading. There is apparently no other basis."²

Mr. J. Parke Channing said: "There are radically different classes of mines; those in which you see all the ore and those in which you cannot see any. We must know it is impossible to get any method of taxation that is absolutely equitable. You have to get a method that is a compromise and get as nearly as possible to the truth. And, therefore, I am strongly of the opinion that a tax or valuation based upon the net or gross product or both is the most equitable."³

Mr. A. H. Rogers favors a "reconciliation of property and gross product taxes."⁴

Mr. Heath Steele has presented a program for the taxation of mines based upon apportioning to each industry in a state its share of the revenue to be raised by taxes. This burden should then be apportioned among the mines as follows:

1. A tax upon all surface lands owned, according to their use and value.
2. After the surface tax has been adjusted, a rate should be determined which, when applied to the yearly profits, would make up the balance necessary.
3. All buildings not used immediately in mining operations should be taxed at the same rate as other property.
4. All plants, equipment, unmined ore, and untreated ore on hand should be exempt from taxation.

In determining profits, Mr. Steele would permit deductions from receipts and the value of the finished product on hand as follows:

²*Bulletin of Mining and Metallurgical Society of America*, 1912, V, 158.

³*Proceedings of National Tax Association*, 1913, VII, 407.

⁴*Bulletin of Mining and Metallurgical Society of America*, 1912, V, 164.

Actual expenditures for mining, transporting, and treating the ore; refining and selling the product; and depreciation based on the original cost of the plant and equipment. He would not allow for the purchase price of the mine "owing to the many ways in which this account could be figured."⁵

Mr. H. M. Chance concluded a discussion of the general subject of mine taxation with the following statement: "Taxation for revenue only, without the incidental purpose of restraint or regulation, would certainly seem to be the only form of taxation that is just and equitable to interests affected."⁶ He considers impractical the proposal to extend the Finlay system of appraisal to most of the metal mining districts owing to the cost of making the appraisal and owing to the nature of the ore deposits, but apparently favors a physical valuation or capitalization of earnings as the most practical method of appraising coal mines and lands.

The Coal Tax Commission appointed in 1907 to appraise the anthracite properties in Northumberland County, Pennsylvania stated: "Coal land in the process of mining becomes depleted from year to year, and finally exhausted and valueless as coal land. Its body has been destroyed and can never be restored; and, in order to earn any income from it, it is necessary to destroy it. Therefore it is evident that each and every ton of coal in the ground should share equally in the burden of taxation. This could best be accomplished by a uniform tax upon each ton as mined. There seems no equitable reason why the unremunerative ton of coal which is to lie dormant in the ground for fifty or one hundred years should pay taxes annually during that time while the remunerative ton which is mined and sent to market today escapes with only the one year's tax. We are therefore forced to the opinion that the only remedy for the existing difficulties surrounding the taxing of coal lands rests with our lawmakers, and they should act quickly, before the coal is all sent to market, thus escaping its equitable share of the cost of government. A tax upon the output annually seems the only remedy. The unremunerative coal contained in idle properties might be taxed at a nominal rate per acre for the coal,

⁵Steele, Heath. Mine taxation. *Engineering and Mining Journal*, 1914, XCVIII, 381.

⁶Chance, H. M. Taxation of mining property. *Proceedings of American Mining Congress*, 1913, XVI, 339.

similar to the present method of taxing unremunerative or unseated surface land.”⁷

Mr. William Griffith, an eminent mining engineer of the Pennsylvania anthracite fields, recently made a statement in regard to the existing conditions of appraisal and taxation in the anthracite districts.⁸ He concluded: “Anthracite should be taxed once and once only. Perhaps the better way to accomplish this would be to eliminate the taxation of coal as real estate, except in a nominal way, and lay a tax upon each ton of coal as it is mined, as is being advocated by the Scranton Board of Trade.”

⁷*Report of Coal Tax Commission of Northumberland County, Pa.*, 1907, p. 35.

⁸*American Mining Congress Journal*, 1916, II, 382. Mr. Griffith reports that the Commissioners of Lackawanna County have variously estimated the value of coal at from \$300 to \$500 per foot acre, and recently in Luzerne County one group of engineers employed by the landowners estimated the value of a certain tract of land at or around \$700 per surface acre, while another group employed by the county authorities estimated the same land at about four times this value. Mr. Griffith has used the royalty rate as a proper standard of valuation. “The supreme courts have declared that a perpetual lease is a sale and that the royalties are installments on the purchase price. Therefore, the royalty represents the value of the coal in the ground, and is a fair and equitable standard of value for estimating the worth of the coal; better to our mind than outright sales, because the sales of coal land in this locality are not frequent, and the deeds and records of such transactions usually cover up the actual selling price so that it cannot be ascertained. Of course, each property becomes a problem in itself, but having a basic standard, deductions or allowances may be made to conform to the various conditions and possibilities that may be peculiar to each property.

It will be noted that this method of ascertaining the taxable value of coal places the greater burden of the tax upon the coal in the going properties, which will be somewhat exhausted. For example, at the royalty rate of 30 cents per ton, other things being equal, the coal in a property which will be exhausted in ten years, would have a present value of 22 cents per ton, whereas at the same royalty rate the coal in an adjoining property which had a life of sixty years would have a present value of 8.1 cents per ton. To our mind, this is as it should be, because it is manifestly unfair to tax the unremunerative ton year after year at full rate for 60 or 100 years, whereas the remunerative ton of coal which is mined this year escapes with but one tax. And, along the same line, virgin properties which are held for future mining, should, to our mind, be considered in the same manner as we now treat unremunerative, unseated lands, by imposing a sufficient nominal tax until such time as they become productive.”

Mr. R. V. Norris has considered particularly the taxation of anthracite mines and lands in Pennsylvania. He objects to the methods of taxation and of appraisal at present in use on the ground that they lead to the "rapid and uneconomical exhaustion of the mineral wealth of the country, and put a premium on premature and wasteful exploration." He proposes the following program: "The proper method of taxation for all minerals appears to be a tax based on the value at the mine of each year's product at the local rate of taxation assessed for that particular year, including an assessment on surface lands, outside improvements and machinery, the value of which is readily ascertainable; but not including any valuation of mine openings, or inside improvements, which are incidental to the mining process and which after the exhaustion of the mineral are of no value."⁹

The proposals of Mr. E. B. Kirby and of Mr. R. B. Brinsmade are presented under the discussion of the single tax.¹⁰

Mr. R. C. Allen, State Geologist of Michigan, who is officially Mine Appraiser for the Michigan Board of State Tax Commissioners, favors the general property tax and the appraisal of mines upon the ad valorem basis after the methods developed in Michigan.

Dr. C. K. Leith, who has had extensive experience in the appraisal of iron mines and lands, was a member of the Committee on Taxation of Mines and Mineral Lands appointed by the National Tax Association which favored the general property tax and careful appraisal.¹¹

Mr. W. L. Uglow, in a recent bulletin of the Wisconsin Geological and Natural History Survey,¹² favors the use of a method of equating income with property valuations so that mining property may bear its fair share of the taxes. A factor is determined which when applied to the general property tax rate will give the proper rate to be levied upon the income of the mining property. This procedure is recommended particu-

⁹Norris, R. V. The taxation of coal lands. *Proceedings American Mining Congress*, 1913, XVI, 331.

¹⁰*Infra*, p. 250.

¹¹This committee endorsed the system of appraisal now in use in the Lake Superior district and opposed gross and net methods of taxation. *Infra*, p. 249.

larly for short-lived mines that have relatively little ore in sight.

Professor J. Daniels in an address at the Washington State Tax Conference in 1914 favored "some form of nominal holding-tax on the land until it develops into a producing property and, when the mine reaches the active point of production, the value of that property as a going concern should be used as the annual basis of assessment of taxes."¹³

Professor M. Roberts in discussing the address by Professor Daniels said, "It seems difficult to avoid making use of the general property tax in some degree in taxing mining property. In an undeveloped district the holding-tax should be quite light. In developed districts and where there is regularity to the deposits it can be somewhat heavier."¹⁴

The opinion of Hon. E. D. Boyle, Governor of Nevada, is particularly interesting because he is a mining engineer and his experience as a state official has given him an intimate knowledge of the problems of providing public revenue. In a paper on "Mine Taxation," after discussing the gross income tax on railroads and other utilities, he concludes: "Granting then, that a royalty system of commutated taxation as applied to the public utilities has proven a workable and generally satisfactory proposition, why not apply it to the mines? The mine, unlike the railroad once under exploitation, can show an income only by the extinguishment of its capital. It is obvious therefore that in determining the percentage of the mine's gross income to be paid we must take this fact into account and the rate of the royalty should be such as to fairly well equalize the assessments between the two classes of property. Since the mine is usually practically valueless when the mine is exhausted, improvements should be considered as a part of the mine—no tax levied against them other than the one royalty against the whole property. An analysis of this system, using 2 per cent of the gross income as the basis of the tax, based on the experience of the leading properties of Nevada for its past two years indicates that (1) the Nevada mines would pay 65 per cent more taxes than they do at present; (2) with few exceptions among the larger mines the percentage of the capital value, as far as the same may be estimated, paid annually in royalty would be less than one per cent,—this figure being deemed to represent a fair

¹³Daniels, J. Taxation of mineral lands. *Bulletin of University of Washington*, General Series No. 84, August 1914, p. 88.

¹⁴*Ibid.*, p. 89.

proportion of capital value taken in taxes annually on all property throughout the United States; (3) low-grade mines producing large tonnages with a small margin of profit do not appear to be more adversely affected than the higher grade mines, owing to the fact that the exemption of their usually large and expensive plants acts in a compensatory manner. It appears to me that the gross proceeds tax, perhaps modified in the cases of certain mines operating under adverse conditions, is just as rational and just as scientific in actual practical operation as any of the systems thus far proposed. If this be true it is certainly the simplest and deserves a trial somewhere in the west.”^{14a}

Mr. F. F. Sharpless, a well-known mining engineer, said:

“While we may not all agree, evidently we do not agree, upon a proper basis of taxation, we can and do agree upon the proposition that mines should not bear more than their due proportion of the burdens of the community. Professors of economics and tax experts may be able to enlighten us on the technique of assessment and the collection of taxes, but unless they are fully informed as to the nature of the mining business, and wherein it differs from other commercial enterprises, and wherein one type of mining differs from another type, such experts will not be able to do justice to the mining business. The majority of mining men are honest and are willing to pay their due proportion of taxes. The majority of assessors are honest, and desire to tax justly. What then is needed is co-operation between these two classes of citizens. Lobbying with law-makers may yield temporary relief, but this is not what is required. Education of the miner as to methods of taxation, and education of assessors as to the nature of the business they are assessing is more to the point. There must be co-operation, instructive and constructive, or mining taxes will grow rapidly.”

In objecting to the arbitrary and unscientific methods generally employed in the valuation of coal lands for the purpose of taxation, Mr. S. A. Taylor said:

“In order to arrive at a fair conclusion or fair valuation it would probably require some persons of more expert knowledge of the value of coal lands than is generally possessed by assessors, and while I realize that the person or persons who would

^{14a}Boyle, E. D. Mine taxation. *Proceedings of National Tax Association*, 1915, IX, 80.

^{14b}Paper before Mining and Metallurgical Society of America. *Mining and Engineering World*, 1915, XLII, 1168.

be most capable of serving on such a commission would be selected from among those having a broad experience in investigating virgin coal lands, in the actual operation of mines, and in the selling or marketing of the product of the mines, and might cost the districts that are levying the taxes some money for a report on the values within the district, yet in the end I believe that if this plan were adopted, it would give more general satisfaction, in that it would be more equitable.”

In a conference between representatives of Arizona mining companies and the members of the Arizona Tax Commission held October 29, 1912, the representatives of the mining companies made the following proposal:

1. That all patented mines be assessed per acre at the price paid to the United States Government therefor.

2. That all improvements upon said mines be assessed by the State Tax Commission at the same value as other property.

3. That the net earnings from said mines be ascertained and assessed at 100 percent. of the true value thereof.

4. That in addition thereto all producing mines be assessed upon 12.5 percent. of the gross product or yield thereof in value.¹⁵

STATE OFFICERS AND TAX COMMISSIONERS.

State officials and members of the tax commissions are frequently obliged to consider “policy and expediency” as well as the “canons of taxation.” However, it may be assumed that the executive officers of the state are interested in administrative problems which have to do with productivity, economy, elasticity, and certainty of a revenue-producing system. In the administration of mine taxation in the various states that employ tax commissions the problems peculiar to mine taxation have received special attention and from time to time the reports of the tax commissions have carried recommendations to the state legislatures. Following is a condensed statement of a number of these recommendations which have not been formulated into laws.

¹⁴Taylor, S. A. Valuation of coal lands. *American Coal Journal*, October 16, 1915.

¹⁵*First Report, Arizona State Tax Commission, 1912*, p. 63. The Arizona legislature enacted a law effective in 1913 and 1914, providing that producing mines be assessed at 400 percent of the net earnings plus 12.5 percent of the gross.

The Minnesota Tax Commission in 1902 regretted that the constitution of the state did not permit the enactment of a tonnage tax. In the opinion of the members of the Commission "a tonnage tax is the only appropriate means for the taxation of the output of mines."¹⁶

Again in 1908, the Minnesota Commission pointed out the desirability of a tonnage tax although at that time most of the members were apparently reconciled to the working of the general property tax. Mr. O. N. Hall filed a minority report opposing the endorsement of a tonnage tax by the Tax Commission.¹⁷

A tonnage tax is not favored now by the Minnesota Tax Commission as it is claimed that it would require a graduated tonnage rate, which would be more complicated than the system now in force. This graduated rate would be based upon the quality of the ore, cost of mining, etc. It probably would be more difficult to administer than the general property tax.

The Wisconsin Tax Commission in 1910 commented on the difficulty of assessing mineral land and said: "It would be more logical and tend to better administration if the lands were assessed without regard to the minerals, and the latter subjected to an occupation or privilege tax when extracted, or even included under the income tax."¹⁸

The message of the Governor of Wisconsin, January 12, 1911, contains practically the same statement. He suggested that the occupation tax should be proportionate to the value of the amount of ore removed.

A suggestion of the Wisconsin Tax Commission in 1915 was embodied in a bill to create Section 1053 of the Statutes providing for the valuation and assessment of lands containing deposits of lead and zinc. In general, the proposed plan of assessment was an attempt to equate the earnings of lead and zinc mines with the valuation of property; this was to be done by multiplying the sum of the royalties paid and profits earned by two and four-tenths. The sum so obtained was to constitute, for purpose of taxation, the full and true value of the lands.

It has been suggested by tax officials in Wisconsin that society might receive the greatest benefit from the mineral and other resources if economical development and use were made the prime object rather than possible revenue. Mine operators

¹⁸*Fifth Biennial Report, Wisconsin Tax Commission, 1911, p. 16.*

might be encouraged or forced to recover a maximum percentage of the mineral if wasteful methods were penalized by taxation.¹⁹

In discussing the separation of state and local revenues the Commission of Inquiry into Taxation in Michigan in 1911 advised that "mining corporations should not, through separation, be exempted from the burden of state taxation, and a part of the state revenues should be realized from the mines." The commission recommended further that, in the case of separation, "for the present an amount equal to one-ninth of the demands of the state for general expenses be imposed upon mining property."²⁰

Mr. C. M. Zander, a member of the Arizona State Tax Commission, favored taxing mines as other property upon an ad valorem basis. He believes the Michigan system can be adapted and declares the only administrative difficulty in the West to be "lack of power by a central authority. As soon as some western state delegates that power a great advance can be looked for."²¹

On the other hand his associate, Mr. P. J. Miller, advocated as strongly the taxation of mines upon the basis of gross and net earnings. His recommendations in the report of the Tax Commissioners were as follows:

"That a specific tax law be enacted similar to the one passed by the last legislature except that the net proceeds alone be made the basic factor and increasing the multiple from four to whatever figure the legislature may think proper.

"That by eliminating the tax on the gross proceeds and fixing a minimum net of twenty-five thousand dollars for the producing mines will put the larger properties in a class by themselves and tend for equity in assessments between them. This will also prevent properties that are valuable but are making but a small net, from being assessed at almost nothing, as was possible under the present law.

"That all surface ground of mining claims lying within the corporate limits of cities or towns, whether used for mining or other purposes, be assessed as other real estate is assessed and taxed in said cities or towns.

²¹Zander, C. M. Taxation of metalliferous mines. *Proceedings of National Tax Association*, 1914, VIII, 338.

“That all smelters, mills, and reduction works owned and used in connection with any producing mine be included in the value of the mine.

“That in case a producing mine closes down for a period of three months or more on account of litigation, on account of accident, or on account of the depreciation of the value of its product below the cost of production or for any other reason, the State Tax Commission be given power to assess that mine by finding the average of its net for the past five years and multiply that sum by the factor provided in the mine tax law, the resulting amount to be the assessable value of said mine.

“That a section should be included in the mine tax law empowering the State Tax Commission to prescribe a uniform system of accounting for all producing mines in order that the ‘net proceeds’ be arrived at uniformly.”²²

Honorable R. E. Sloan, formerly Governor of Arizona, in an address made before the Conference of Governors in 1910, favored taxing the gross and not the net proceeds, as being less inquisitorial and as eliminating all questions of good or bad management.²³

Mr. J. B. Phillips stated that the Colorado Tax Commission found it necessary to recommend to the legislature the bill changing the assessment of mines, making the assessment on fifty percent of the gross and all of the net from metalliferous mines. This was due to a decision of the Supreme Court defining “gross” which resulted in the reduction of the valuation of the mines of the state by between eight and nine million dollars.²⁴

The Nevada Bullion Tax Agent in 1912 favored a graduated tax on gross output, rather than a tax on net output.²⁵

Mr. C. S. Patterson, of the Utah Board of Commissioners on Revenue and Taxation, recommended in 1912 that mines in Utah be classified and that a higher and graduated rate be applied to property of this class taxed upon net proceeds.²⁶

Mr. T. C. Townsend, formerly identified with the work of the West Virginia Tax Commission, recommended a production tax for oil and gas as follows:

“The most feasible, scientific, and common-sense method of taxing oil is to impose the production tax. The State of West Virginia, as well as all other states and countries that produce oil, ought to come to this tax. The amount should not be great, perhaps one-third to one-half cent per barrel,—and it should be used exclusively for the support of the State government. In oil-producing states this tax would aid largely in bringing about a divorcement of state and local revenues, an end much desired in the tax system of any state. It is thought a production tax could be imposed in most, if not all, states without encountering constitutional barriers.²⁷ A production tax on natural gas is the only feasible method of taxing it under a constitution like that of West Virginia, and the only method that can be devised that will compel this class of property to bear its equal share of the burdens of taxation.”²⁸

In outlining a model system of state and local taxation, Mr. Lawson Purdy proposed that mineral rights should be included among the subjects of state taxation because, “their value does not depend upon local expenditure, or the value of the local government or on the extent of local population. Deposits of coal, iron, and other minerals owe their value to the demand for their use by the country as a whole.”²⁹ He held that the state should receive from rich and profitable mineral deposits a revenue greater than that which would be secured if the state levy were apportioned according to local expenditures. Therefore, the state should tax mineral rights directly. Ordinarily a state tax on mineral rights should not be imposed upon the site value of the land, because the surface can be used for agriculture or other purposes, while mining is going on beneath the surface. In some cases the deposits of ore are so close to the surface that the operation of mining the ore is like quarrying stone. In this case it might not be possible to allow the local community to tax the site at all, and provision might be made for a division of the proceeds of a tax on the mineral rights. With the exception of such mines as are practically quarries, the tax for state purposes

²⁷*Ibid.*, 1908, II, 407.

²⁸*Ibid.*, II, 409.

²⁹Purdy, Lawson. Outline of a model system of state and local taxation. *Ibid.*, 1907, I, 63.

could be imposed on the mineral rights alone, and the local tax districts could be allowed to tax the surface for local purposes.

The Committee on Taxation of Mines and Mineral Lands in its report to the National Tax Association, in 1913, recommended (1) the valuation of explored and developed mines as other property, and (2) indorsed in general the system employed in Michigan, Minnesota, and Wisconsin. The Committee opposed (1) gross and net methods of taxation and (2) taxes on the basis of market value of stocks.³⁰

ECONOMISTS.

Dr. L. C. Gray holds that, "a tax on the mine will in no way affect the supply of the product placed on the market at present" but it may disturb the relation between present and future. Much depends on the manner in which the tax is applied. An annual tax on the value of the mine, provided the tax is expected to be permanent, "will increase the tendency for the mine owner to remove the coal in the present rather than in the future. This will be true even if all so-called rent and a part of the royalty is taken by the tax. Far from preventing the mine from being utilized, it will actually increase the amount of coal placed on the market; and, if demand is constant, will probably lower the price." A tax upon the annual surplus will not have this effect but will "take a certain share of each dollar of surplus whenever it appears."³¹ A tonnage tax at a fixed amount per ton will probably encourage a slower rate of utilization, depending upon the present value of the product.

Dr. Frank L. McVey in an address on a "rational system of taxing natural resources" said, "Without question, the general property tax, as it now stands upon the statute books of the different states, does not meet in any one sense of the term the general economic conditions and the special needs of mining. The same principle which is applied in the case of timber lands, namely, the taxation of the product, should be applied to the taxation of mineral properties. There is no question that the easiest way, and the most satisfactory and acceptable way to all concerned, is a tonnage tax, varying possibly with the character of the ore and the cost of mining, but always depending for the rate and the amount upon the ore that has been mined. The

³⁰*Ibid.*, 1913, VII, 387.

³¹Gray, L. C. Rent under the assumption of exhaustibility. *Quarterly Journal of Economics*, 1914, XXVIII, 466.

taxation of the surface upon some such basis as that seen in the case of the timber tax will provide a regular income supplemented by the amount of the tonnage taxes. The real essence of the tonnage tax lies in the fact that value found in the ground is distinctly a product of nature, which an ad valorem tax can not recognize, and in consequence the state's right to a share of the value of the earth's products, together with the diminishing value element involved, is overlooked.'³²

It has been suggested that the tax rates upon certain kinds of mineral properties shall be progressive. Professor F. W. Taussig in making a general statement regarding progressive taxation says it "is not practicable on the basis of the kind of income. It is susceptible of application, on a wide scale, only with reference to the amount of the income."³³

In discussing unearned increment as applied to mines, Professor Taussig suggested that "it is difficult to see how any other method than that of long leases could secure the desired ends,—the effective utilization of resources and the conservance of the public's fundamental equity. The uncertainties of mining are such that any recurrent carving out of economic rent is quite impracticable. The only feasible policy would be that of allowing private enterprise to take its risks and reap its rewards over a stated period. No doubt the possessor or tenant during his term would be tempted to work the mine to the utmost and perhaps exhaust it; a difficulty possibly to be met by requiring the payment of a progressive royalty as a large output was reached. Here as elsewhere, occasional great gains to lucky or shrewd investors must be accepted with equanimity; a policy too grasping overreaches itself."³⁴

From the foregoing expressions of Professor Taussig it is apparent that a policy of distinguishing the income of mines from income derived from other sources and taxing the mining income under progressive rates is a questionable practice. Similarly, the suggestion that mines be singled out and taxed upon unearned increment is not favored by Professor Taussig and a number of other economists.

In discussing the fiscal policy and mineral deposits, Professor H. C. Adams says, "Mines that are widely spread and

³²*Quarterly Journal of University of North Dakota*, Jan., 1911, pp. 146-151.

³³Taussig, F. W. *Principles of Economics*, II, 484.

³⁴*Ibid.*, II, 101.

easily discovered may be treated like the property of ordinary industries. No special financial policy is required for minerals like coal, iron, or salt. Mines, on the other hand, which form the basis of a natural monopoly should be handed over to private enterprise for development, but they should at the same time be recognized as a fit object for special³⁵ and peculiar taxation.’’³⁶

A corporation tax is favored by Professor Adams in order to reach such differential profit as may result from natural monopoly or specially rich deposits.³⁷ The basis of this taxation should be the royalty which “particularizes itself” with the mineral industry.³⁸ Natural monopolies, such as mines, should be the object of state taxation.³⁹

In discussing the division between state and local taxation, Professor I. A. Loos favors state taxation of mineral rights. “On the basis of economic analysis, as well as in the light of historical public policy, the community has a large claim upon mineral deposits.”⁴⁰ He suggests that, in the states in which important mineral deposits are situated, there be undertaken “legal and constitutional methods of approach to this source of revenue.”

Professor O. D. Skelton, of Queen’s University, Kingston, Ontario, advises that mineral resources should be reserved for state rather than local taxation.⁴¹ If adequate taxes were imposed on mines by a municipality, more revenue would often be raised than is legitimately required. Regarding the appraisal of mining property he comments as follows: “Any estimate of the value of the minerals in the ground must, it is felt, contain a large element of guess-work, diligent and scientific guess-work it may be, but guess-work still.” He therefore prefers a tax on the output or net profit on account of its greater certainty. In his opinion a satisfactory and more or less uniform system of accounting can be enforced so that the principal objections to a net profits tax can be overcome.

³⁵Discriminatory legislation would be unconstitutional in most of the important mining states.

⁴¹Skelton, O. D. The taxation of mineral resources in Canada. *Ibid.*, 1908, II, 385.

Professor T. S. Adams in discussing the practical problems of taxation said: "There is one fundamental principle that men of the technical type particularly forget, and that is that taxes on mines must in some way be equated with the burden of taxation resting upon other property. The general system of taxation under which we exist is a property tax, not an income tax, and the burden of property taxes, if translated into terms of income taxation requires rates so excessive that the ordinary legislature will not impose them. If the burden of property taxation is to be translated into product or income taxes, then the average mine owner must be educated up to endorse and accept a rate of income taxation far beyond anything which he has heretofore considered."⁴²

Professor Seligman, in advocating a tax on income rather than a tax on property, said: "Let us recognize the fact, once and for all, that a system of property taxation, except in so far as certain forms of real estate are concerned, is unsuited to modern economic conditions as the ordinary and principal source of revenue, however strong the arguments may be for its utilization in exceptional crises as during the present European conflict. Let us boldly face the situation and confess that while a classified property tax may constitute the only possible step in advance for those states that are still tied up by a rigid constitution, the scheme is inapplicable to, or undesirable for, those states which are more fortunately situated from the constitutional point of view; and that even in the former class of states the energy that is being developed in the promotion of a classical property tax might more profitably be directed to what is at all events a more thorough-going remedy. What then is this better remedy and what is the next step for states like New York? I have no hesitation at the present time in answering: the substitution of income for property as the basis for taxation."⁴³

SINGLE TAX PROGRAM.

It is claimed by the advocates of the single tax that taxation of land values "will open up the mineral resources of the country to capital and labor. By stimulating the demand for labor and undermining the power of monopoly to hold mineral lands out of use, or close mines, it will lead to an enhancement of the wage rate. By stimulating production and operating to reduce roy-

⁴²*Proceedings of National Tax Association*, 1913, VII, 409.

⁴³*Proceedings of National Tax Association*, 1915, IX, 134.

alties, it will, at the expense of the monopolist, cheapen the commodity produced. It will furnish the state with revenue, with which to unburden industry." An illustration is cited of an English coal mine which mined 846,642 tons of coal in a given year. The company paid taxes amounting to \$27,490. The land owner who received the royalties paid \$4,250 in income tax. If the royalties be capitalized at 4 percent and taxed at the prevalent rate, the tax would be \$17,200 instead of \$4,250. It is claimed that "such an impost would place the state in a position to substantially relieve the mining industry of present rate burdens, thus giving a further stimulus to legitimate enterprise."⁴⁴

The single tax program in America is presented in the writings of Mr. E. B. Kirby⁴⁵ and Mr. R. B. Brinsmade.⁴⁶ The principal suggestion of this program is that a separate tax levy should be made on mineral land and improvements, and that the former should then be increased and the latter diminished until speculative holders are obliged either to sell or to operate. Mr. Kirby objects to the plan of taxing successful mining operations and exempting unprofitable mines and points out the effects of applying the same principle to other forms of property in those states in which mines are taxed on this basis. In discussing the problem of valuing mines for taxation he notes that "value is a market fact, and not what some one thinks it ought to be." He suggests that the most important means of securing accuracy and fairness in assessment of mines is publicity, "letting every man know what his neighbor pays."

"The scientific principle which is now forcing its way into the taxation systems of civilized countries is that the burden must be carried not by productive industry, as at present, but by natural resources. The effect of this upon mining would be to stimulate the active operations of exploration, discovery, and production and to discourage speculative holding of unused mineral land."⁴⁷ The taxes upon operating mines would be greatly re-

⁴⁷Kirby, E. B. *Public*, XVI, 714.

duced and eventually all taxes upon machinery, equipment, improvements, or production would cease and the only tax remaining would be that upon the value of the land on which the mines are located. In the opinion of Mr. Kirby, this will encourage prospecting and the development and operation of mines. The extent of the speculative holdings of mineral land is so great that it is believed the state would secure adequate revenue by shifting the tax burden to such lands.

Similar ideas have been advanced by Mr. Brinsmade and the suggestion is made that mine operators should assess their own property with the understanding that the state may purchase it within a year at the assessed value.

Mr. C. B. Fillebrown urges that monopolies and special privileges should properly share with land values the burden of taxation and cites particularly natural resources privately owned, such as gold, silver, copper, iron, and coal mines, and oil fields.⁴⁸ Similar views are held by Mr. T. G. Shearman.⁴⁹

CONCLUSIONS.

It is evident that the taxation of mines as conducted in several states has aimed at more than the raising of revenue for immediate public needs. The conclusions presented herewith have been reached under the presumption that taxes upon mines are levied for the single purpose of providing public revenue. However important government regulation of the use of mineral resources may be, it has not been considered as the controlling purpose in taxation or the purpose that makes taxation necessary.

It has been deemed inadvisable in this study to attempt to present a program of mine taxation that would not fit into the general methods of taxation now employed in the states, for it is possible that the system of taxation that is ideal from the viewpoint of the mining industry would be entirely impractical for other industries or unconstitutional in many of the states.

It is difficult to answer the general question "Are mines paying their share of the taxes?" It has been pointed out in specific instances that from the data available it may be inferred that certain types of mining property are not paying their share of the taxes collected for state and local purposes.⁵⁰ In most of the im-

⁴⁸Fillebrown, C. B. *The A. B. C. of Taxation*. N. Y., 1909.

⁴⁹Shearman, T. G. *Natural Taxation*. N. Y., 1898.

⁵⁰*Supra*, p. 224.

portant petroleum producing states the petroleum wells are paying in taxes a smaller percentage of their earnings than are the coal and ore mines. In a number of the western states the percentage of net earnings paid in taxes by the precious metal mines is much less than the percentage paid by the Lake Superior copper and iron mines.

It may be appropriate to note that as a rule the general fiscal policy in the various states is based upon the annual needs and that taxes are levied annually at rates sufficient to meet the expenditures (including interest on bonds) for the current year. According to the general plan, only so much revenue is raised during a particular year as is required for that year. This fiscal plan does not fit in well with what seems to be a convenient and just plan of mine taxation, namely, that the aggregate taxes paid by a mine during its life should be a fair share of the total earnings of the mine and at the same time a fair share of the total taxes raised during the same period for state and local purposes. During the most profitable years of the mine's operations the total amount of revenue required may be small and the amount of taxes paid by the mine may be proportionately small; while, in the unprofitable years of the mine's operations, and when therefore its appraised valuation is low, the amount of public revenue required may be large. It would be just to consider the entire life of a mine and in some way to adjust the tax burden to the varying needs of the community. Some of the distinctive characteristics of mining would thus be recognized. The system of taxing property in general upon an ad valorem basis fails to meet this situation, for, as has been noted previously, a mine may partially escape taxation by increasing the annual output and thus rapidly exhausting the mineral deposit so that the number of years during which the mine is subject to taxation is reduced.

As previously noted the constitutions of some of the states limit or prescribe the method of taxation. While the constitutions of several states have been amended in order to permit special methods of taxing mines, the difficulty of amending a state constitution is so great in some instances that a program of taxing mines that would require the amending of a state constitution is not presented.

It is suggested in general that the tax system should be designed so that:

1. The taxes levied upon the mining industry will be no heavier than those levied upon other industries.

2. The methods of administration will be no more inquisitorial in relation to mining than in relation to other industries.

3. Systematic exploration and development, efficient operation, and production of the maximum total tonnage from each deposit will be encouraged.

4. Proper cognizance will be taken of the fact that mine openings, buildings, and much equipment have value only when there is a mineral deposit available for working and that the equipment and openings practically become of no value after such a deposit has been worked out.

The essential differences between the systems of taxing mines now employed in the states have been presented and in review it may be noted that:

1. The general property tax is not adapted to mines and mineral lands unless they are valued by competent appraisers, preferably under state supervision.

2. The gross receipts tax does not secure equality and justice.

3. The net receipts tax may be desirable in the form of a state income tax applying to all property. The accounting should be regulated by state officers, preferably under civil service. The Wisconsin system of taxing incomes is recommended.

4. Tonnage taxes are unequal and unjust.

5. The statutory definitions of real estate and of personal property should be specific and definite enough to include all forms of mining property and all rights appertaining to mines, such as mineral lands, mining rights, leaseholds, plant, equipment, improvements, broken ore⁵¹ or stored mineral, and royalties.

The important questions attracting the attention of the tax officials and mine operators are notably the following:

1. What mining property shall be taxed?

2. Who shall tax it?

3. How shall it be taxed?

⁵¹The distinction between ore in place and mined ore has been made in certain states. Few states have actually carried out fully the distinction that ore as soon as broken and while remaining underground becomes personal property. It would apparently work a hardship on a number of large mines that store underground immense quantities of broken mineral if this material was taxed annually as personal property at its full market value. Apparently no state has yet passed upon this important question, although the courts have held that broken mineral underground is personal property.

4. How shall it be valued? and
5. At what rate shall it be taxed?

1. The conclusion that has been reached, after an investigation of the data at hand, is that all forms of mining property should be taxed according to their true present value. The practice of exempting mines from taxation does not tend, in the long run, to make the mining industry an asset to the community.

2. The question as to whether mines should be the subject of state taxation alone or of both state and local taxation has aroused much discussion. The weight of opinion seems to be in favor of the latter but with the rate of local taxation limited by state law.⁵² If the local units are not permitted to tax mines, many mining districts would not be able to secure adequate public revenue without imposing an unjust burden upon the owners of other property in the community.

3. As most of the state constitutions prescribe that taxes upon all property shall be uniform, the general property tax has been employed extensively and is at present the prevailing method, in fact, under existing conditions, it seems to be the most feasible, just, and economical method of taxing mines and mining property.

4. The foregoing statement is conditioned upon a scientific appraisal by officers working under centralized administration. If all property is appraised at its full value, mines and mineral lands will bear their proper share of the taxes if it is planned that taxes shall be uniform upon all property. Under such a centralized system of appraisal, the accounting problems will be less difficult for the appraiser, the depreciation of mines will be provided for adequately, and the technical problems in general will be less intricate.

It has been urged that special methods of taxation should be provided for the different types of mining property. Particular mention has been made of three types of producing mines, namely, (1) those operating at a profit, (2) those developed but unprofitable, and (3) those being developed. Special methods have been suggested for unproductive mineral property such as (4) property equipped but not being operated, (5) property

⁵²*Supra*, p. 249. • A number of economists favor state taxation of mineral resources and local taxation of the improvements, equipment, and surface rights. Professor Taussig recommends that taxes upon real property be relegated to the local taxing bodies. (*Principles of Economics*, II, 527).

equipped and being operated, (6) property unequipped but explored, and (7) unexplored mineral land. From time to time property of all the types noted is appraised for the purpose of purchase or sale. There is apparently no reason why similar methods of appraisal may not be employed for the purposes of taxation. Under such circumstances there appears to be no valid reason for providing a special method of taxation for these types of mining property.

5. The state constitutions of a number of the states specify that the rate of taxation shall be uniform upon all property. The suggestions that the general tax rate be graduated and applied to mines assessed in an arbitrary manner according to state laws appear to be inadvisable. If mines and all other property are assessed at full value, the rate of taxation should be the same on all property.

If mines are to be taxed upon income, it is suggested that the rate be graduated according to the rate of return upon the cost of the mine or the actual paid-in capital. This suggestion is made upon the assumption that all industries and corporations will be taxed in the same manner. In this way part of the unearned increment will be taken by the state. An income tax which is graduated according to the earnings of a corporation and which does not consider the actual capital invested discriminates in favor of the small corporation or the small mine.

SUMMARY.

Under the presumption that taxes paid upon mines are levied for the single purpose of providing the necessary public revenue, the following principles are advocated:

1. When the state constitution prescribes that taxes shall be uniform upon all property, a centralized system of appraisal, similar to the Michigan plan, is desirable.

2. When the state constitution specifies that taxes shall be uniform upon all property in the same class, all property—including mines and mineral lands—should be appraised at full value, and the taxes upon mines should be equated as nearly as possible with the tax burden upon other property.

3. When the state constitution prescribes no limitations upon taxation, the taxes upon mines should be equated as nearly as possible with the tax burden upon other property. Under these conditions, mines should be valued according to some approved system of appraisal like the Michigan system or, in the

case of short-lived mines, the present value should be estimated according to the ratio between the income of the mine under consideration and that of a mine of the same type which has been regularly inspected and appraised.

4. When the state constitution permits taxes upon income and progressive taxation, the tax should be graduated, not upon total income but upon the percentage of earnings on the cost of the mine or on the paid-in capital of the corporation.

5. Mines should be taxed for both state and local purposes, the local rate being limited by state law.
